Dick's right, and it has nothing to do with inflation, but it requires some background in economics to understand why this is so. Money is fungible, and elastic, each time it changes hands it has an economic effect. I can't give you an economics course in a post, but let me try to give an example which might make things a bit clearer. Lets suppose the government spends 1 million dollars a year in each of two different communities. In one community, it spends the money by giving 500,000 people each $2. In another community it buys 1,000 high tech widgets that cost $1,000 each from a local company. Which will have a bigger impact on the local economy?

You seem to be saying that the two expenditures will have the same effect, but they won't. In the first case, people will buy a hamburger, a pack of smokes, or a bottle of Ripple with their $2 windfall, and that's basically the end of the story. The money is dilute, and goes for basic items with little or no multiplier.

But in the second community the company hires engineers and production staff to make the widgets for the government. Each of those people make good money and buy a house, a car, furniture, a new TV, etc. The contractors building the houses, the car dealers, the furniture makers, etc all hire people to produce and sell these items to them. Those people in turn are able to buy relatively big ticket items too. So the dollars turn over in the economy several times over the course of a year instead of once or twice because the wealth is distributed in larger chunks and can have secondary and tertiary effects in the local economy as it cascades through it during the year.

In high tech high wage areas, the multiplier in the local economy is often seven times or more. You get a "boom town" built up around the high tech industry and the businesses which cater to the workers of that high tech industry. In low tech

low wage areas (ie mill towns, farming areas, etc), or with poverty program giveaways, the multiplier is low, generally less than two, so those areas remain depressed compared to the other town, though the same amount of money has been injected into their economies by the government. The difference is that in the former case the money is in large enough lumps to generate job producing secondary and tertiary economic activity while in the latter case it is so dilute that it has little secondary and tertiary impact (or quickly becomes so concentrated in a few hands, ie the mill owner, the company store, etc, that it can't be spent again fast enough in the local economy to have a major impact).

Economists say that money has "velocity", meaning that it moves through the economy at a certain rate. Money in larger chunks retains its velocity better than money that's finely dispersed. It can be said to have an "inertia" proportional to the size of the chunks. This lets it have a bigger impact at each level as it cascades through the economy. There is a size that is so large that it can't easily make it through the porosity of the local economy, however. In other words, a rich man can only watch so many TVs, drive so many cars, or get so many haircuts. So the multiplier again falls when the chunk size passes a certain limit.

There's a size range where the money will retain maximum velocity in the local economy, and have the largest multiplier effect. This can be calculated fairly closely by econometric models. The peak is roughly when the primary wage generated by the injected capital is in the range of $50,000 to $150,000 a year. That's large enough to spur big ticket purchasing activity, but small enough that the money can easily be spent locally. It also happens to be in the range paid by makers of military hardware, which means that the government's buying of big ticket military goods is a spur to the economy.

It then doesn't matter if the hardware gets parked in a desert, or is sent to the scrapyard, or is shot to the Moon. It has already had its economic impact. What we don't want it to do is to have a civilian use. That puts the government in the market in competition with its own people, and acts as a drag on the economy.

(For example, the government could just buy John Deere tractors, that would spur the economy where they are made just the same as if they were buying M1A tanks, but buying tractors would bid up the market price of tractors for farmers and construction companies, ie supply and demand, so it would have a net negative effect on the overall economy. For maximum stimulus effect without undesired side effects, we want the government to buy things that have no civilian use so that they aren't competitors in the marketplace with civilians for those goods.)

That's also why the government destroyed its old ICBM launchers instead of selling them as cut rate satellite launchers. If they had done that, they'd have depressed the market for new launchers and hurt the economies of the areas where they are produced.

Yes, This is VERY Normal. That's why Kenwood recomends changing the battery
as soon as possible when the low battery condition exists. All thanks to
the wonders of microprocessor controls. I think newer firmwear versions
shut themselfves of automatically. I have had this experiance with both the
G71A and a TH-27A. That's just it. If it happens, take off the battery :)

I have been trying to decide on which mobile to purchase. I'm looking for a dual band that will do channel labels (alphanumeric). I looked at the V7A and wasn't that thrilled with what it offered (display quality), and the FT90 is just too small for me.

I have read information and many comments on the Icom IC2800 but I have not found anything that says it allows you to label the frequencies with alpha tags. If it can, how many characters does it allow?

Also, is this a one-receiver dual band or two? Can it receive a signal on both bands simultaneously? I know it can't do V+V or U+U, but can it do V+U at the same time?

Thanks

Hello , I have a VX-5 forsales. NEW CONDITION It's about 3 months old
a 9Dxxxxxx series ,and I have never had a problem with it.
It didn't do any hardware mods, I just use the Sofeware EVE to mods it. I'm
not use 6 meters at all since there has no 6M repeater.
and the main reason I selling it is I need the money for my school . It's
comes with radio,antenna, box ,manual , case(CSC-73), Rapid desk
charger(CD-15), Mic adapter(CT-44)and
the RS clip on belt clip. I don't want to give it up but
I need to pay by school for next year. I'm asking $349 + shipping.Thanks
you!! Victor iden1000@hotmail.com

14. Re: Running pwr cable thru firewall

Newsgroup: rec.radio.amateur.equipment

Source record: 104695

Another way to run the cable is thru the space between the engine compartment and the outside body, where most build-in radio antennas are mounted.

On my 95 Tacoma, the power cable came in just under the door joint and it was tucked away under the carpet. No scratch and no hole was drilled. You can use a fishing rod or something long and flexible to guide the cord thru the top of the front wheel. I used my 5/8 antenna to do the trick.

Some cars do have that opening sealed off, and you are out of this alternative. Good luck.

Best 73!

as far as I know, wealth is not created or
destroyed, just redistributed. This doesn't feel right, so please
explain.
>
> Question: from whom was Bill Gates' wealth redistributed?
>
> Wealth is most certainly created... ever hear the term "economic growth"?
>

Wealth is most certainly created, and is the driver of economic
growth. One learns this in Economics 101. But wealth is generally not
created, only redistributed, by the Government. What you learn in
Economics 101 is that the accumulation of wealth is not a "zero sum
game", as was (is?) believed by folks of the Socialist and Communist
persuasion. Someone getting rich is not necessarily rich because he has
taken it from someone else. He may have created the wealth, as has
Billy Gates.
Gates has already created as much or more wealth than many of the
previous tycoons, such as Vanderbilt, Carnegie, Rockefeller, etc. And,
this wealth is far more widely dispributed: Microsoft has created over
1000 millionaires. None of this came from taxes, or as redistributions
from Government, but instead it was created in spite of Government
redistribution policies.
It amazes me that this elementary economic concept is not understood
by even many 'educated' people today.

73,
Don, W6JL

17. Heathkit SA-2060 Heavy Duty Antenna Tuner F.S/Trade

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-01 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <377bd48d.13225256@news.hughes.net>
Source record: 104698

Hello All,

I have a Heathkit SA-2060 Antenna Tuner for Sale or Trade.
I covers all HF bands, and it even worked on 6m for me!!!
It does have some minor scratches.
It works 100%. It has a rollar inductor.
It handles up to 2KW.
Has built-in Power/Ref & Forward/SWR meter.
It will tune single wire, balanced/unbalanced feedline, and coax.
The Antenna Tuner has a 3-Selection coax switch for 3 different
antennas.

I am not too sure exactly what this is worth, but I am asking $175
CONUS ONLY!
Or trade.
If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

A picture of the antenna tuner can be found at the following URL:

http://kq6mu.8m.com/pics/sa2060.jpg

Ohhh... This Antenna Tuner does have a position counter on it, and it
needs a plastic wheel replaced inside to make it work again.
I had the little wheel, but the screw inside it stripped the hole and
fell out.

Thanks & 73,

Mike Green KQ6MU
DM04 Palmdale, CA

18. Kenwood 2m All-Mode rig F.S./Trade

Newsgroup: rec.radio.amateur.equipment

Source record: 104699

Hello All,

I have a Kenwood TR-9000 2m All-mode Rig for Sale or Trade.
It works 100% and 8 out of 10 on physical condition.
It has FM/USB/CW/LSB modes.
A PL board was installed.
It comes with a base mic and service manual.
It has memories, RIT, NB, RF Gain knob, Vol
& SQ. knobs, 2 VFOs, and scanning feature.
It has an analog Signal/Power meter.

If you would like to see a picture of the rig that
is real close to this, try this URL:

http://kq6mu.8m.com/pics/9130.jpg

This is the Kenwood TR-9130, which is very close to the
TR-9000, but the TR-9000 has a RED display and
a couple features less than the TR-9130.
The only differnce that I see on the display is that
the TR-9130 has a GREEN display and REVERSE button.

I am looking for $325 for everything or TRADE.

If you are interested in it, please E-mail me or Call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

1.) Buy 76 feet of ground wire
2.) Connect one end to radio.
3.) Connect other end to ground rod.
4.) Cut of Extra Ground wire.

Not being a student of economics, I cannot offer a logical argument, but to me it would appear to me that the wealth that Bill Gates has accumulated and redistributed was not actually created.

His money came from selling products that *he* was responsible for, as opposed to other products, such as food, clothing, cars, televisions etc.

A person has an amount of 'disposable' income and many see fit to spend it in a way that benefits Mr Gates.

I hope this correspondence finds all my fellow hobbists in good health and spirits, Im currently offering a wonderful shortwave radio for sale. Ive been the original owner, and I have to say this unit is very reliabe,versatile,and has never been tampered with. The only reason Im selling it is to raise enough funds to buy an Icom R-7000 wideband receiver.If anyone is interested please feel free to contact me at JJ475171@AOL.COM, and we can discuss a method of payment, Im asking 400.00 dollars U.S. currency, FIRM, its truly a fair price once you see its condition. Thanks for your interest. Frank

Info:

TS-850SAT....purchased new by me. No dings, scratches, etc. Perfect working order and includes all the features the 850 has to offer plus I added the 500 hz CW filter. Never needed the SSB filter due to the magnificant sloper tuning, etc. 100 memories, 10 quick memories, auto tuning, etc. Features, features, features. This rig has not been used the past three years and I finally moved, put up antennas and got back on the air with it. I am in the market for a newer rig, period. For a couple of pictures, visit my site at:
http://www.mcws.net/pat/the850.htm. I will be updating the pictures every few days. This rig is one owner, non smoker, never mobile, never field day, in the original box with all manuals, pieces and parts including extra accessory plug, fuses, etc that came with it new. It is not a rig for someone to buy and resell, it is priced at 1100.00 plus shipping.

I want to sell, but do not have to sell. If you would like more information, please email.

Pat
w4pw

> Not being a student of economics, I cannot offer a logical argument, but to
> me it would appear to me that the wealth that Bill Gates has accumulated and
> redistributed was not actually created.

Ok, the stated premise is that the wealth was redistributed. Bill Gates now has assets of somewhere around $100,000,000,000 - who is now doing without that hundred billion?

> His money came from selling products that *he* was responsible for, as opposed
> to other products, such as food, clothing, cars, televisions etc.

Actually, most of his money didn't come =from= anywhere. In fact, most of his wealth isn't money at all, but calculated by his stock holdings.

Consider Marc Andersson (or whichever variant of the name he uses) of Netscape fame:
He goes to bed the night before Netscape's IPO and really doesn't have a lot of money. The next day, trading opens, and his holdings are suddenly worth tens of millions - nobody gave him any money, but his wealth was suddenly created.

The other thing to consider is that every minute of every day our various mints and the treasury are creating more money - wealth created. (Which creates inflation, btw...)

But we digress. This topic should be moved to one of the economic discussion groups.

Hi Michael,

Mine does the same thing! I have to pull the battery to shut it down.

You would think that Kenwood would make the unit warn the operator of
an impending shutdown sooner while there is still enough charge to
power down.

Message-ID: <377C515E.9B82A1E3@worldnet.att.net>
Source record: 104718

I purchased the Kenwood case, and I am NOT impressed. It does serve the purpose
of protecting the radio from scratches and so on, but with the 5W battery
installed, the fit is poor. The access to the keypad is not too bad with the case
installed. The case wraps around the radio, instead of being a pouch.
The 5W battery, being thicker, prevents the edges of the case from completely
overlapping the velcro areas on the side of the case. Looks cheap!

I have seen the pouch-style case for the TH-G71 in a sales magazine (sorry, I
don't remember which one). I would opt for one of those before Kenwood's.

If you are close to a Kenwood dealer, drop by and test-drive their case before
purchasing it.

If the police dared to try that little piece of footwork they would find
my extremely litigious friend and lawyer all too happy to hit them with
unlawful search and seizure, and perhaps unlawful arrest. I have MARS
and CAP certs and as such the units I posses are inherently capable of
operation on otherwise unlawful bands. This of course places a great
deal of responsibility on my shoulders and I take that very seriously.
They should always check to see if the person has a valid reason for
such equipment. I know the laws where I live and they are superceded by
ANY federal statute and that includes amateur radio licensing and
affiliated certifications. Mere posession of equipment does not warrant
such action but rather a questioning of the person and verification of
sames assertions to lawful posession. How would these police approach
the HF gear which I use for MARS traffic? Not all Pub Service runs on

V/UHF,8/900 trunking, so ALL MARS and CAP mod gear are thereby ulawful to posess if that rational were to be applied. Thankfully there are specific addendums to the law the FCC had the foresight to put in place that removed the local yahoo cops from having free reign over such important matters. Any subsequent rulings would be appealable and almost certain to be dismissed as without merit or overturn in favor of the FEDERAL law having more weight and claim than local.

See the links below for the FEDERAL LAWS regulating these items.

I have a FIST communications 6 meter amp for sale. For 10 watts in you get approximately 100 watts out. Works both ssb and fm. It is a tube type amp, with 2 6je6s in it. It also has a built in power supply. I have used this amp for several years with great results. I am only selling it because I bought a DX70TH which puts out 100 watts. I am asking $125 for the amp. I also have a tentec transverter (2 to 6 meters) for sale for $100

>> be interesting to play with if it there, but disabled...

Not quite, Narrow band FM as we currently refer to now is narrower
than the old 30 kHz FM used in the 1940's 50's and early 60's.

In Europe the FM is narrower than the US. There the maximum deviation
is 2.5 kHz and receiver bandwidth is 8 kHz. They generally use 12.5
kHz channel spacing where we use 15 to 20 kHz channel spacing. The
lower deviation causes less frequency swing and results in a lessor
frequency bandwidth requirement for operation.

Current US amateur FM uses 4.8 kHz deviation with a receiver bandwidth
of 15 kHz.

Recently US Land Mobile frequencies in the UHF band started moving to
a narrow band FM, the result will finally be twice as many voice
frequencies as we know now. This will allow for 12.5 kHz channel
spacing, something the current amateur band radios will not do due to
the wider receiver filters. However there are trade offs, effective
range and fidelity are sacrificed. Later in a few years this is going
to change to 6.25 kHz channel spacing with 1.5 kHz maximum deviation
using current modulation technology. I suspect then the modulation
will be some digital technique to accommodate the range and fidelity
requirements of good two way radio operation.

Good Luck - I hope you find it. YEASU was big on 'modifiable' ham rigs for the big 11 meters since the sunspot peak in the late 70's. The FT-101 was a classic. Been a ham since around before that and have never bought any yeasu gear because of that and never will. They were picking the big bucks up on selling ham transceviers to CB Freebanders with easy mod instructions included.

Boycott Yeasu -- hope you turn that freebander CB crap back into a real radio.

I don't see much purpose in a 1KW VHF amp. I know one op that has a 200W amp that almost never uses it past 135W. I have 2 mobile VHF-FM radios that only hit their 50W high power setting rarely. The 10-15W setting usually hits all of the machines around the area. If you are using FM it is usually "line-of-sight" propagation and even if there is a "band opening" the extra power won't make that much difference. If you are using SSB it would make a little difference... mostly in areas where your signal is weak - and the guy with 200W on the other end won't be able to get back to you anyway. One MAJOR thing to check is the power rating on your antenna. I just flipped through a catalog listing antennas from several manufacturers and very few were rated for 1KW.

Hello again all,

Yes, there has been loads of activity on the homepage. I have recently added an FM narrow-band RX that is about the size of a cigarette packet and has space to add prototype circuits, such as R/C of models, AF amplifier, data decoders, etc. the set is ideal for HF FSK and will work on any frequency up to 100MHz or more. Naturally there is a PCB layout and component overlay to download and the project is well photographed.

Following many requests I have also added info on building an antenna tuner with a few hints on other methods. Forgive me for not taking this subject so seriously, but all the info is accurate, complete with photograph. Do not be put off by chapter titles such as "ADDING KNOBS" but I feel an ATU/ASTU/ASCTU is a waste of effort on 90% of cases.

The technical message board has seen loads of activity about all aspects, including whether the Reflux still should have the coolant fed to the reflux condenser or the final stage alcohol condenser first. What are your views? I think it is a bit like asking whether the propellor should be mounted at the back of the aeroplane pushing or at the front pulling. Whichever way the still works fine and produced some high-grade alcohol.

The electronic calculator was extended a few weeks ago, thanks to the HTML advice received from another newsgroup. Now that i can handle square-roots I have added frequency and coil-winding calculations to the tables.

I have also received loads of E-mail asking how I draw my circuits and PCB foil patterns. there is a page there with examples that explain everything, right down to the keyboard keys to push. Do not expect any high-tech answers because it is very basic and simple. No software, No code, No preaching about products. you have all the software you need in you basic computer.

Well, there is the latest news, sorry there is not too much of it at the moment. Best regards from Harry

> Anyone else have any suggestions?

Yes, loads of them, I live in Sweden where one just pays and pays (and pays and pays ..) when companies charge what they like. It costs $10 just to change an International Money Order in a bank over here! Ok, component suppliers "on-Line":

The only one I really trust on-line in the USA is AES at http://www.tubesandmore.com They have loads of tubes and stuff for antique radio. They are also a goldmine for the constructor.

One basic problem with other suppliers is that many others are cheap but for the personal touch then you have to pay $15 minimum postage (and I also get hit with customs too!). Bardwells in the UK at http://www.bardwells.co.uk/ also have a cat on-line and they accept VISA cards. The components are ridiculously cheap and they will usually write "GIFT" and "HAPPY BIRTHDAY" on the package (for customs).

Then there is Maplin Electronics also in the UK at http.//www.maplin.co.uk and they have loads of stuff on line, and their postal charges start at $7.5 Not nearly as cheap a Bardwells, but they have a wider variety.

If I come accross any more decent suppliers myself I will post them to http://hem2.passagen.se/sm0vpo/info/supply.htm along with those listed above.

Thank you for reading this.

Well, it was a 'fest impulse buy. Now I what I really want to save for
is a spectrum analyzer.

This HT is perfect, perfect. I have all the manuals, cards etc.
Charger, box, nicad pack except the main box. My wife decided I had too
many empty boxes in my office and decided to "help".

Anyway, $110 plus ship and its yours.

Found a Motorola Spriit Radio MV11C model #P23SR..... It's in really good shape, is VHF user programable up to 9 preprogrammed frequencies and 36 codes for code squelch. Battery looks new and has belt clip. Not sure what these go for yet but looking. I think this is a 2watt radio. Not sure though. 7.2v batt. I will sell for 65 shipped. I imagine these go for about 140 - 160 guessing? Thanks, Scott

Certainly, wealth is created daily... If it were not then the increased billions of population alive today who were not alive four thousand years ago would never see a single dollar in their entire lifetimes, nor would they have even a scrap of cloth to cover their nakedness... Yet, we have the most wealth in circulation today that we have had in 4000 years of recorded history...

Guess it depends on how ya look at it! THERE is NO real backing for the earthly things we so covet including "money". The ONLY backing for the paper money we circulate today is our belief that it WILL buy something tommorrow! Period.... How long in our present state of affairs will it last? Sparks my two cents worth...

I have the chance to pick up a nice 7 foot dish. Since my
10 footer is working fine I don't really need it but I thought
there may be some other way to use it.
What other uses for a dish are there? Does anyone do
geosynchronous weather satellite reception? Amateur
radio astronomy? What about full azamuth and elevation mounts?
Any web sites?

A good friend of mine who unfortunately is now a silent key, actually tuned
a 10ft dish up on 70cm for use as a directional link antenna for his
repeater.
The antenna is no longer in use, but to this day we haven't found a yagi
that could compete with it...

Source record: 104638

On 01 Jul 1999 15:48:00 GMT, javnaim@aol.com (JAvnaim) wrotf:

>Does anyone know how to crossband repeat with the Icom 2800H? Thanks
>
>Jordan
>KG4DLZ

Set up the desired frequencies.

Press BOTH Main buttons at the top of the display and the CHG/L button
all for about 1 second until the " Lock " indication is flashing.

The IC-2800H is now in cross band repeater mode.

To revert to normal press and hold the CHG/L button for about a second
or two until the " Lock " indication goes off screen.

The IC-2800H also can use the UT-49 DTMF decoder and the command set
is like the IC-2410 IC-2700H radios were.

Have Fun ! :)

NO bug and No mod required as it normally does not do that.

The electrolytic caps in the DC to DC converter in the small metal box
within the IC-2KL are dried out and require replacing.

Hi,

I have the following excess gear. I can provide further info to anyone interested.

General Radio Rack Mount Power Supply and Oscillator
(1203-B Power supply 1215-B Oscillator)

2 DX 400 realistic sw portables - need repair

6 equotox gas detectors with batteries and 5 chargers
(Some Batteries need replacing, Need recalibration, latest calibration date 1997)

3 GE MPX handhelds, 2 batteries, 2 chargers (UHF)
(Batteries won't keep a charge, One Charger Inop)

2 motorola ht500 HTs, 2 chargers, 4 batteries

Lafayette he35 6m rig with lafayette hand mic and power cable
(Meter not original)

Lafayette he45 6m am rig with manual and power cord

2 Gonset Communicator III with ac power cords

1 Gonset GC-105 2m AM with ac power cord

Unimetrics multi-band portable with DF rotating antenna

2 Multiband portables with rotating df antenna Radio Shack 12-649 equiv

Precise 630 RF-AF and TV Marker and Bar Generator
Needs to be re-capped

3 Plectron VHF Hiband monitor receivers (R8200 series)

1 Plectron VHF Loband monitor receiver

Houston instrument Pen Plotter Model DMP-29
(can't find drivers)

Hitachi Hicomscann graphics tablet Model HDG1111B
(Cant find drivers)

VHF Marine Band Radios
Various; mostly xtal rigs- good for rf parts

Also have various relays and industrial control items including
TDR's (time delay relays) PLDs by Watlow, variable frequency
ac controllers with options (NIB), Allen Bradley programming terminal
with keyboard templates, Large quantity of plug in relays and some sockets.

Interested in monitoring gear, PIC or BASIC stamp items, antenna tuner to
use
with DX70T Alinco, Working solid state test gear, digital camera, scanners,
SWL receivers, most anything electronic that pertains to ham radio or
monitoring.

Sorry for the brevity in the listing, I am trying to conserve a little
bandwidth and
loading time for the NGs.

Thanks for Reading,

David KD4NUE

No it's not. The software mod will alow the rig to tune from 0 to 900 plus but the receiver front end won't handle it. Police, WX, 2 meters and aircraft is about it. You can copy 220 if you stand next to someone.

Stanley,
I think Mark is talking about EVE programming software that is posted
on the
Internet.

Mark,
I don't know of any dealer that sells just the interface cable. It
is the same
one that you would get if you bought ADMS-1E from Yaesu. You might ask
yourself
"Why buy ADMS software when the software I want to use is EVE?". Here's
my
opinion:
a) If modifying your VX-5R is something you want to do, then buying
ADMS just for
the interface cable to use EVE is well worth it.
b) If all you want to do is simply program frequencies into you
radio, then stick
with ADMS and ignore EVE (although it is a really good
alternative).
c) If you're an electronics hobbyist and enjoy building things, then
you can
make your own interface cable using schematics posted on the
Internet.
In any case, Mark, e-mail me and maybe we can discuss what you actually
want to do,
and maybe I can offer you some alternatives.

---Vito

That's the price for the radio alone, but you have to take into account
the prices of the accessories the he want to sell with the radio. From
the list of items in the package, the two extra accessories that
don't normally come with the radio is the spare battery ($69) and the
speaker mic ($30). Add these prices up and than compare that price
with HRO's prices.

Hi All.
I have two Rohde & Schwarz antennas which are surplus to requirements,
One is a HK 001 Uhf coaxial dipole covering 225 - 400Mhz Military antenna.
The other one is a HA 64 Vhf coaxial dipole covering 108 - 162Mhz Civil
airband antenna.
The HK 001 is still in production and retails at ?644-00. These antennas
have never been used and are as new. Open to offers.

Regards Bill.

A TS-930 I acquired a few months ago (2 mil ser#)
seems very deaf below about 3MHz. I've tuned
across the 160 meter band on several occasions
and have never heard a thing. Also, when tuning
across the BCB I cannot even hear a 5KW AM
station only 3 miles away, nor a 50KW station
just 40 miles away. I know the rig probably has
some filtering for BCB rejection, but I think this
problem goes beyond that. I've also done some
BCB DXing using other rigs in the past so, ideally,
I'd like to conditionally bypass any front end
rejection filtering to use the 930 on the BCB. I'd
assume the BCB filtering is done on the PCB
attached to SO-239 connector.

Has anyone had a similar experience?

I have both the service and owner's manuals
for the 930 and quite a bit of test equipment;
can someone give me a starting point on what
I should look for to at least fix the reception
on 160 meters?

Michael,
Do the relays click when to go to those bands? If I where you I would check the relays out in the RF unit in the rig. It sounds like that when you go to those bands It is losing the path between the antenna and IF. Do you have the receiver hiss? If you do I would check for cold solder joints in the RF unit. I have a TS 930. It works but the Digital board is starting to fail. I need another one but don't have the 160 bucs to replace the board right now. A fellow ham in Tucker Ga has 2 versions of this board but it is out of my price range right now. One version offers a computer intface he wanted 260 for that board and the other is the stock board and as I said before he wants 160 for the board. The Kenwood 930 is starting to get some age on it so solder joints might be the first thing i would look at the next thing I would look at would be the relays.

I hope I helped you

John:

It would help if we knew what kind of rig you are running. The amp keys by "grounding" the center pin of the relay phono jack. So if your rig keys the amp then that would suggest that your rig has shorted the connector to ground. You could verify this with an ohmeter.

_IF_ you have a solid state rig (esp an Icom), you may have damaged the transfer relay contacts by welding them together or shorted the output transistor (depends on the model you have). The -140vdc that the SB-220 presents to today's solid state rigs is NOT very solid-state friendly. You should consider installing a "soft-key" mod - either buy the commerical one from Harbach (http://www.harbach.com/) or build your own.

Dave,

You really need to call Icom and get the tech sheet and manual for this rig, as it has an AI interface that allows the rig's options to be used in stages as the operator's needs dictate.

It has a scheme called EASY, and there are 4 stages of complexity that are opened as each letter is eliminated from the lower left of the display; but the functions that the operator chooses to utilize. In the full operational mode, it allows 99 channels and wideband receive. There is also a hardware MARS/CAP mod that requires removing a SMT diode pack and placing it over an adjacent set of pads that are blank and waiting for it. I would advise that you research this mod and get a new diode Pack from Icom at the same time you request a manual, as it can be easily damaged. I
managed to reuse mine, but I think it was mere providence that allowed it's reuse.

I recently parted with mine, or I would be more specific, and the mod book that I finanly found an accounting of the mars/cap mod is loaned out; out of state. It was the volume(s) 6a and 6b that listed this mod.......

Also, you will want to carefully open the rig and strip it to the fron case and drill a
small hole, that is the sise of the indentations on the front; directly over the mic element. This will allow good audio quality, as the original design used vibration of the case to transfer audio to the mic. This mod (if not already done) will turn this rig into a solid performer as far as audio quality is concerned.

Hope this info is helpful for you and others with this rig....

I have for sale an Icom U-16. I recently recased the radio in a new body, so the radio is a 10 on presentation, and works as good as it did from the day it was purchased.

Specs:

*16 Channel Land Mobile Radio (works great on Ham Bands too)
* Field Programmable (37 CTCSS {or PL} Tones), ODD split capable
* 5 Watt Output
* 430~485 Mhz. Model (Radio can be programmed down to 410, and up to 496 but does not recieve well)
* Great sensetivity, selectivity and an all around performer
* Very rugged transportable radio

Accessories:

* Users Manual (Great Shape)
* Programmers Manual (Great Shape)
* Service Manual (Excellent Shape)
* Battery Wall Charger (OEM Overnight Charger)
* Extra Battery
* AA Battery Pack
* ?? I think I have a battery eliminator Cigarette Lighter Plug for it too (I'll throw that in as well)

Asking $225...

I live in Eastern Bucks County (between Philly and Trenton), if you are interested in seeing it, please let me know.

Buyer pays $10, toward insured shipping. CONUS Only please.

119. HF mobile shootout ?

I just reread the Sept. 1995 article in QST about the HF mobile shootout comparing various HF mobile antennas. I was surprised to find that the BB3 placed 2 and 3 in that limited competition. I'd like to know if anyone has done a "shootout" comparing the BB3 and the High Sierra. The two antennas are very similar and I'd be very interested to know if one has a substantial edge over the other.

Hi Lloyd,

Tnx fer ur response. I was somewhat suprised wen I saw your response.
While the HS certainly seems like a more professionally made product, the
consensus thinking seems to be that the BB3 will xmit a stronger signal.
The reason for this is supposed to be because the HS uses stainless steel
to make the contact between the wiper and the coil, and the BB3 uses copper.
Because of the fact that HF mobile antennas present a very low impedance
at freqs in the 75 meter band the belief is that the copper connection
has a much lower resistance than the SS connection.

I'm curious to know what type of comparison you
did?

Hi All
Excuse me but 2m ssb/cw is VERY useable "beyond line of site". 1 kw on ssb can make the difference on those 1000 mile tropo or aurora openings if you have the receive to go with it. For local (100 to 200 mile) ragchewing I use 160 watts on ssb with great success, the only thing I would reccomend would be that the more aluminum you can put in the air the better off you are. For local fm use I would pick up a cheap mobile rig & a small power supply and put up a decent verticle.
Mark

William Thornhill wrote:
>
> I don't see much purpose in a 1KW VHF amp. I know one op that has a 200W amp that almost never uses it past 135W. I have 2 mobile VHF-FM radios that only hit their 50W high power setting rarely. The 10-15W setting usually hits all of the machines around the area. If you are using FM it is usually "line-of-sight" propagation and even if there is a "band opening" the extra power won't make that much difference. If you are using SSB it would make a little difference... mostly in areas where your signal is weak - and the guy with 200W on the other end won't be able to get back to you anyway. One MAJOR thing to check is the power rating on your antenna. I just flipped through a catalog listing antennas from several manufacturers and very few were rated for 1KW.

Source record: 104724

I was asking the same ?'s you are. I almost bought the thing but it WON'T Dual inband recieve nor can you ONE-WAY crossband repeat. It will repeat but only in the normal way. I like the one-way. That's what I use exclusivly. It does recieve both different bands at the same time but if that's what you want then we would be buying that not so featured Kenwood tm-707 or whatever it is. The tm v7a is a great radio but needs the display changed to a different color in my opinion. They need to work on the visibility during daylight hours. But I still think it's one of the better full featured and easy to operate radios out there. I have 3- tm733's and if it wasn't for the display on the 7a then I would have probably upgraded. Goodluck on your choice. Scott, N0oba

133. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7lh8bn$pij@news.Hawaii.Edu>
Source record: 104726
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

I just purchased an IC-2KL amp to use with my IC-756.
When I turn the amp on I get a noise in the 756 that
is about s7 and is at every 10 kHz interval and travels
across the band. It is on all bands but the strongest on
17 and 20.
Anyone experience this problem and know of a mod to the
2KL to eliminate it.

This is the part that troubles me. I've always suspected that my future retirement hinges on everyone buying in (yuck yuck) on this shared fantasy of wealth. So, is it real, or just a figment?

Certainly there's real value in Microsoft's intellectual property, and in the ore mined from the hills. Where and how are these accounted for in whatever counts these things? Is more currency printed to reflect the value of the software I write, or the book I authored? Or does that wait until the mining company uses it in connection with digging up some more dirt?

Michael.

147. Re: Deaf TS-930

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: KI8IK <KI8IK@yahoo.com>
Message-ID: <377e8677.0@news.provide.net>
Source record: 104541
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Yes, the relays seem to be clicking as I tune across
the bands. I looked at the schematic in the service
manual, but it doesn't seem to have a relay marked
for anything below 1.5MHz. The LPF schematic
shows the relays marked as:

RL-1, RL-2 6.0-10.5MHz
RL-3, RL-4 22-30MHz
RL-5, RL-6 4.0-6.0MHz
RL-7, RL-8 1.5-2.5MHz
RL-9, RL-10 10.5-15.5MHz
RL-11, RL-12 2.5-4.0MHz
RL-13, RL-14 15.5-22MHz

If this is true, there doesn't seem to be a signal path
below 1.5MHz.

151. QST: FT-100 vs. IC-706MkIIG

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: Seth Miller <seth.miller@NO*SPAMworldnet.att.net>
Message-ID: <7lmfbn$c8u$1@bgtnsc01.worldnet.att.net>
Source record: 104545

In the latest QST there is a review of the IC-706MkIIG, and in a comparison with the FT-100 in the concluding paragraphs the reader is warned to 'pay particular attention to test results' in the reviews of the two radios. Rather annoying that they couldn't just state what they mean rather than making such a cryptic comment, but... can someone with access to both reviews comment of any meaningful differences in the specs? The QST comment obviously implies that there is something significant to be noted...

Thanks -

- Seth

Right now, it is because propagation on 6m is on the upswing and they are trying to ride the profit wave with the demand in 6 meter equipment. It is really sad. The reality is, that when 6 m is open, it is really open and when it isn't, no amount of power will do the job. I first got on 6 meters in 1978 (2 solar cycles back). I worked CR9AJ (Macao) from Guam with 3 watts sideband. I received a 40 over S9 report. Torres had my meter pegged and he was running 10 watts into a beam. My antenna was on the back of 240Z and was a Wilson 6/2 meter mobile whip. Now that type of distance may not seem like much, but in November, I worked W2UTH in New York from Guam and I was running my Yaesu FT101EX with the FTV-650B transverter. Not a lot of power there, but I worked 35 states that day and the worst report I got was a 5x7 from N0LL. Unless you are marginal into a 6m FM repeater, I think (IMHO) that an amplifier is a waste of money that could be applied to a good 6m beam antenna.

Sorry for the soap box approach, but I really do work a lot of 6m.

Good reply. Only thing I'd change is that commercially they measure
the discharge time to 1.0v per cell. Ni Cads are rated at 1.25 v per
cell.

Hello All,

I have a Kenwood TR-9000 2m All-Mode
Transceiver for Sale or Trade.
It is 10 out of 10 Working condition and 8 out of
10 Physical condition. It has FM/USB/CW/LSB modes.
It has memories, RIT, NB, RF Gain, Audio & Squelch
knobs, Scanning feature, 2 VFOs, and repeater offsets.
It has an installed PL Board for Repeater useage.
Also, it comes with a base mic and service manual.
I am asking $325 CONUS only please. Or Trade.
If you would like to see a picture of it, check this link out:

http://kq6mu.8m.com/pics/9130.jpg

This is the picture of the TR-9130, which is real close the TR-9000.
The only difference that I noticed was, the TR-9000 has a RED display
and the TR-9130 has a green one, also the TR-9130 has a Reverse
button.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

There is a well known problem with the potting material that goes over
the PLL oscillators. After a few years it becomes conductive and must
be removed piece by piece before the osc. will start working right
again. Did you know about this?

Hi Guys!

Okay, I am making some headway with this little critter!

I figured out the power connectors and was able to test it. It powers up with z88, then goes into the channel display.

I am charging the battery as I type this.

Some questions:

- I recall seeing a site that explained all the little serial number & type info, but I cannot find it for the life of me!

- This is a 10 channel unit. I also seem to recall a simple mod to make it a 16 channel critter. Can anyone point me into the right direction.

- Anyone has docs for this critter? It is an older VHF unit (10 channels wold indicate that I suspect) without the keypad.

- Can I program this in any way myself using the limited keys on the unit or must it be taken/mailed to the local Motorola support center for programming?

If the latter, is it true that I must provide the freqs/offsets and PL's I want to use for local 2m HAM repeaters? (and a few simplex freq's)

- I have TWO antennas for it. A stubby (3-4") and a slightly longer one (6-8"). Both are rubber duckies. Best to use the longer one?

- Altho it is a cute little unit, I think I might get along easier with a more conventional critter. Can someone suggest an approximate resale value of this critter?

It is in good condition basically. No accessories. One battery. Appears to power up fine. Missing on/off volume knob (just the pot shaft). I'd say an 8 out of 10 appearance wise. Two antenna's.

Since I plan to become a Tech No Code shortly (to start), I'd like a decent VHF/UHF HT to start with and work from there.

73 - Ed

164. Re: FS; Yaesu VX-5R Tri-Band HT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: Rick Riverman <rbriver>
Message-ID: <930988738.964.45@news.remarQ.com>
Source record: 104592

The package I had for sale included the following:

* Yaesu VX-5R Triple Band HT $359.95 (page 28 HRO Summer Catalog)
* New FNB-58LI Battery as Spare $69.95 (page 29 HRO Summer Catalog)
* MH-34 Speaker/Microphone $30.95 (page 30 HRO Summer Catalog)

$460.85 (HRO price for this package
is over $440)

Ergo $395 isn't such a bad price after all, especially for the person who bought the radio just a few hours after it was listed.

Cheers,
Rick Riverman

165. Price logic of VHF brick amplifiers

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: Will White <wcw@uswest.net>
Message-ID: <377DE623.1977FEC2@uswest.net>
Source record: 104593
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.marketplace

I am just recently QRV on 6-meters and am somewhat puzzled by the price structure of brick amps for this band. Why is it that for the same input/output, 6M amps cost 30%--50% more than 2M amps? Normally, transistors get more expensive as you go up in frequency. Thus 440 amps are more expensive than 2M amps, but by this logic 6M amps should be *less* than 2M amps. MRF492 and similar transistors for 50 MHz are *much* cheaper, from retail sources like RF Parts etal., than 150 MHz and higher transistors with the same gain. It looks an awful lot like price gouging to me, which is bad enough if it is true, but strange as well, because I can't figure out why amp vendors would do this, for this band. . .

166. Re: HF Rig Advice sought

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: DontDoIt@ImNotHere.com
Message-ID: <377ee6d3.1392682@news.mv.com>
Source record: 104594

Hello Rick, and welcome back to hamming, the best hobby on earth!!!

I recently went through the same thing you are now, and am in the process of purchasing my SECOND rig after returning from a 20 year hiatus.

My advice is to purchase a good used rig, unless you want to be the guy who pays the initial steep depreciation on a new one. There are *plenty* of really nice used rigs out there, and if you shop a bit you can probably find a good value. Here is a list of a few of the sites I used when shopping:

http://www.w6ze.org/For-Sale-Portfolio.html
http://listings.ebay.com/aw/listings/list/category1500/index.html
http://quality-enterprises.com/tcrg/OnlineFest/index.htm
http://www.hamtrader.com/
http://qrz.com/swap/
http://www.eBoneYard.com/
http://www.ring.com/trading/hamradio.htm

These are in no particular order, and vary in usefulness.

You can also visit a site I put up, which has pictures of the front panels of many older Kenwood HF rigs:
http://www.firstname.com/kenwood

I ended up purchasing a used Kenwood 850SAT. Although it doesn't have the DSP, it has everything else. I can add an audio DSP if I want to, but right now I don't see the need (my ears are the best "DSP" around, anyway). The rig sells for approx. $850 to $1100 used, much less expensive than most/all of the rigs you listed as new.

Anyway, best of luck in your search, and hope this info helps.

Regards;

Neil, N1DMA

Source record: 104596

Does anyone have experience with the cases for a Yaesu FT-50 with the FNB-41 battery? I understand that the Yaesu CSC-68 soft case and the LLC-10S leather case is currently available. Are there any alternatives?

I use my FT-50 as a base, mobile and portable handheld transciever, as well as some packet. The main purpose of the case will to protect the FT-50 from scratches and drops when used as a HT. Numeric keypad, PTT and light button access is a must, as well as the mic/ear jack.

Does anyone have positive or negative experiences with the cases for this radio?

Happy Independence Day!

Thanks,
Todd

My guess is supply and demand. The development costs and overhead allocations are the same as the 2m and 440 amps, and the sales numbers are much lower. If this is the case we should see some price lowering with more people getting into this band.

172. Noise from IC-706 & AH-4 in my Truck Help!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: Mark C <mchaous@nwlink.com>
Message-ID: <377E06AD.5D1A@nwlink.com>
Source record: 104600

I purchased a Icom 706MKII and the AH-4 antenna tuner. I have it assembled in my ford F150 pickup. I am getting a 4 s-unit noise into the radio from the fuel pumps. This noise only happens when I connect the control cable from the antenna tuner to the radio. I've narrowed it down to the red lead or power lead from the antenna tuner to the radio.

Does anyone have any suggestions as to what I can do to filter out this noise coming in from the power lead of the tuner?

Thanks for reading thisï¿½..Mark KB7OIDï¿½ï¿½..mchaous@nwlink.com

I replaced the Icom control cable with a shielded one and
grounded one end at the rig end. That got rid of a lot of noise.
But still have various noises which I think come from engine computer.
I haven't figured that out, but it is still useable. My install is in
95 Ford Explorer.

Good luck, Dale

Anybody know how to extend the transmit frequency range on an IC-746?
I'm using one with an SGC-230 autotuner and would like to use it for
monitoring SW broadcast stations. Unfortuately, I can't tune the SGC
tuner without applying RF to it.
Thanks,

Jim

Source record: 104606

Rick,

I recently purchased a rig in this price range, and narrowed the field to the Icom 746 or Yaesu 920. I finally decided on the Icom and have been very pleased with it. It has all the features you mentioned and performs quite well. The only thing missing are adequate I.F. filters, but these can be had from InRad at reasonable cost.

If you can afford a few hundred bucks more the Icom 756 would be an even better choice. But, if you're like me, a few hundred bucks is not pocket change. :-)

73 and welcome back

I just picked up a Repco repeater in excellent con.

I am looking for info on it. It's TX freq is 478.040.
Can this repeater be used for the ham bands with out to much moding?
Also anyone know what's it's worth? I have no manual with it.

Thanks,

Thanks Dale for the suggestion. Your right on track as that's why the
coax doesn't return the noise. It's shelded and grounded well.....

Currency is just one counter used as an exchange medium for trading wealth.
The "money supply" at any given time is the sum of the current deposits in banks
(just numbers in a computer), available lines of credit (again just numbers in a
computer), other liquid assets (ie readily convertible T-bills etc), and currency.
The latter is the smallest, representing less than 10% of the current money
supply at any given moment.

Money, at least US paper currency, is just a form of promissory note. Its
real value is less than 1 cent per bill. But as a counter, it serves in place
of barter to let us trade among ourselves items of value, as do checks,
credit cards, etc. The items of value are the goods and services which
we wish to obtain or have performed, or which we produce or are willing
to perform.

Is wealth real? Well yes, it is as real as anything can be in human terms. It is as real as love, hate, want, envy, and desire. But every price is flexible. The free market sets what we agree to be the value of a good or service at any given moment. Nothing has an absolute value for all time. Goods and services don't, and the counter we use in their stead (money) doesn't either.

Fashions in what is desirable change, circumstances change, the value we assign to things goes up and down. When I'm hungry, a hamburger has more value than when I'm sated. I may value an hour of my time more or less than you do today. Etc. The market averages these things out, but even the average value doesn't stay the same over time. 40 years ago, hoola hoops, coonskin caps, and tailfins had a lot of value. Today they are a drag on the market.

Some things retain a constant value better than others, of course. But even gold and silver swing wildly in value. For many years, I had Coffman's rule of meat. That said that a US made car cost the same, pound for pound, as hamburger. It did from the 1920s through the 1960s, but then government interference in the market drove the price of autos up (CAFE, emissions standards, 5 MPH bumpers, airbags, ie things the average consumer wouldn't choose in a free market), so now autos cost the same as filet mignon, pound for pound. Does that represent a real increase in wealth? I don't think so. Only the free unfettered and uncoerced market can determine true wealth.

The costs of R&D, manufacturing, and distribution of the 6 meter amp are probably about the same as a 2 meter amp, but these costs will have to be recovered over the sale of a lot less units. I don't know what the exact sales figures are, but I would guess that the ratio is around 100:1, maybe greater.

The IC-746 is a much better HF rig. Having multimode 2m and 70 cm
in the same box with HF isn't really an advantage unless you're very
cramped for space, or are primarily interested in VHF/UHF, and just
want a HFcapability thrown in.

> Kenwood:
>
> TS-570SG

(shrug) Not much here to get excited about.

> Yaesu:
>
> FT-847
> FT-920

The 920 is a better HF rig than the 847. The same arguments
that apply to the 746/706 decision apply here too. The 847 *is*
a good multimode for 2m and 70 cm, having HF too is just a
bonus.

>substantial difference.

The 746 and 920 allow you to fit better filters, and have stouter front
ends to handle adjacent strong signals on HF. Both the 706 and 847
crunch in those situations (the 706 worse than the 847). I have both
an IC706 and a FT 847. Neither is my primary HF rig. I chose the 706
for mobile operation because of its compact size and remote head.
It is a good choice for mobile, a less good choice for use on a large

antenna as a main rig at home. I bought the FT847 as a backup rig
to my main HF and VHF and UHF radios. It isn't as good as any one
of them, but it is a viable substitute for all of them if necessary. In fact,
I use it a lot, because it is so handy.

However, I'd echo Neil's suggestion and offer that buying used
equipment might be the better way for you to go. My main station
is an IC735 (about $600 used, an oldie but a goody), an IC275H
(about $800 used), and an IC475H (about $900 used). (The latter
two negate the need for amps on 2m and 70cm since they have
them built in, so they're worth a bit more.) Each of those radios
outperforms my IC706 or FT847 in their particular niches.
(Look good on the desk too.)

The big advantage of separate radios is that you can monitor more
than one band at once. You can be working HF while listening out for
a call from your buddy on VHF. You can work full duplex crossband.
And if one radio dies, you only lose part of your capabilities until it is
fixed. Etc.

However, all that said, if I could only have *one* rig, I believe I'd keep
my FT847. That's just a very handy all around radio. It isn't great on HF,
but it'll do, it isn't the best satellite radio, but it'll do, its an adequate FM
repeater radio (though I'd like dual simultaneous receive), etc. Every
feature is a compromise compared to available separate radios, but
the total package is pretty impressive.

You can thank the FCC for this. External amplifiers capable of operating below
144 MHz have to be Type Accepted (to keep them from easily being modified
for use on CB). That costs money to add the additional features required to pass
Type Acceptance, and to pay for the Type Acceptance testing. Add to that the
lower demand for 6m amps (most of today's 6m rigs are really HF rigs that
already do 100 watts, so an add on amp isn't necessary), and you have a price
premium for 6m amps.

Ford fuel pumps are notorious. Ford has a service bulletin out with a
fix for them. (You want to correct this problem at the source, otherwise
you'll still have it, via the antenna, after you choke it out of the tuner's
DC leads.)

>again. Did you know about this?

I have two TS-440s and have worked on a friend's all have had the PLL
problem. There are a couple of ways to identify that this is the
source of the problem.
The first way is to see whether it works on some bands and not on
others. By bands I mean the frequency ranges that use different
oscillators. You will need a manual to see how they divided the
frequncy range that the radio covers into several smaller ranges that
each VCO covers. If when you cross the line between one VCO's
opearting range and another's it either stops working, or starts
working, then this is a good indication that the goop has become
conductive causing some of the VCOs to no longer work reliably.
The other thing I noticed on mine when it was not working is that
the display seems to work while you are tuning, like the processor is
telling the VCO where to go, and it does not work when you stop
tuning. In either case the receiver does not work, unless you moe to a
frequency range as mentioned above.

This could be a dumb question, but what about the TS-50S, or
one of the other compact/mobile HF rigs? I'm sure there
must be a disadvantage associated with the smaller size, but
I haven't heard talk about it. What's the practical loss of
performance for SSB?

Yep. That makes sense. Why though do Ten Tec and other vendors of 6M gear, kit and W&T, print a note in their ads claiming "FCC rules prohibit sale of external amplifier" for 6M? Puzzling, since you *can* buy 6M amps from TeleTec and Mirage, among others. . .

Generally speaking, the smaller rigs lack features such as builtin antenna tuners and keyers, and the receivers tend to be less robust. For just your basic day-to-day operation there is no practical difference performance wise. It's a different story for contesting, DXing, weak signal work, and other endeavors that tax a rig's performance.

THE POUCH cases are still of excellent quality, and are available at Ham Radio Outlet Stores nationally.

207. Help with TS-440AT

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: Paul Winroth <hpnorka@worldnet.att.net>
Message-ID: <01bec4eb$2a23cae0$688e0b3f@MidOhio.Net.MidOhio>
Source record: 104679

Just wondering if anyone has experienced these problems with an TS-440AT:

1. Digital display completely off except for several decimal points on initial power-up.
2. Long warmup period before radio is functional. (>10 hours)
3. Incorrect frequency display relative to actual. (When display is actually on)
4. Garbled audio (like listening in the wrong sideband mode.)

Probably the processor but I'm just wondering if there is a history of this?

This actually my Dad's radio and he is explaining the problems to me. So they may not be 100% accurate.

Thanks.

Paul

208. Heathkit SA-2060 Heavy Duty Antenna Tuner F.S./Trade

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-03 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <377d589b.27031501@news.hughes.net>
Source record: 104680

Hello All,

I have a Heathkit SA-2060 Antenna Tuner for Sale/Trade.
It works 100% and does have some minor scratches.
It has a Rollar Inductor, the tuner can handle up to 2KW,
accepts Single wire antennas, Balanced/Unbalanced
Feedline, and Coax. It also has a 3-Position Antenna
switch built-in. Also it has Ref/Forward Power Meter
& SWR meter built-in.
I am asking $150 or Trade.
A picture of the antenna tuner can be found at:

http://kq6mu.8m.com/pics/sa2060.jpg

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

Is there an simple way to tell if the repair job has already been completed?
I bought a used 440, which is working fine, and am curious if this has already
been accomplished on my unit. Thanks.

I'd be interested in a few small parts, too, if anyone has some they would part with. I know I can buy new ones from Vibroplex but would prefer to keep it looking about the same overall. The new parts won't have the same knurling patterns and are chrome plated. Mine is a relatively early model and I would like to restore it to functionality. Thanks.

Hi,
Here's what I have for sale:

Icom SM-5 desk microphone. Non Smoker. Looks new. $55+shipping
Icom FL-45 -- narrow cw filter for IC-720/730/740/745. $49+shipping
Icom MB-5 mobile bracket fits IC-730, maybe others NIB. $35+shipping
Icom PS-15 20amp Station Power supply. W/ book. $99+shipping
Diawa MX-200 watt meter. 1.8-200Mhz, 200W, PEP/AVG. $45+shipping
Drake W4 watt meter 1.8-30 Mhz. 200/2000W, nice. $80+shipping
Dentron Jr. Monitor antenna tuner 1.8-60 Mhz. $52+shipping
Kenwood SW-100 watt meter. 1.8-150 Mhz. Remote sensor $50+shipping
Kenwood MC-50 desk mic. Non smoker. Looks nice. $59+shipping

Please email if interested. Thanks.

> DC leads.)
>

Quite right ... and here it is:

RFI noise in Ford vehicles

After installing an HF rig in my 97 Ford Explorer, I was disheartened
to discovea S9+ noise level. The source appears to be the electric
fuel pump. I received some excellent info from other Ford owners and
I now wish to pass along some of that advice here.

Ref: Ford Technical Service Bulletin: 98-7-3
"Fuel system - fuel pump: whining/buzzing noise comes thru 2-way
radio speakers"

Vehicles covered:

Ford
1990-93 Tempo
1990-97 Probe, Thunderbird
1990-98 Escort, Taurus
1990-99 Crown Victoria, Mustang
1997-98 Contour

Lincoln-Mercury
1990-92 Mark VII
1990-93 Topaz
1990-96 Continental
1990-97 Cougar
1990-98 Sable, Town Car
1990-99 Grand Marquis
1991-98 Tracer
1997-98 Mystique
1997-98 Mark VIII

Light Truck
1990 Bronco II
1990-96 Bronco
1990-97 Aerostar, F Super Duty, F-250 HD, F-350
1990-98 Econoline
1990-99 F-150, F-250 LD, Ranger

1991-98 Explorer
1993-98 Villager
1997-98 Expedition, Mountaineer, Windstar
1998 Navigator

The Problem:
Electrical noise on radio speakers caused by in-tank electric
fuel pump.

The Fix:
Installaition of an RFI filter (Part No. F1PZ-18B925-A) on the
fuel pump inside the fuel tank. *Note: some light trucks may require
one RFI on each fuel pump on multi-tank vehicles.

Test Procedure:
Fuel pump radio noise is relatively constant and changes only slightly
with vehicle speed. If the frequency of the noise varies, or the noise
comes and goes with vehicle speed, then it is NOT the fuel pump, and
this fix will not be effective. Use the following procedure to determine
if the fuel pumpis the cause of the radio noise.

1. Turn the radio on.
2. Turn the ignition key to the RUN position, but do NOT start the engine.
3. The fuel pump should run for about 1 second with the key in the RUN
position with the engine not running. Listen for noise in the radio.
If the noise is present while the pump is running, and stops when the
pump stops, then the noise is being generated by the pump and this
procedure should help.

Additional comments:
I purchased by own vehicle "used" from a Ford dealer and also purchased
the extended service plan. However, the service manager told me that this
repair would be done under the BASIC WARRANTY and not by the extended
service plan. For what it's worth, the RFI part costs about $70 and
sometimes takes a week or so to be delivered to the dealership. Other
Ford owners have also told me that this fix was done at no charge to them
as well. So.... if you've got a problem ... perhaps this will help.

Warmest 73,
Sandy W7BX@arrl.net

PS: I did have the filter installed on my '97 Explorer and noticed an
immediate and substantial improvement on 15m; with the use of my noise
blanker, the noise dropped to <S1. On 20m, however, there is still
some substantial noise and I have been advised to properly ground the
antenna to the chassis of the vehicle. For what it's worth, my first
QSO was with JA3CZY on 15m ... so, I guess it works.

Open it up, look at the PLL board, if it has the glue on the parts it's waiting to fail.
(Unless it's NEW hot glue.)
I've fixed a dozen or so so far... my own too!

>
> Nicole KD1UJ

It all becomes subjective interpretation. Its like the tax
codes. Intentionally muddled. Hiding performance truths behind
charts 99% of the audience can't interpret and 99.9% can't
measure in their homes. For multi thousand dollar appliances?

The science required to build and test these for the masses
dictates that the manufacturer can test each unit very well.

But once boxed and shipped (with no reasonable built-in diagnostics that calibrates or
performance checks to any known standard) we rely on
"599" reports over the air and assume no answers to a "CQ" = the band
is dead. How do you detect a problem with a new radio?

Look at a high end audio. Or modern test instrumentation. Much more
demanding specifications that end users can get verified. Most ham
dealers point to a UPS address and relate 6 week turn arounds for
repairs. This after we become convinced the radio is broken. Wonder
how long most are bad before we "discover" something is wrong?

Lemmings?

We should demand built-in diagnostics and performance score cards
anyone can understand. Then the reviews will make sense and the
radios will work to measured standards in the field like they should.

(did someone say irrational RANT?) :-)

>least 10 feet above a structure.

That's not carved in stone. One ham who used to frequent this group made DXCC loading up the awning frame of her trailer. (You might consider trying that.) Naturally, the higher the antenna the better. A low horizontal antenna radiates mostly straight up. But there is still signal going in other directions too.

> Since I live in a mobile, my two thoughts were originally to:
>
> 1. Run a center fed wire around the perimeter of the roof
>(supported by 8" antenna supports to keep it free of the roof itself, of
>course), which would give me a wire loop, open at the ends, about 140'

>allow the antenna to have a "U" shape with the feed to the West and the
>ends--which would, presumably, have some additional directivity--to the
>East). I could also (theoretically) elevate the West end to about 6'
>above the roof height slope to the East ends at 8"-12"

A dipole that folds back on itself suffers some signal cancellation. You might do better not folding the ends around so that they parallel the main part of the dipole. (An 8 inch spacing is really close too. I'd like to see more than that. Even a couple of feet would make a big difference.)

You might also try closing the loop. The current distribution in a loop is different than in a contorted dipole, so it often works better. The more area a loop encloses, the better it works. So you might want to make it more of a square than a skinny rectangle.

> 2. Run a single wire (appx. 60' in length), center fed, either
>straight or angled to about 15 degrees (raised to a max of about 4' at
>the centerfeed point) with the ends of the wire pointing either straight
>E-W, SSE-SSW or NNE-NNW.

That could work Ok. You also might want to try a cranked line.
That's a form of linear loading where the line is crenelated, like
a castle wall. Run the wire a couple of feet horizontally, a couple
of feet vertically up, a couple of feet horizontally, a couple of feet
vertically down, a couple of feet horizontally, ad infinitum. This
makes a short line behave more like a long one, so you can use
a relatively short antenna on the low bands. (You might even
disguise this as a faux crenelation on the roof of your trailer.
Use plywood as a form, and paint it to look like stonework.)

> 3. Use a trap antenna, either something like a G5RV in
>configuration (1) above or a shortened trap antenna in configuration
>(2).

I wouldn't. Trapped antennas aren't likely to work well that close to
a metallic structure, and the G5RV is really only a 20m antenna. It
sort of works on other bands, but a plain balanced feed doublet does
better as a multiband antenna.

> In all cases, of course, I would expect to feed with balanced
>line and use an antenna tuner such as the MFJ-969 to provide a
>"prematch" to the rigs own tuner (assuming that's necessary with an
>FT-920 or an IC-746).

If you use the MFJ tuner, I'd use an external balun rather than the one
built into it. The one in it is a voltage balun, what you want is a current
balun, ie a common mode choke.

> The thing that's kept me from that is the assumption that I had
>to have significant clearance from the building & ground (particularly

>have available. I can "sneak by" with a 6' rise at the West end of the
>building (or half-way along the North side) where the support can be
>somewhat hidden by nearby trees (4' would be better), but that's about
>all I can get away with.

If you have plastic plumbing, you might actually be able to load the
trailer against ground. It might work out Ok too, especially on 40m.
I expect you'd have some "hot shack" problems, however. :-)

> If I'm wrong on the clearance--or if I can use an artificial RF
>ground (i.e., the MFJ-931) to compensate for the clearance--that would
>solve it. Like I said, "antenna illiteracy," which is a bit inexcusable

>code (hearing damage from Vietnam makes it impossible for me to separate
>characters above about 15 wpm--hence the 20 wpm is out) to (finally) get
>an Extra class ticket.

An artificial ground won't do a thing for you. Just stick with center fed antennas
and ground, artificial or real, is irrelevant to how the antenna will load up.

>>If all else fails, get a 30 foot aluminum flag pole, base load
>>it, and fly Old Glory. Call anyone who complains unpatriotic.
>
> No flagpoles permitted. I thought of that one, unfortunately,
>but the ground rules say no.

So they're unpatriotic. (Make noise about that at the association meetings.)

I have a very good condition HTX-202 for sale. Works Great! I have an antenna for it, a microphone. I have two Nicad batteries for it. Both are from "Mr. Nicad", and are approximately 1 year old. They are 7.2 Volts@1700MAH each. I have the quick charger that was also bought with it. I am selling it because it is a backup radio to my Kenwood TH28A. The HTX-202 is not modifiable. The rig puts out 1 watt on "low" and about 5 watts on "high". I also built an HT stand for it out of wood and heavy cardboard. I have a copy of the manual. All this can be yours for $150, plus $5 for shipping anywhere in the world. I am not interested in trades, as the YL is moving in and I need all the room I can find. Greg.

227. TS-60 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-04 00:00:00 UTC
From: Rick Kissell <rkissell@execpc.com>
Message-ID: <7lom78$mrl@newsops.execpc.com>
Source record: 104500

When I fired up my Kenwood TS-60 today, I noticed that after transmitting for a few seconds, the display went from the normal setting (showing frequency, etc.) back to the initial "hello" screen. Simultaneously, it stopped transmitting. The station with whom I was in QSO told me my signal was suddenly shutting off in mid-word.

When I dropped the power down to 50w, the same thing occured, but with a slightly longer transmit time before shut-down. When I dropped to 10w, the transmit time was again extended, but it still eventually shut down (within about half a minute).

This occurs on both SSB and CW. There was no change when I took the rig to another ham's QTH and connected it to his beam.

Any thoughts?

How about printouts of the automated tests that are run by end of line test fixtures at the factory? Some commercial equipment comes with these printouts. Ths makes it very easy to see what was tested and how it performed.

character in the right margin.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

240. Kenwood 2m All-Mode For Sale/Trade

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-04 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <377eb56c.30256058@news.hughes.net>
Source record: 104551

Hello All,

I have a Kenwood TR-9000 2m All-Mode
Transceiver for Sale or Trade.
It is 10 out of 10 Working condition and 8 out of
10 Physical condition. It has FM/USB/CW/LSB modes.
It has memories, RIT, NB, RF Gain, Audio & Squelch
knobs, Scanning feature, 2 VFOs, and repeater offsets.
It has an installed PL Board for Repeater useage.
Also, it comes with a base mic and service manual.
I am asking $325 CONUS only please. Or Trade.
If you would like to see a picture of it, check this link out:

Goto:

http://kq6mu.8m.com/pics/

Then click on the file named: 9130.jpg

This is the picture of the TR-9130, which is real close the TR-9000.
The only difference that I noticed was, the TR-9000 has a RED display
and the TR-9130 has a green one, also the TR-9130 has a Reverse
button.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU
DM04 Palmdale, CA

Yeah, I have the same frustration with QST reviews. Most are puff reviews. They're full of graphs and specs, which tend to tell you almost nothing since almost all modern gear has fully adequate specs, and they're written like fan mail. ("Oooh, gosh, drool, pant, the buttons are light up!") Reading these things, you wonder, is it that QST doesn't dare anger one of their three big advertisers or (more likely, imho) that most of the reviewers are just, well, amateurs, and so in awe of the prospect of (ohmigosh!) writing "for publication" that they just aren't up to the job.

Unfortunately INRAD does offer filters for the FT-100. They get constant inquires but have said that there is just not enough room inside the radio to make filters for it

Hi Guys!

I'd like to thank all those whom quickly replid with alot of GREAT info! I have decided to just sell/trade the unit for a decent HT such as the FT-50 or some other nice 2m/70cm HT/mobile .

Thanks again to all - 73 - Ed

248. FS: Motorola VISAR and Spirit Pro+

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-04 00:00:00 UTC
From: poofbutt@eudoramail.com
Message-ID: <377ff2d3.5703848@news.gte.net>
Source record: 104559
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

Hi Guys!

For sale/trade - Spirit Pro+ - battery is good but no antenna. Not sure what this is worth, so I'll probably just take the first nice offer I get in email.

For sale/trade - Visar - here's the stats:

Model: H05KDD9AA4AN
S/N: 720ATU2606 Z
Type: KDHA
DOC/MDC: 10919310351

Good condition. Battery is bad I think. Would not hold a charge (manually applied by me) on one side of the battery.

Stubby antenna (3/4"). If I can find the other one (6" or so) I'll include it as well.

It has a small scratch on the right middle of the speaker part of the casing. Not rewal noticable but there.

Unit is an 8 out of 10 I would say.

Powers up thru the self test, then goes to the channel.

I'll consdier trades - Yaesu FT-50RD looks nice and easy. Perhaps a nice dual band HT or mobile.

I have a decent idea of the VISAR's value due to checking ebay and corresponding other folks that know about VISAR's.

I'd like to make someone a good deal while getting something I want as well.

Please email if interested or if you have an offer.

Thanks - 73 - Ed

William Thornhill <box@flash.net> wrote in message
news:377B0321.D26EFCBB@flash.net...
> I don't see much purpose in a 1KW VHF amp.

I used to run 600 W FM simplex to stacked 14's at 50 feet on top of a 300 foot hill via 3/4 coax. It worked quite well and made using FM, much like using SSB for long haul. Twas a lot of fun.

> I know one op that has a 200W amp that almost never uses it past 135W. I >have 2 mobile VHF-FM radios that only hit their 50W high power setting >rarely. The 10-15W setting usually hits all of the machines around the area. If >you are using FM it is usually "line-of-sight" propagation

I've found that FM, like SSB and CW is *usually* about 13 to 15 % beyond line of site. And it do make a difference when running power. Much more so when mobile trying to work repeaters. It'd not be adviseable where the repeaters are closely packed, but 50 - 100 Watts works quite nicely for FM mobile in many areas. Particularly if you end up out in wooded country side.

>and even if there is a "band opening" the extra power won't make that much >difference.

That has not been my experience.

>. If you are using SSB it would make a little difference... mostly in >areas >where your signal is weak

It makes pretty much the same difference on SSB as it does FM or CW.

> - and the guy with 200W on the other end >won't be able to get back to you >anyway.

If you are going to go after DX which is pretty much the reason for going high power in VHF in the first place then go all the way and add a low noise antenna mounted (and switched) preamp. 20 db gain up there will help to hear those stations running much less power.

> One MAJOR thing to check is the >power rating on your antenna. I >just >flipped through a catalog listing antennas >from several manufacturers and >very few were rated for 1KW.

A good percentage of the beams are rated for a KW, but not the verticals. Running a KW on a vertical instead of a directive antenna doesn't make a whole lot of sense in most cases.

Ya, I have had to remove all the potting around and under the
capacitors especially, as the material goes conductive causing the
capacitors to look like resistors to the circuitry. This causes the
oscillator to quit. Remove ALL the potting material that you can!
Good luck de Fred... PS. This condition was supposedly caused
by temperature variations from minus to plus and vice versa. Caused
breakdown and chemical change of the potting compound.

Ken Brown wrote:

I can't comment on mods, but I just bought one of these last week. It replaced a dead Kenwood that I had enjoyed for a couple of years. I use it in an area plagued with intermod, and so far I haven't had a problem with that. The signal in and out seems fine. My son has a 2500 that has been a great radio for him, and this radio seems to work just as well. In a couple of months I will have a better idea, but so far so good.

It turns out that the test data ("graphs and specs") does reveal much if
you study it.

Clearly they are not going to malign major advertisers; but the test
tata (and especially the expaned test data .. at their web site if you
are a member) tells much, if you know how to read it.

If you're going to use a mobile type antenna, I'd suggest one of the screwdriver antennas. That'll work much better than one of the antennas using fixed loading and a tuner. Even though the tuner may be able to provide a match outside the very small frequency span where the small fixed tuned verticals operate well, system efficiency will be lower than for the screwdriver.

Alternatively, you might consider a horizontal wire antenna. If you can string 50 feet or more, center feed with balanced line, and use a balanced tuner, you can put out a respectable signal on all the HF bands. Thin wire, and use of existing supports, can make this fairly unobtrusive.

If all else fails, get a 30 foot aluminum flag pole, base load it, and fly Old Glory. Call anyone who complains unpatriotic.

Such ads are misleading. What they're really saying is that the particular
manufacturer doesn't want to go through the Type Acceptance procedure
required to legally sell such an amp.

The FT100 has significantly better 3rd order intercept figures than
the IC706MkIIG. That translates to a less crunch prone receiver.

I've worked two different mobile ops on 40m CW running them QRP and the SGCs seem to hold their own. I asked for their impressions and both ops were both very positive about the SGC receiver. IMHO, both the tone and keying was very good. I cannot comment on other modes.

The only 'negative' comment was from one op regarding the small size of the operating controls, but all the smaller rigs will have the same 'problem'. Ham Fisted Hams may want to keep this in mind.

As to the recent price decrease on the SGCs, maybe a new model is in the wings?

268. SST-40: extended coverage

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-04 00:00:00 UTC
From: kbrosche@aol.com
Message-ID: <19990704095256.23151.00010061@ng-bh1.aol.com>
Source record: 104579

Hi folks:
I refer to the SST-40 kit from Wilderness (QRP 40 m CW TRX).

With the supplied X-tal the frequency coverage with my SST-40
had a lower limit of abt. 7.034 Mc.

As most of the CW activities in Europe take place between 7.000
and 7.030 (QRP), I was looking for ways to lower the frequ. coverage.

My solution:
install second X-tal in parallel to original. I purchased an HC-18
X-tal with a nominal frequ. of 11.000.00 for $1 at a flee market.
Unsoldered the original one. Soldered it to the new one in a kind
of 'Y' configuration. Soldered the new one (still long legs) to the
board (push it down as far as possible, avoid contact to other parts,
and then solder).
Frequ. coverage now is from 7.019 to 7.037. This is good enough
for having lots of fun with the little rig in Region 1 frequ. plan.

This change worked out for my SST-40. It is just a hint of how
I adressed and solved my particular problem. I cannot guarantee
that it will work with your particular rig and X-tal.
72, Klaus, DK3QN

> you study it ...[and] know how to read it.

Yes, of course there's merit to what you say. (Geez! You can't even go off on even a minor irrational rant these days without getting called on it! Sheesh! :) The QST reviews do provide a substantial amount of quantitative data in a format that can be used for some good "apples and apples" comparisons between competitive gear. What I'm criticizing is that it tends to be raw data: you do have to "know how to read it" because they often make a poor effort to explain it in the text and essentially zero effort to present it alongside data for competitive products. It would help, for example, if they simply added tables summarizing how the radio being reviewed ranks against others on some of these measurements they've made.

But also, I did just now happen to pull out the IC-706MKIIG review that started all this and found, to my surprise, that the text to this review does seem to be better than others they've printed (or at least, as I remember them :) and does offer a more useful presentation of pros and cons. But then again, I see this is one of Rick Lindquist's articles and he is one of their best writers.

The only source for the cable I know of is RT Syatems. They also make a commercial software program (ADMS) - that is the only software authorized by Yaesu for your HT.

Their Web site: http://www.rtsars.com

Ham Radio Outlet stores nationally carry the package - about forty dollars for software and cable.

You might also want to check with your local Amateur radio club - odds are that someone there can program your unit for you!

Source record: 104437

I am not currently licensed, but I have a question about radio
communications. If necessary I will get a license, and will always be legal.

If I am hiking and an emergency occurs, can I contact the aircraft that are
passing randomly overhead to arrange for rescue? I saw an internet posting
describing how one hiker carries a small radio, a Standard C108 which he
could use to flag down bush pilots. He has never used it. Another
possibility might be the YAESU VXA-100 Aviator.
What license would need to pursue this capability?

Thanks for any information.

John Hughes

From: pcr@ten.ci
Message-ID: <931198623.642822@newnfs.ic.net>
Source record: 104444

I've got an MFJ-9406 that seems to be deaf. On two different vertical antennas, I seldom get anything but occasional local SSB, and even then it barely makes it out of the noise and doesn't move the meter. Antenna tuner doesn't help any.

Anybody else run into this? Got an easy fix? Or is it time for a trip back to the factory?

Can't answer the equipment questions, but the FCC has always said that no license is required in the event of an emergency. To save life and limb, you can use any communications means at your disposal.

>possibility might be the YAESU VXA-100 Aviator.

To contact an aircraft, you'll need an aviation radio. The Standard may
well tune aviation *frequencies*, but it transmits using FM. Aviation
radio communications are done using AM, so the people in the plane won't
hear any audio even if they can tell that someone is transmitting on that
frequency. To an AM receiver, FM transmissions are just silence.
Your friend may be in for a rude surprise if he expects that radio to
help in an emergency.

Aviation handhelds are available, and they have AM transmitters. The Yaesu
you mention may be one; I'm not familiar with it specifically. Icom also
makes a series of good aviation handhelds, some not terribly expensive (by
aviation standards, anyway).

>What license would need to pursue this capability?

In a true emergency, a licence is not required. For normal use, an aviation
radio is either used in an airplane, in which case it is covered by the
plane's radio licence, or used for aviation-related purposes on the ground,
which require a slightly different licence.

Dave

I remember those. I wanted one when they first came out (never mind that the performance wasn't very good). But they cost a bit too much then (about a third what you're asking now), so I didn't buy one. Cute radio for its time, but a Drake 2B would beat it silly in terms of performance, and wasn't that much larger. A 2B runs about $120 today, and still beats the DR-30 silly. Sigh.

Message-ID: <7lr6q4ote1@nw001t.infi.net>
Source record: 104463

We have been having a heatwave in the NorthEast and the power companies have been reducing power on a rotating basis in order prevent a complete blackout.

I noticed that the output of my 940S/AT is down to 70 to 80 watts (even into a dummy load) but only on some bands (12 and 15 meters). If this were due to the brownouts, wouldn't all bands be affected?

Source record: 104464

Fax Yaesu (562) 404-4828 a copy of your ham license and tell them you want the printed instructions to open up the VL-1000 to 12/10 meters. They will fax you the instructions promptly to you. I opened mine up and it will put out at least 1000 watts on any ham band including 6 meters.
Without the mod it will only do 500 watts on 6 meters.

Source record: 104465

If you are just interested in monitoring transmit audio waveforms, a SM-220 or SM-230 will work fine with ANY hf rig. Unfortunately theTS 570 does not have the rear panel jacks required for hookup to a SM-220 or SM-230 for other functions (bands scope, received audio waveform monitoring). If you are interested in the band scope OR monitoring received audio waveforms, then only Kenwood rigs that have the rear panel "IF 1" and "IF 2" jacks will work. These are theTS 830, 940, and 950 series. The 850 and 870 have the "IF 1" jack only and can be used for band scope operation but not received audio waveform monitoring. If you do find a SM-220 then make sure it has the BS-8 band scope option for the 8.83 IF.

From: kb9szx@ibm.net
Message-ID: <37814383@news1.us.ibm.net>
Source record: 104470

Actually, this is a bone-fide problem, and Kenwood has released a service bulletin on this issue. Ron is correct, you should check your antenna+feedline for sure, however there is also a fix that can be done..Although it's nice in a way...Think of it as "Final" Protection.....Anyway, This bulletin was for the TS-50, but it is essentially the same as the TS-60....here is a quote from the service bulletin:

"Occasionally an "Hello" message will appear in the display of the Transceiver when the TS-50 is loaded into an antenna without the use of an antenna tuner. This symptom usually occurs when the negative terminal of the power supply is floating (UN-grounded for RF) This can result in RF feedback that causes the supply voltage to exceed 16 vdc"
The entire address to this bulletin and the Mod to correct it is at Kenwood's FTP site:
http://208.197.91.81/Amateur/AmateurServiceBulletins/ASB1030.JPG

That's darn nice of Kenwood to put this out for all to see....Why don't they all do that....EVERYONE makes mistakes :)

The best of 73's

310. KENWOOD TS950SDX FREQUENCY CALIBRATION

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-05 00:00:00 UTC
From: rong@computer.net
Message-ID: <378140c7.2716715@news.computer.net>
Source record: 104471

I recently got a used 950SDX. How do you check the frequency
calibration ??? I read somewhere that you set the frequency to
10.000.00 in CW mode, and listen for the 800 hz tone from the cw
offset beating with WWV. You then close your key, and listen for a
double beat--the 800 hz cw sidetone will beat with the 800 hz offset
tone. Mine zero beats at 10.000.01--I don't know of this is accurate
because if your 800hz cw sidetone is slightly off, or your 800 hz cw
offset is slightly off, then your results will not be accurate. I
think a more accurate way is to set the readout so it just switches
over to 10.000.00 from 9.999.99, and then switch from USB to LSB. When
I do this, the pitch of the WWV tone changes slightly. If I go midway
between 10.000.00 & 10.000.01 in fine tuning mode, the tone stays the
same in USB or LSB. I think this is more accurate, but how do you
adjust for it--I don't see anything in the instruction manual as in
previous Kenwood models.

Thanks,
****

Nicki:

Contrary to what you state, QST is not afraid to tell it like it is.

I was considering buying an Icom IC 736, a few years back. The review in QST slammed Icom saying that there is a reciever audio IMD problem with the 736.(QST April 1995 p.67) I have read other reviews in QST that were not favorable to other manufactures. In contrast,some of the other magazines have a much less technical review, based only on the authors experience with each radio.

I went to AES here in Milwaukee looking to buy the 736. After playing with it a bit, I decided not to buy it. I listened to the reciever, and did not like what I heard. If not for the QST review, I might have bought it, only to be unhappy with it later.

I held out a couple more years, and am now the proud owner of an Icom IC 746.

312. Re: SG 2020 comments

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-05 00:00:00 UTC
From: tnic <tnic@erols.com>
Message-ID: <7lrhgj$991$1@autumn.news.rcn.net>
Source record: 104473

I have been using the 2020 for a while now. I have
only good things to say about it. But I understand
its design limitations.

You have to understand the radio for what it is.
Its not a multiband geegaw festooned with features
like the 706 or the FT-100. Its a stripped
down 20 watt radio designed (in my opinion) for
use in the field.

I have used it in my car - but I dont care for it
as a mobil rig. Its awkward to use and lacks a convenient "lock" after you
tune.

At home I have a Yaesu 847 which pump 100 watts
and is a far more versitle radio that the 2020
doesnt come close to. However I often use the 2020 even at home because I
like to see
where I can reach with 20 watts.

For me the SGC2020 SHINES when my girlfriend and I took our seakayaks
onto remote rivers near Canada for a week and run
20 watts off a small 5 amp hour gell cell which
we recharge with solar pannels... the 2020 is
FANTASTIC. Its my choice. The only game in town
for me. Its a piece of equipment I can rely on
- like all my outdoor equipment. Its a serious
radio for serious fun! The FT100 and 706 ilk are
too thirsty for power for extended solar back
country use like I do.

I have worked the world in the woods on phone,
AND ITS FUN. I use a Saint Louis vertial
(http://www.fix.net/~jparker/w6mma.htm).
It is a great antenna for this radio. All bands no tuner needed. Far
superior to
a random wire.

One standard to judge radio power by is
maintaining a schedule.
If you want to maintain a daily schedule with some
friends around the country - my advice is go for
100 watts. It will punch you thru higher noise
levels and poor conditions (but not all
conditions).

You may only make your schedule "many" days on the
2020 but not under poor conditions. But be assured
if you want to chat with "somone" the 2020 will
make contacts under any conditions like every
other radio.

A frequent contact of mine sees me as an S7 on the
2020 and an S9 on the 100 watt rig. Thats not a
problem unless the noise level is S8!

Its a great rig and the only one in its class.
Its not a 706 or an FT-100 and should not be classed with those

Tnic@erols.com

David Abell wrote in message <01bec45f$2e471460$681c0ccf@default>...
Hi all,

Anyone have a SG 2020 they want to comment on? Used it mobile? Sensitivity?
I never see these in the used market. Is this a keeper or is no one buying
them new?

Thanks,

Dave

Okay Here's a Nice Package Deal For The Ham on a Screaming Tight
Budget
(I know...I am one ie: nice, Ham, On a Budget :) :

1) HTX-202 HT APPROX 2 YEARS OLD WITH MANUAL, RUBBER DUCK ANTENNA,
POWER/
WALL CHARGER, CLAMSHELL WITH 6 "AA" BATTERIES INCLUDED. NICAD NOT
INCLUDED

2) PACOMM TINY-2 1200 BAUD TERMINAL NODE CONTROLLER , MANUAL/ QUIK
REFERENCE CARD AND ALL NECCESARY CABLES/PLUGS

3) TIGERTRONICS BAYPAC BP-1 PACKET MODEM, MANUAL, CABLE INTERFACE,
SOFTWARE
IS READILY AVAILABLE OFF THE INTERNET: ; IE BAYCOM 1.4, WINPACK,
WINTNC
AND YES YOU CAN RUN (2 also) IT UNDER WINDOWS WITH WINPACK/WINTNC
SOFTWARE

4) 5 WATTS IN/ 35 OUT "BRICK" AMP WITHOUT CABLES

There it is...it all runs...it all works...and it's all in
decent
shape.(Yes I could ask a little more but I remember well just getting
my
ticket and having no gear for several months...if i can spare a fellow
ham that...)

AS IS ...As a package... Only $100 Money Order Takes it all.

The manual that I have shows listings for several modules for this tranceiver. However, I am wondering if anyone has or has convertd a module for the 726 for 1296 Gig. I would like to know of availability if such a module is available...

Tnx in advance

Just to add to the fray, for those MARS and CAP members who may (or may not) be concerned with the 2001 implementation of the NTIA spectrum specification(s), the ICOM 706-series radios are fully NTIA compliant for HF use with the addition of the TCXO kit (not so the VHF, however). The Yaesu FT-100 is not compliant. Query to Yaesu reveals that they are now aware of the situation but will not provide a TCXO for that radio, and, as they told me... "We don't really care about that particular market". (They do have a commercial HF SSB unit, I believe). Sooo, add it all up.. maybe the 706-series are a better bet for some.

Message-ID: <19990705081615.14834.00003683@ng-fi1.aol.com>
Source record: 104519

I have a IC735 loaded.It has the 500hz Cw filter, the built in Keyer, and has the two IRCI SSB filters (455khz IF and the 9 khz IF).
The rig looks as new.
It comes in the original box, w/ the manual, mic, packaging.
I was going to pull the filters and sell it, but I figure there must be some hams who want a serious IC735, and are willing to pay a premium for such a rig.

I also have the PS55 Power supply and the SP-3 speaker available.
I must get $650.00 (or best highest offer) or so for the IC735 as it is, to justify selling as it is, or I could have the IRCI filters and the CW filter pulled and sell it for less.

If this is the 'round' nut that is smooth with two opposing groves, that's
a pretty standard nut. However, the tool is fairly expensive. But even
still, $46 sounds pretty steep.

Make your own if you can.

You might be able to use a set of 'circlip' pliers, but only if the nut isn't
on their exceedingly tight. (These are pliers they sell that have replaceable
'tips' use to hook the little rings on the end of internal and external
'circlips'.
If you break it, the tips are replaceable.)

You MIGHT be able to get it off with good set of needle nose, but be careful
or you will booger up the nut.

If it's really as tight as you say, it may have been put on when the plastic
and any paint wasn't 'cured', in which case, you'll need the real tool,
or something quite durable, to get it off.

How did you try to make a tool? You can't use that soft a pipe, it's gotta be
fairly hard.

Hi Neil,

If I'm correct, this is a standard "round" nut with two notches in it... you can use a variety of tools to get it off... A small flat blade screwdriver and just work one side... go to a auto parts store... they have tools that might work that remove "eye" ring clamps... use your imagination... hey a good pair of needle nose pliers would probably do the trick.

Source record: 104344

Has anyone experienced poor microphone quality (like a rumbling noise)
on their radio? I seemed to be experiencing this problem and
apparently, the only cure is to buy a new microphone. Has there been
any tech updates for this?

I too am getting a "Not Found" when trying to link to Ham Radio Outlet
(www.hro.com).
(11:15pmET 7/6).

I have a question though. What do you mean "....national dealer of the
two"?
I can name a lot more than two "national" dealers. Maybe it depends on how
you define "national".
But maybe, you need to broaden your horizon. Let me suggest you go to
Icom, Yeasu, Kenwood, ADT, or Alinco's web sites and checkout their list of
dealers as a starting point. I personally like the folks a Universal the
best, though I had a good time chating with the folks at AES in LV. Then
there's Texas Tower and Jun's. HRO is local to me and I'd like to keep them
in business so I have a place to go play with the new equipment. Grove
carries some things, though he's more into scanners. Lentini, Austin AR
Supply, Radio City, and I'm sure there's many I've overlooked.

361. ACC shackmaster 100 FS or trade

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-06 00:00:00 UTC
From: gundoc <gundoc@iglou.com>
Message-ID: <3782ce38.0@news.iglou.com>
Source record: 104353

I have decided to sell or trade My ACC Shackmaster 100 shack controller. The Shackmaster will control a UHF radio a VHF radio and a H.F. radio. You can crossband from Your UHF radio to the VHF or H.F. radio. You can check into that net from Your lawn chair with an HT.or You can call on the phone from out of town and check into that same net over the phone. The Shackmaster is an Autopatch on UHF or VHF simplex or through a repeater. It has a function called Shackpatch that lets You ring Your shack and the XYL can pick up the Local mic and talk as over an auto patch. You have full control from Your Mobile radio. You can operate X10 devices through the Shackmaster and change the position of Your beam from Your Mobile or over the phone with the Shackmaster 100. This unit comes with full documentation and Manuals to set it up with Your call sign (Oh yes it ID's for You too) and other input You need to put in. I am looking for a good used dual band Mobile or a GE M-PA VHF with scan and a touch pad that can be put into the 2 meter band.
Thanks for looking
Dean

matching the tone on USB and LSB is in my opinion the best way to do this
without a counter.

I think there is a hole on either on of the sides or the back of the rig to
make a fine tuning adjustment for the frequency. Check the manual it may
show you this info.

But the KEY POINT (according to FEMA's consultant) is that the re-radiated
energy builds up IN PHASE because the point at which new radiation is
being generated is advancing just as fast as the newly-generated wavefront
is propagating, i.e. at the speed of light. This is what gives the EMP
its very sharp wavefront and wide bandwidth, which in turn is what makes
bypassing and shielding tricky.

Source record: 104393

I am in search of the following specs in a Portable radio:

---

1. Low Band / VHF / UHF / 70cm / Business Band
Specific frequencies: 46.42MHz, 154.220MHz, 154.7850MHz, all 70cm Band, and 464.9750MHz

2. Keypad

3. Scan through all channels

The Low, VHF, and UHF frequencies are covered by my Twp. for I am with the Fire Department, the 70cm band, of course, is for us Amateurs, and the business band frequency is for my job.

I am not looking for anything fancy, but any information would be helpful.

Sincerely,
Scott Barrish

I want to warn everyone that this man, Jim Bonner, is not to be trusted. He advertised a /\/\ VHF HT1000 and I sent him a postal money order the next day on 5/6/99. He told me once that he received the MO and was shipping the unit Friday, 2 weeks after I sent the MO. After a week, I emailed again. He said this time he would be sure to send it that day. I called and he gave me an excuse about an ill family member that kept him from sending it. He also assured me he would now send it and forward tracking numbers. He didn't. Finally I tried to call him and I guess he was on the phone and used call waiting and accidentally answered my call and said it would be shipped. He hasn't answered the phone since. Then I heard nothing for another week. Finally a month ago he emailed that the scan function had died on the radio and it had been in the shop the whole while and that the money would be sent back. I wrote him a week ago and said if I didn't see it in 7 days, I would do just this. A warning to the newsgroups. He goes by Bnn801@aol.com and jbonner@firefilms.com . I made every effort to let him return my money, instead he tries to pawn off some other radios I guess with no intent to return the money. I hope this embarrasses him and informs you. I know that when you sell over the internet, you take risks. This one bit me. I know not everyone is like him, but those that are do exist and don't care about what is right. I haven't completely given up either. There still is a way to get my money back through the Post Office fraudulent claim procedures. Then they go after him. As one last token to fix this, I offer to erase this message if I do receive my money from him. Until then, he may see this a few times. Jim, all I wanted was a fair deal. If you weren't going to send the radio, be man enough to send the money back, like you told me you would.

His address is

Jim Bonner
2740 E. Ann St
Philadelphia, PA 19134-5716

and phone numbers

215-634-3606 <----now disconnected

In Japan, FT-100 TCXO(1ppm) is now sold.
I have just bought the TXCO. It is the TXCO-8.
The price is about $90.
http://www.yaesu.co.jp/news/1902.htm

Hi, have an HT1000 rapid charger and 2 slim (dished sides) hi-cap batteries for sale. Charger was with a 'd' series radio so should be about '97 model and batteries are '96 date code, both with belt clips and both hold a charge well. (one was on the analyzer about a month ago at 1340mAH) Charger also includes that little 'spacer' to make a perfect fit for batteries only or remove it to charge on radio.
Priced at $60 plus shipping CONUS.
please email if you have any questions!
thanks,
Randy

Message-ID: <3782ea19.256123@news.swbell.net>
Source record: 104409
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have a near mint condition Yaesu FT890/AT rig for sale. It has seen very light use, and works 100%. Covers all modes, 10-160 meters. Included are: FT 890 with Auto Tuner, standard MH-1 mic, power cable, mobile mounting rack, Radio Shack power/swr meter, original box and manual. The rig has been mounted in a car briefly, so there are a few scratches where the mounting rack connects to the radio. Since then, it has been operating as a base station in my shack.
You can see a picture of this rig as it is sitting in my shack right now, at http://www.directlogic.com/ft890at.jpg (note that the power supply seen in the picture is *not* included).
The price for this package is $750 firm + shipping. Please call 818-882-0101 between 4PM - 11PM Pacific Time (GMT-8). I am in Southern California, so if you're nearby, you can come take a look at it.

Thank you.

> a dummy load) but only on some bands (12 and 15 meters). If this were due to
> the brownouts, wouldn't all bands be affected?

In fact, I think the 940's power supply even to the PA transistors is
regulated, so you should see no effect from a brownout.

Switch the meter switch to "VC" and key the rig. (without modulation)
Read the PA collector voltage on the bottom scale. Mine reads 29V.
(which I suspect is a bit high..) Read it again at a time when you're
pretty sure there's no brownout. That should tell the story.

400. FS: Laptops or Trade

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-06 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <37822dd5.1211003@news.hughes.net>
Source record: 104418

Hello All,

I have three laptops for Sale or Trade.

1) 2 Dell 325SLi 3x86 25MHz Laptops. Both work 100% and in great
shape! Both laptops come with batteries & 120 MB Hard Drive.
One battery is good, the other doesn't seem to hold a charge
for too long. The laptop with the good battery also comes with an
External floppy disk drive (3-1/2" 1.44 MB) and the cable to connect
it to the laptop. I just bought the floppy cable a few weeks ago, it
is still under warrantee if it goes bad. The screen is a VGA monitor.
Both laptops are identical. They have outputs for: External monitor,
Serial port, Parallel Port, and PS/2. Both laptops run off of 12VDC.
These are perfect for logging contacts, contesting, rovering, Field
Day, and even accessing the Internet!

For the laptop witht the good battery & External Floppy & Cable: $100
The other laptop: $60
Or TRADE for these.

These are real slim, and allow for ease of use due to their compact
size!

2) Dell 320N+ 3x86 Laptop 20MHz
This laptop comes with 170 MB HardDrive, 3-1/2 floppy, modem,
Nice Dell Case, & battery. The battery does not seem hold a charge.
The only problem with this one is, when I turn it on, the VGA monitor
will not turn on. But, if I use an external monitor, everthing is just
fine. I am asking $50 for this laptop or Trade.

If you are interested, please E-mail me or call me.

E-mail: mikrounit@hughes.net

406. IC-211 note sent

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-06 00:00:00 UTC
From: "Edward M. Huffman" <huffman@flash.net>
Message-ID: <37824967.7EF91EA1@flash.net>
Source record: 104424

There was a service bulletin (Tech Note 79-0712) about failure of plated through contacts on the PLL board, and Icom had two diagrams for jumpers (about 15) to be added to resolve the problem. One diagram was for "late model" boards (those with connectors,not edge soldered). I have a copy, but it is illegible. Does anybody have or know where to get a clean copy of the late-board jumper layout? I love this radio, but it needs help!

Thanks,
Ed, K8ZL

407. Beware N3BK Chet Hogue

I hate to do this but I have waited long enough. This guy sold me an Alinco DJ-580 back in February which was supposed to have a bunch of accessories. I got the radio but not all the accessories. At first he said he could not find them and then he said he had and would mail them. He asked me to reimburse him for the shipping on the accessories after I got them and I agreed to. The last time I heard from him was in April 22 and he was going to ship on Friday or Monday. I have all the e-mail corerespondence to verify this.
He is a poor specimen of the Amateur Radio Community.
His address is:
N3BK
Chet Hogue
615 Coulter Rd.
McKeesport, PA 15131

I'm in a similar situation. There seems to be two options.

1. Buy an MFJ artificial ground.
I'm not aware of any reviews of this, so don't know how
effective it is.

2. Use an antenna system that uses balanced feeder, not coax.
(The only coax required being that from the tx to the ATU)

412. Racal Model 1992 Universal Timer/Counter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-06 00:00:00 UTC
From: Fred Allen <FAllen-IDC@worldnet.att.net>
Message-ID: <01bec7ed$0c5dc100$5b804b0c@default>
Source record: 104430

Hi,
I have a Racal Dana Model 1992 Universal Timer/Counter for sale. It covers DC to 1.3GHz. Channel A's sensitivity is 25mV rms to 100MHz ans 50mV rms to 160MHz. Channel B's sensitivity is the same as channels A's, except the frequency range of channel B is 10MHZ to 100MHz. Channle C's sensitivity is less the 15 mV rms from 40MHz to 1 GHz, and less than 75 mV rms up through 1.3 GHz. Includes IEEE 488 interface. Unit is in good physical condition. Operating condition is excellent as it has just been gone thru. $385.00 shipped via Fedex 3 day,(USA ONLY). Sorry no manual.

Thanks,

Fred

Message-ID: <37814750.7DE0@athenet.net>
Source record: 104481

Many years ago my elmer (WA4DDG) passed on and left me among other things his old vibroplex bug. I used it briefly and then the age of electronic keyers relegated the old bug back to its carrying case. I would like to try and indentify and possibly date the unit if possible. It has a chrome base with a gold (brass? overlay)the serial number is 217016 and the underside is stamped "presentation" in red ink. I know there are lots of variations on the vibroplex keys can someone help me ID this one?

Have a look at the G4XYW modem at
www.tvipug.freeserve.co.uk
which is RUH compatible (9k6 only) and also interfaces directly
to a TNC disconnect header with no additional components and
to a PA0HZP Opto-SCC card with no extra parts (both connector types
are on-board). Lots of other features such as CWID compatible,
hardware PTT watchdog, selection of TX waveforms, clock
generation and many other points.

Also available is a simple interface to allow the modem to be driven
directly from a PC serial port. So far DOS drivers for BPQ, xNOS
packet driver, Ethrax25 packet driver are ready.

Win95/win98 users are looked after by the SV2AGW packet engine
which now has a suitable driver.

Linux users will have a driver very soon!!

None of these drivers are required when using an SCC or TNC of
course - only if using the simple voltage converter.

>......2meter,70cm.......what ......like i said we are just getting into
>this so we dont know what all these mean......which is best so we have
>alot of people to talk to.......thankyou in advance
>

Well im not sure about the u.s., but in Canada here the no-code basic
allows 2 meter operation (vhf-band) that's about it as far as i know.
Which allows repeater operation so you can communicate further (extended
range) but 2meter operation with-out repeaters is kinda limited as far as
distance is concerned. But even the Basic qualification requires you to know
some basic's about radio, theroys, hi-pass lo-pass filters etc,

Good luck......

Hi folks :) I'm an electronic musician *seriously* looking for the following musical equipment, in any condition, even broken:

-OLD SYNTHESIZERS (from the 60's-80's)
-OLD KEYBOARDS (w/ knobs or sliders)
-OLD DRUM MACHINES
-OLD SEQUENCERs (w/ knobs for each step)
-OLD VOCODERs ("robot-voice" sound)
-MODULAR PATCHABLE SYNTHESIZERs
-RACK SYNTHS
-INTERESTING EFFECTS and anything related to the above.

-Moog, ARP, Korg, Roland, Sequential Circuits, Oberheim, Yamaha, EML, Electrocomp, EMS, Synthi, Putney (VCS3), RSF, Buchla, Serge, Polyfusion, Ionic, Paia, SMS, Wavemaker, E-mu, Steiner-Parker, Chroma, Aries, etc.

-Roland TB-303 Bassline
-Roland TR-909 Drum Machine
-Roland TR-808 Drum Machine
-Simmons SDS-7 + SDS-5 + SDS-6 Drum Brains and Sequencer
-Pearl SY-1 Syncussion
-E-mu SP-1200 Sampler Drum Machine
-Sequential Prophet VS rack
-Oberheim Xpander
Simmons SDS V electro drum brain
Simmons SDS7 Digital-Analog Drum System (brain only)
Roland Jupiter 8

Yes there is a way.... if I remember correctly, turn the radio off. Then I
believe you press buttons A, B & C together and while holding them down turn
the radio on and release the buttons. Then press and hold the Function key
like you normally would to get the menu. Rotate the selection knob until
you see the new "hidden" menu F1 through F59. It will be right after the
normal menu selection numbered 66. I don't remember what the particular
menu option is called but it's obvious when you see it.

Body handling: Binary attachment payload not displayed: orlando.guerra.vcf

I am looking to purchase my first HF Rig. I have very limited funds. I have been looking at the MFJ-94XX (XX = 20m, 40m, 75m). The catalog has them listed at $239.95. Are their any other SSB Single band HF radios at this price or lower available?

Any personal experience with the above models? Comments and suggestions will be appreciated.

Thanking You in Advance
Orlando Guerra Jr.

Well....I had a similar problem with a Kenwood TH-205AT....I really like this HT, however it forgot all 3 Memories....every time it turned off. And unlike your situation, I did not have the luxury of remoting the battery......Kenwood wanted $15 for the $2 CR2025.....a common wal-mart avalible item......All I had to do is carefully repackage the battery....and ever so carefully solder on new tabs...manuver it into it's small home, with all kinds of nifty devices around it.Yes, quite an ordeal. But at the time before eeprom and other less forgetful technology....I guess it is the best they could do. Remember, they are of course, Engineers. (No offense to any out there) Could they have made it easier? Sure......But ALL hams like a good challenge, Right?
All is well with my little HT for 5 years.....I just have to keep telling myself that......
73,
Charlie

As someone fairly new to amateur radio, here's a few thoughts for you:

If your wife doesn't want to take the code test, are you both at least going to take the test for your No-code Tech licenses? If your wife doesn't want to take any tests to get her license, then you both might be better off with a pair of FRS radios. If you both take the tests and get your Ham licenses, then you'll be able to take advantage of the extended range that the radio repeaters give you.

Before you start picking amateur frequencies to start with, you need to determine whether or not both you and your wife will be getting your licenses. If not, then stick with FRS radios...that way you won't have deal with 2m or 70cm frequencies...14 frequencies are already set aside for you to use. You'll have a maximum range of about 5 miles between you and your wife with these radios.

If you both study for the Novice and No-code Tech exams, then you'll learn the difference between 2m and 70cm, and you'll learn about how repeaters work. And you'll learn that you and your wife can be over 100 miles apart and still be able to communicate easily.

supports two antenna's and are selectable from front panel.
trade for other radio or computer equipment?

444. Need mod help for Kenwood TM-742A with B/2 control unit

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-07 00:00:00 UTC
From: schubot@rigel.cc.wmich.edu
Message-ID: <kxTGP2ufw8NY@puff.acs.wmich.edu>
Source record: 104303

I recently bought a used TM-742 WITH 6/2/440 MODULES. This radio was already "moded" and does appear to have some extended rx/tx capability, however, the 440 module will not switch into 800Mhz mode. This module, when tested in a 741 will switch to 800mhz. It also has the mod for the extra 800Mhz antenna.

I opened the radio to check the mod and it appears to match the "VE2PAL" mod with resistors as follows:

```
---- ----
X XX
---- ----
oooo oooo
---- ----
XXX XX
---- ----
```

That document states that this is for the control unit:
X53-346x-xx A/2, however, My control unit is:
X53-3460-11 B/2 and I wonder if this is the problem,

I also found the mod by kb9mwr (steve lampereur) that stated that the b/2 control unit was different but was not completely clear what the final jumpers settings should be (I don't know what the original settings were, the radio was already moded when I got it). He also does not say if this mod (shorting lower part of pad 7) will enable 800mhz rx but does say that it disables automatic repeater offset which I would prefer not to loose.

Does anyone know (preferably from schematics or kenwood mod sheets) exactly what jumper configurations produce what changes in the radio.

What I would like is extended rx/tx, 800Mhz rx (from 440mhz or 1.2Ghz modules), 200 memory/band. I would rather not loose automatic repeater offset but would like to know the tradeoff in terms of rx/tx range to keep from loosing it.

Thank you,
Ronald Schubot

> ssb/cw station.

Alex-

One possible drawback is that USB is the only choice of sideband. If either your VHF or UHF conversion happens to invert the sideband, you might have to change the carrier oscillator crystal frequency to flip it back.

Also, for CW use, the carrier is well within the filter passband, so you get beats on both sides of zero. You have a 50-50 chance of being on the wrong side of a signal you hear, so two of you could end up "walking" up or down the band!

According to my Artsci mod book 9A, the mod you have described is the 'correct' one. I too have a TM742 and this is the same mod I have done.

However-- The control unit has changed one or two times so far in this radio's production. Later control units do not have 800 MHz receive. The band unit will have the circuitry there but the control unit will not do it. On the other hand, earlier control units had some bugs which when they surfaced were very (very) annoying. My 742 is one of the early ones - I get 800 MHz but I have to put up with the glitches too. The main one was the s-meter squelch function which glitched and caused the radio to lockup so bad it had to be disasembled and reset without any band units, to unlock it.

If you go to the Kenwood website and find the link to their FTP site, look for their technical service bulletins regarding the 742. There, they will list the control unit's part #'s, and they do make mention of which control units do and do not have the 800 MHz receive. I'm sorry I don't recall the bulletin numbers but I have read them and recall seeing the info.

T.W.-

I notice that some of the other replies are a little pessimistic. Please
don't be discouraged!

I suggest you check with your local Radio Shack store, and look for "Now
You're Talking", a book that tells a lot about the hobby. They have other
books that are study guides for the various Ham written tests.

It is possible that the local Radio Shack store can tell you about Ham
Radio clubs in your area. If not, perhaps someone reading your message
here would know of a club if you would let us know where you are located.
Many clubs offer classes that tell you what Ham Radio is about and prepare
you for the tests, which they also administer.

Ham Radio is a neat hobby with many complexities you can explore.
However, Ham equipment isn't cheap, and you may not be interested in the
"hobby" aspect. If you just want to talk to your wife, the price of a
pair of good Ham transceivers would pay for a lot of air-time on a pair of
cell phones!

I have an ICOM Phone Patch. The unit is the same dimensions as the PS-15 and PS-20 power supplies. It comes with the phone cord and an 8 pin microphone connection. Front panel (through panel) adjustments for setting levels. Asking $150.00 + shipping o.b.o. Checks will take 7 working days to clear, MO or Traveler's Checks will provide next day shipping where possible.

Please respond direct to my email address, thanks.

I also recently built a 1254 and I am most pleased with it! A word of
warning though, I found that with the resistors that they use the red band
and orange bands are dificult to distinguish and I had a simmilar problem
with the most of the inductors with the blue and green bands. I managed to
loose several parts which they cheefully replaced. Thankfully I live near the
factory and could just drop in. My only complant is that there could be more
range for the clarifier control other than that a great kit.

Yes, the C74MSY is crystal controlled. I do have elements for this repeater ... None in the ham band, but they can be sent to ICM to be recrystalled for the ham bands. I've mantained these old MOTRAC UHF repeaters for years. It uses an 8072 (4657 also??) tube in the final PA.
I do have manuals for this beast.

487. Drake R-7A/RV-75/1544 For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-07 00:00:00 UTC
From: feinstei@earthlink.net
Message-ID: <3782c539.903172@news.earthlink.net>
Source record: 104370
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.equipment

I have an extra Drake R-7A/RV-75/1544 setup for sale since I was fortunate enough to find a Drake 4245 Commercial receiver.

All equipment is in excellent condition with original operators manuals. I live in the Detroit area.

The Drake R-7A has the 4.0 kHz, 2.3 kHz, and .5 kHz filters installed. It of course has the noise blanker and receiver protector as well (the R-7A came standard with these). Price: $800 plus shipping

The RV-75 and 1544 are being sold as a set. The RV-75 is a rare external synthesized VFO which connects to either (or both) the TR-7 and/or R-7 radios. It is extremely stable and has the status of a collectors item.

The 1544 is necessary for connection of the RV-75 to the R-7A (it isn't needed to connect the RV-75 to the TR-7). It also allows the RV-75 to control both the R-7A and the TR-7 as an external VFO. It is even rarer and harder to find than the RV-75 (although Drake's service department will give you the plans and connectors to build your own)

The combination RV-75/1544 package's price is $550 plus shipping.

If someone is interested in the RV-75 alone, I will sell it for $425. I will NOTsell the 1544 first so don't bother to ask. I will post the 1544 separately if the RV-75 is sold first.

If interested, please contact:

What do you need from your radio equipment?

Short comms? Like from car-to-car or on hikes or picnics? The FRS
provides fairly reliable UHF comms for up to about 3/4 mile - no lisence
fee at all.

If you need something a little "longer," then GMRS might be the way to
go for her. No test - just a easy form or two ti fill out to the FCC,
and $75.00 for five years' licensing. One license covers all immediate
family members, too - and they don't have to live at the same address.

Tell us what you NEED from radio equipment - and we can better suggest
solutions for you!

Neil, you can remove it with a small pair of needle nose pliers. In my own experience, I relocated the battery with leads into a more accessible area using a battery intended for lap tops which came leads, heat shrink, and Velcro.
Good luck,
George (KE2AM)

Hello all, and thanks for your kind responses to my plea. Actually there IS a fairly happy conclusion to my plight. I was able to, as so many suggested, use a pair of needle nosed pliers to do the job. The only proviso is that I had to firmly clamp the pliers with a "c"clamp and a couple of large fender washers to make the plier's joint more rigid.

But, was that nut TIGHT! So tight, that I had to bear down and use my entire strength to break it free. It was a little disconcerting, I don't like pushing that hard on such a small area, but it did finally "click" and start to turn.

I did then do what one other person thoughtfully suggested, I put in a battery holder somewhere else in the radio (easy to reach) and ran a couple of wires to the old, now-empty, battery position.

But, my frustration with Kenwood remains. It would have been an easy matter for their engineers to make this easier to access, user-repairable, rather than the white-knuckle affair that it is. I'm not afraid of working on electronics, but when there is such a real risk of doing physical harm, my nerve begins to fade.

So, thanks again all, and this will definitely affect my future shopping behaviour. I have redoubled my determination to ask where all of the "consumable" items are located (bulbs, batteries and the like) and to think twice before I buy any product that requires a trip to a high-priced service center to replace them.

Best regards and 73's to all who responded.

Neil, N1DMA NeilR@innermedia.com

P.S By the way, this was a more educational experience than I expected. In the process of researching this, I spoke with a variety of Kenwood-authorized service centers, and heard some pretty wild things. Like "this is no longer the age of Elmering and helping each other...I have to make a living, and if I have to charge you for a full hour's work to spend 1 minute loosening that nut, that's what I'm going to do...". And, "no, it's not Kenwood's job to make these rigs easy to service, they're too complicated anyway for the ordinary ham".

Really an eye-opener.

498. Re: Kenwood TMV7A Microphone Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-07 00:00:00 UTC
From: dinoal7lz@aol.com
Message-ID: <19990707081649.22722.00007329@ng-ch1.aol.com>
Source record: 104381

I had a problem with the mic becoming intermittent as wires in the RJ telephone type connector started to come loose. Very easy fix, although a little expensive is to go to Radio Shack and buy one of their crimp tools that will do 8-wire telephone connectors (the tool is about $30). It's a snap then to just redo the connection with a new connector--it cured my problem immediately.

Hope this helps...

503. Anyone have VX-5R in Houston area?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-08 00:00:00 UTC
From: Randy, WB5KCM <wb5kcm@hotmail.com>
Message-ID: <7m12dguoa1@nnrp1.deja.com>
Source record: 104192

Anyone out there in the Houston Texas area own a VX-5R that I can compare receiver intermod interference problems? My problem is this, my VX-5R is completly useless in the 120 to 299.995 Mhz range due to pager and other transmitter type noise completly wiping out the receive in this range. My VX-5 is under warranty and I sent it back to Yaesu. Yaesu service reported that they are unable to detect any problem and suggest that the problem may be interference signals mixing and getting into the receivers IF.

In other words, all VX5's will experience this same problem. The most source of interference I have on the VX5 is from a pager transmitter on 152.005 Mhz.

Does anyone else in the Houston area have this same problem? If you do not, let me know and I'll pass this on the Yaesu service that other VX5's in the same area do not have this problem.

If you do have this problem as I have described then have you found a way to work around it?

Just for some additional info, this is the only radio I own that has this severe intermod problem with the receive. I also own a VX-1R, and several other wideband type radios and the interference is very low and acceptable on these other radio's.

Any help with this is most appreciated.

Cross-posted to: rec.radio.amateur.equipment,alt.ham.radio.vhf-uhf

David,
This may not be normal!
My VX-5R has the same problem. I also have several other HT's and
other wide band type radio's. None of them have this pager type
intermod noise like the VX5 has. I sent mine back to Yaesu for warranty
service. Some intermod interference is normal for wideband type
receivers but this is extreme. Mine is so bad that the range from
120.000 to 299.995 is unuseable. This is with the stock antenna. The
range from 140.000 to 149.995 is better but still there is this pager
noise riding on the two meter carriers. Yaesu needs to find out whats
going on here and find a fix for this.
Hope you can get yours going okay, Ill try and let you know how mine is
when I get it back from yaesu service.

Hi,

Welcome to the HF bands. If yu are willing to pay $239.95 for a single band, I would recommend you go for a simple TS120S Used, you can find many on the swap nets for about $275, for an extra 30-40 bucks you get a 80-10m SSB/CW/AM rig !!

Good luck ! & 73's

511. RE: Re: VX-5R and Intermod

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-08 00:00:00 UTC
From: chia@news.utk.edu
Message-ID: <7m1fbn$2sm$1@gaia.ns.utk.edu>
Source record: 104200

It is because the VX-5R is nothing more than a VERY weak attempt
at a copy of the Icom T8A. I have had both... key here being I HAD them
both. The T8A was not so bad unless I got NEAR a couple of ridges with
known pagers Tx's on them. But the TWO VX-5R's I HAD were both the worst
HT or receiver I have ever had. What do you expect from Yaesu? They tried
to cram as much crap in an HT as they could. I did not like that they
took away a BIG chunk... TWO big CHUNKS of the 800MHz band. NO NO I do not
mean the normal Cell phone freqs. from 823-849MHz and then 868-894Mhz..I
mean part of a BIG chunk to be exact if not two of the PUBLIC 800MHz band!
Oh yeah... when I asked the Yaesu tech about this on the phone I was told
it was because the HT picked up "cell image" freqs. so they had to block
those freqs. too! God!.... you know there WAS a time when Yaesu actually
MADE good equip. and it had/has GREAT rejection... (as my FT-530 does)
But of course...let's all remember that this was BEFORE the time when your
HT on your side HAD to pick up everything from HF all the way to 1000MHz!
and higher!!! Come on people.... how CAN it have good rejection it is the
size of a deck of cards no SMALLER!!! and you want it to reject noise as
good as a well shielded older "hand sized" handheld..? Not going to happen
and from what I gathered from Yaesu they don't care about that... nor
TAKING away freqs. we can all LEGALLY listen to as long as they can sell
the cool, and hip and happening HT that has all this crap on it and can
RX from DC to daylight or beyond!! I will not have another VX-5 nor ANY
new ht for a long time if I ever do again.... no need... my old HT's and my
scanners let me do what I want and hear WHAT I want... at least what I
legally CAN for now!

Ok... enough of that.... just my thoughts... of all the HT's I have
owned....that would be well over 12+... the VX-5R is and was the WORSE!

Hi,

I had an 8100. I think you are seeing the beginning of a problem caused by the squelch/volume controls. As I understand it what happens with use is that these controls come loose from the printed circuit board to witch they are attached, both mechanically at first then electrically.

I sent mine to RT system in Huntsville, AL. They repaired the problem and for a relatively small charge.

The receiver is better in the ft-100 according to QST. However, the FT-100 has a high failure rate and QST never mentioned this. I would recommend the Icom 706 MK II G untill Yeasu gets the bugs out.

520. Kenwood TH-79A missing memory channel lockout feature. Can it be added?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-08 00:00:00 UTC
From: schubot@rigel.cc.wmich.edu
Message-ID: <f88ARhEnnQwl@puff.acs.wmich.edu>
Source record: 104209

I have a kenwood TH-79A and it appears to be missing the
chennel lockout function. From my research it appears that the
origional 79A did mot have this feature and there is no mention
of it in my manual. However, when I download the current TH79AD
manual from the kenwood site, (the cover page still just says
"TH-79A") it has a paragraph about it and shows the legend over
the 0 key as L,OUT where mine says PAG L. Based on this I assume
I have one of the earlier versions. Is there any way to add that
feature? Is there a processor or firmware upgrade that can be done
to add the "L.OUT" function? (changing the legend on the keypad is
NOT necessary!) I could not find any service bulletins on the TH-79

I also saw some comments about a possible keypad entered extended
tx/rx mod without doing a hardware mod for the TH-79A. Does
anyone have any information on this?

Thanks

WELL, there have been SEVERAL reports in THIS group alone, related to low receive signal levels and outright receiver failures... In view of the newness of the rig, and the relatively limited percentage of their owners to be found here, that number seems sufficient to raise a few danger flags of concern among prospective buyers.

I know it will keep ME from rushing right out to buy one, and I AM in the market for a rig in it's class - right now, the Icom 706llG deems the safer bet...

Hello All,

I have an Alliance HD-73 Heavy Duty Rotator for Sale or Trade.
It is ready for a tower or mast. It will handle up to 10.7 sq. ft.
of windload. Perfect for an HF Beam or what ever else.
It also comes with the rotator control box.

You can see a picture of the control box by going to the following
link:

http://kq6mu.8m.com/pics

Then go to the file: hd73.jpg

This rotator has dual speeds. This does have a brake on it.
The rotator and control box works 100%.
Both are in great shape!!
I am asking $150 or Trade.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

533. Power Station Gel Cell Problems?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-08 00:00:00 UTC
From: mhgates@my-deja.com
Message-ID: <7m35t8$o53$1@nnrp1.deja.com>
Source record: 104222

I am looking for a portable/emergency power supply for my ham rig (handheld RS HTX-202 and possibly a mobile) so I can operate away from my truck and off the power grid (for ARES and SKYWARN). I was recently looking at "THE POWER STATION" 7 Amp-Hr. Gel Cell, and got as far as ordering one from an online secure web site. The supplier (a reputable one, from my research)sent me an e-mail that they no longer carried this item because of "Quality Control Problems." I called the supplier for details, and they said that the Power Stations were, in almost every case, returned by customers as defective (no further info available). The manufacturer refused to fix the problem and they stopped carrying it (it was still on their web site by mistake and they were in the process of removing it). I was very disappointed because this looked like a great solution for what I need. I have not found any postings in this or related newsgroups about this defect. Do you know of any problems with The Power Station? Have you used one with good results? What alternatives might work? Thanks! 73, Mike, KF4UVO.

I am looking for a cavity notch filter or plans for building a notch filter. I am not sure if a single notch filter would be tight enough. I am trying to notch out a undesired signal in band. I run a UHF repeater and I have a bad desense problem. I use a good bandpass notch duplexer and have added a DCI bandpass filter (the repeater is in a very high RF environment). I just found the source of my problems, in band. A near by amateur UHF packet station. I need to notch out this frequency that is only about 1.8 MHz away.

Any ideas???

Mike

Rick:

My "shack" is in a second floor bedroom. I ran a wire from there, down to my ground rod. No big deal. You can use the shield of some old RG 8 coax as the ground wire. Because of the skin effect of RF, I understand this makes a good ground wire. I used #2 wire, because I had a bunch laying around (I am an Electrician). I have used #6 wire, and even #10 with good results in the past.

Hi,
I have a very clean Icom SM-5 desk mic for sale. Works on all Icom HF rigs that use the 8-pin mic connector. Non smoker. Works with these Icom HF radio's, as well as most of the Icom VHF and UHF transceivers (IC-720/725/726/730/735/736/737/737a/738/740/745/751/751a/761/765/781) (IC-27/37/47/28/48/3200A/25/228/229 etc) Has built in pre-amplifier, volume control on the base, gooseneck etc. $55 + shipping.

thanks,
Joe

540. WTD: notch filter or plans for notch filters

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-08 00:00:00 UTC
From: Michael Smith <mjs@nolnet.net>
Message-ID: <Adah3.1179$X3.68022@typ32b.nn.bcandid.com>
Source record: 104229
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.swap,rec.radio.swap

I am looking for a cavity notch filter or plans for building a notch filter. I am not sure if a single notch filter would be tight enough. I am trying to notch out a undesired signal in band. I run a UHF repeater and I have a bad desense problem. I use a good bandpass notch duplexer and have added a DCI bandpass filter (the repeater is in a very high RF environment). I just found the source of my problems, in band. A near by amateur UHF packet station. I need to notch out this frequency that is only about 1.8 MHz away.

Any ideas???

Mike

I just obtained a NIB (or so it appears.. in the boxes) Drake TR-7 and power supply. I see them posted with some regularity, but I'd like to know the difference between the two. Also, does Drake product support these anymore? (e.g.: mod a TR7 to and "A" model). Thanks

The major difference between the TR7 and the TR7A is that the 7A was sold with a lot of items that were options for the 7. Beyond that there really isnt any difference. The TR7A will have been the last radios sold, higher serial numbers.

>

Had a chance to play with a brand new 706MkIIG and a 3 element beam at 30 feet during the 6-meter opening at Field Day. The opening was great but the 706 seemed to be in over its head. Everyone listening to our station was saying things like "My God--6 meters SSB sounds like a contest week-end on 20 meters" I was thinking "My God--Why can't I separate out these signals like I do on 20 meters ? " My rig is an FT-990 with full complement of filters and the 706 had no extra filters so this may really comparing apples and oranges but I was not impressed. Strong signals 2-3 kcs away were wiping me out. At times super strong stations waaay off frequency would blow me away. I want to get on 6-meters so bad I can taste it but I don't think the 706 is the rig for me. They both seem to be great little "do most everything pretty good" rigs but with no desire to go VHF mobile-- I am back to looking at transverters.

I hope I am not giving the 706 a bad rap because with it's many menus, I just may not have figured out all of its secrets. Swatting man eating mosquitoes interfered with the learning curve.

Hi there

I am looking for the Icom CI-V interface programming manual. I have a Icom IC746 and IC820. I wanted to buy the RS746 software from Icom but it will apparently only work with my IC746. I need to control 2 rigs from my CI-V controller which is actually capable of controling 4 but I cannot find a good program on the net that can give me full remote functionaly for both rigs.

I now want to write my own interface but am battling a bit. I have the necessary codes but cannot get the interface to recognize or reply to anything I send to it.

Can someone help or send me a copy of the manual. I believe Icom does not sell it anymore! If you have an Icom dealer near you that sells it I will pay all costs.

I would like to write the program as Freeware and would appreciate any help I can get.

73 - Marinus, ZS6MAW

560. FS IC706 AMPLIFIER INTERFACE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-09 00:00:00 UTC
From: Jack Schuster <w1wef@snet.net>
Message-ID: <37864D8A.6DC8C38@snet.net>
Source record: 104139

W1WEF IC706 AMPLIFIER INTERFACE

To control an amplifier relay from an ICOM IC706, it is necessary to use

the 13 pin DIN accessory connector on the rear of the 706. The 706 can only sink 20 ma max, at low voltage. Most amplifiers require more current than that, and some like the Heathkit amps have 125 VDC or so open circuit which could damage the 706 if connected directly to the radio.

The W1WEF 706 AMPLIFIER INTERFACE plugs into the rear accessory connector, and provides an isolated phono jack to which you can run a cable
directly to the relay connector on any HF/6M amplifier. It can switch up to
250VDC @ 1 amp. ONLY $29 plus $3 S&H.

Order from Jack Schuster, W1WEF, 408 Thompson St, Glastonbury, CT 06033

Some broadcast pirate who wants to do so on the 11 meter band, I'd guess. Seems like a dumb band to do pirate broadcasting, but I guess the FCC would be more likely to leave you alone so long as you had a clean signal.

> letter or so but I would appreciate any help with info on this model i.e.:
> band, channels, power, etc. Thanks in advance.

The Maxtrac D43MJA7JA5_K, if unaltered, is a 32 channel, 45 watt VHF rig capable of coverage from 146.0000 Mhz - 174.0000 Mhz

Also, if the unit is equipped with the 16 pic options connector on rear of rig, chances are high that you have a high-tier full signalling opt unit... Hope this helps...

Regards,

Rick

576. Yaesu FT-10R Receiver Coverage

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-09 00:00:00 UTC
From: Keith Hudson <mkhudson@ualr.edu>
Message-ID: <3786C808.491EBC7@ualr.edu>
Source record: 104155

I recently purchased an FT-10R HT on a visit to California. The unit was a demo, display, or was on consignment, and I got a good price on the HT alone. I purchased the manual from Yaesu (don't bother to get the "Service Manual" as it doesn't tell you very much at all!), and find that the little rig is very nice. My one problem with it: it is advertised as having a wide band receiver, covering 140 to 173 MHz (I think that upper limit is correct). I cannot get this one to take any freqs outside of 144 to 148 MHz, at all. Manual indicates this is normal, BUT the ads and brochures from Yaesu indicate the FT-10R WILL do extended receive. Yaesu technical e-mail also claims it will do it, telling me to reset the rig, and "it should come up" with extended receive. Reset, lost all memories, but alas, no extended receive.

Does anyone know how to get the FT-10R to do extended receive? IS there an "early model" or "late model" that did/does not have extended receive? Any help is appreciated!

Keith

PS Please e-mail, as I don't always get to read the list anymore. Thanks!

>
I don't know where you have been... I posted the directions on getting to
the hidden menu a couple of days ago..... Press A B C at the same time....
turn the radio on. Press the function key until you get the regular menu.
Turn the select knob until you see F1 thru F59 I think.
Either way... turning the signal meter up isn't going to improve reception
any.

The other half of the equation is that the FCC takes
protection of public safety and aviation bands pretty
seriously (and for good reason IMHO), which leads me to
suspect that unlicensed transmision on these bands would be
considered a danger to public safety and welfare....leading
to the common argument that you had better have a serious
emergency AND not have any other reasonable means of
communication available. If possible, I'd put knocking on a
neighbor's door to use the phone, or flagging down a passing
motorist far ahead of using a police frequency, but being
injured in the middle of the wilderness is another matter
to be sure.

Suggestion: Take your ham test (it's really not bad at
all!), and get a 2 meter hand held radio. You'd be able to
have some fun and experiment with the radio, and you'd be
all safe and legal. I bet you'd stand a better chance of
finding someone to talk to than on air band too, depending
on your area, of course.

Wouldn't it also be much better to be able to test out your
commication gizmo before you really needed it? And
finally....you can buy a really nice hand held 2m radio,
new, for less than any airband rig I've ever seen....like
about half.

Sorry for the long winded reply.

I've heard that the strength of the SO-239 connection to the circuit
board inside the radio is weak and stress on the connector can cause it
to break. But if you're receiving OK...?

Hello Everybody,

I have a Ramsey FX-146 2 meter transceiver I want to use on packet with my KPC-3 for APRS, Mir and SAREX. I receive packets just fine, but my problem involves the transmit side of things.

I have my TNC connected to the 5 pin DIN on the back according to the two manuals, and am having a problem. Whenever I have it hooked up to my TNC, the Ramsey rig stays keyed, whether the TNC in powered on or off.

The same thing happens when I have the TNC connected to the MIC and SPKR jacks on the front of the radio.

My questions...

What is causing the Ramsey to stay keyed?

Can anybody tell me how they have their Ramsey and KPC-3 wired?

Can anybody offer any other tips on how I can get these two to operate correctly?

Thanks! Please email me.

Hi Guys!

I have found some notes on this, but was wondering what the most cost effectiuve, best all around antenna for the FT-50RD wwould be.

I saw some comments re: the Kenwood rubber ducky, but cannot find any info on where the operators found those listed for purchase.

I've looked over the HRO catalog for Comet antenna's and have heard the SMA-3 is good (9-3/4") and the SMA-24 (17-1/2" !!).

I've also seen posts claiming Diamond HT antenna's are good but no ref to the model number, gain stats, etc.

Love this little unit! Thx JH -

Off I run - 73 - Ed

<snip>

Yes, it does alpha tags with a max of 8 characters per memory channel. It can
also display both the alpha tag and the frequency simultaniously.

For some 20 years I have been using socalled ``gel cells'' (actually
they are almost always not gelled electrolyte cells, but only sealed
lead acid cells) from surplus emergency lighting systems, with great
success. They usually last about 4-5 years after surplussing, if
care is taken with them. Hook up a pair of blade connectors to
a polarized cable and proper connector and away you go. Charge
them cyclically at C/7 for 130% C time, or float them at C/200 to
C/400 rates, and they will usually do well. Cycle them occasionally
on a load of C/7 to help reduce sulphation due to standing idle.
My usual charger is a 24V bell transformer with a full wave bridge
supply and a 100 watt current limiting ordinary house lamp regulator.
About 75% of the ones I find fresh in surplus work well, and 25% are
sulphated duds. Check around industrial lighting houses or battery
recyclers. I use the 12V 10AH sizes mostly, on everything from hand
helds, to laptop computers, to OT regens, to OT Hartley oscillators,
and they just keep on truckin'.

You probably have a problem with the radio. Or the NB was on. I have used
the GII, the MKII, the plain, and have had no problems.

601. FS: ### MOTOROLA SABER I RADIO

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-09 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19990709114243.07940.00009692@ng-cg1.aol.com>
Source record: 104264

For Sale: Motorola Saber I Submersible, VHF, non-secure

Model # - H99SA052H
Factory ID - H43YBN7139CN

12 channels
6 watt output
136-150Mhz, but I've heard it can be reprogrammed for different bandsplits
CTCSS/DCS/PL/MDC600/MDC1200 capable
Brand new battery & Antenna
Radio comes programmed to your specs

Radio is in excellent shape. It's been used very infrequently. Selling just because I don't need it anymore. This radio is worth over $1200!!! Looking to get only $400/OBO plus shipping. MUST SELL ASAP!! Picture available via email on request.

RADIO IS UP FOR AUCTION ONLINE AT http://auctions.yahoo.com/us/auction/5786541

Please email PDFDISP@aol.com for more info. Thanks!

602. Anyone have a spare TS-140S manual?

Newsgroup: rec.radio.amateur.equipment

I am looking for a Kenwood TS-140S manual, or copy thereof.

Anyone have a spare manual around, or know where I can get a copy?

Also, anyone know how to rewire/fix the extreme on/off sensitivity
of the transmitter drive slide pot? It is almost impossible to set,
easily.

Thanks

Bob Keys/NA4G

Check whether the rig requires positive or negative keying, and which type
the TNC is set to. There is usually a way to switch the TNC between
positive and negative keying, see your manual.

Mike-

I'm not familiar with "THE POWER STATION", but other equipment that contains Gel Cells often gets a bad rap because the Gel Cell dies when it isn't taken care of.

If a lead-acid battery is allowed to discharge, and is stored in the discharged state, it will "sulphate", and no longer take a charge. Unless you use it frequently, you must keep it on a continuous trickle charge to keep this from happening.

Then, when you find you need a replacement for the Gel Cell, it is hard to find one that hasn't gone bad sitting on the dealer's shelf! A few years ago, I needed a replacement Gel Cell battery for a Tandy 1100FD laptop. It seems that Tandy no longer carried them in stock. To be sure they were fresh, they saved up orders until they had enough to justify making a new batch. It took six months before they could fill my request, but I got a good battery.

DXPEDITION TO ST PETER & ST PAUL ROCKS, PY0S, Brazil
==========

Since the cancellation of the dxpedition to the St. Peter & St. Paul Rocks, PYOS, Brazil, which would have been held in January/1999, the NATAL DX GROUP has received many requests for a new Dxpedition, to serve the radio-amateur community worldwide.

We are happy to announce that contacts with the Brazilian Navy, through the Sea Resources Secretariat Comission were made, and two radio operators will be allowed to remain in the rocks for the duration of the ship's stay.

The Brazilian Navy visits the rocks for maintenance their equipment once every six months. There has small wood house. The house is used by geological, biological purposes on that area. The Brazilian Navy stay on the area to control fishing.

During our recent meetings with the Brazilian Navy, NATAL DX GROUP designed two operators for the dxpedition: Karl Leite PS7KM and Pergentino Andrade PT7AA.

It is estimated that the dxpedition will begin between the end of September and the beginning of October. Further information will be given on middle of September.

We will be on the air for 10 consecutive days, 24 hours a day, on 6/10/12/15/17/20/40 and 80 meters band on CW and SSB. Special emphasis will be given to the 40 and 80 meters band. We regret to inform you that there's not sufficient space to erect a 160 meter antenna. By the way, if we will find schematic for a short dipole we will try to built one.

We will use the following callsigns: for SSB, ZX0SK. QSL info: PS7KM. For CW, ZW0SP. QSL info: PT7AA. Both via callbook. Please note that where insufficient postage or no SAE was provided these QSL cards will go via the bureau. As for normal bureau cards these will be processed as time permits. FYI, brazilian bureau is working very bad and slowly under delays.

Hi sir ,
Do you agree with me that many of the complainers should read
therr manuel and instructions "before" shooting around ?

I have a FT 100 . it works well .
But dont expect it hit the ground on the low bands as does its
bigger brother the 1000 MP .
At the end , most complainers will probably never "see" or hear
what they dislike by "looking" to others .
And nothing is perfect , except the Gods . Isn't it ?
73 from a FT 100 owner .
noel In Belgium . bye guys .

Message-ID: <ABMh3.1026$wv2.32003@newsr2.san.rr.com>
Source record: 104084

My only complaint with the FT-100 and it really isn't with the radio itself is the problem I have with fuel pump noise. The local Ford Dealer wants $200 to install the RFI filter on a brand new truck which I feel should have been done in the first place. Other than that, I haven't had any of the problems that other people have experienced.

626. Re: Re: VX-5R and Intermod

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-10 00:00:00 UTC
From: Michael Blake <k9jri@worldnet.att.net>
Message-ID: <7m8sc0$5cm$1@bgtnsc02.worldnet.att.net>
Source record: 104089

I just returned from The Isle of Palms which is a small island about 20 minutes north of Charleston, SC. With the small size of the island you would not expect RF levels to be very high. The main reason I bought the VX-5R was so that I could have 6 meters while on vacation. What a mistake! I took along two antennas on the trip. A Larsen 2/170 mobile antenna on a larsen mag mount and a six meter dipole. With either antenna the radio was almost unusable. With the 2/70 dual band connected I would get very strong paging and television intermod in the 2m band, vhf marine band, 450 GMRS band & FRS frequencies. It did help with the 2M repeater in Charleston as that frequency was not plagued with intermod.

On 6 meters I had a residual S-meter reading of 2 bars and heard nothing. Another local, using an Icom 706, was hearing FM signals every night.

I was quite disappointed and I was well aware of the fact that modern radios have no front end selectivity but this radio is just unusable on an external antenna even when it is only 6 feet away.

The "A" has the NB-7 noise blanker, a 500Hz CW filter in filter position "A", a 9kHz AM filter in position "B", a surge protection device on the receive antenna input to protect from static discharges and a phono jack labeled "TX" has been added to provide transmitter input from audio sources other than the microphone. It is connected in parallel with pin 1 of the front panel microphone jack. The above is paraphrased from my 1978 copyright TR-7/A operator's manual.

I�m looking for a 2m multimode. Can anyone share some real-life experiences (good or bad) on the icom 275 ?? I've read the review in QST and the radio sounds great. Particularly, are there any aspects of this radios design which would/would not make it a good component part of a p3d station. Tnx in advance.

This is it. The BA nostalgia station you've been looking for. 1960's Collins S-3 line. A classic. As used by many of our men in South East Asia, His Magesty JY1, the Senator K7UGA, and even James Bond (ok...maybe a stretch, but I bet Q used the S-line). It works great. Why hold an extra class ticket if you dont run an extra classy station.

Here's what's included:

1. Winged Collins 75S3 receiver with 200 HZ CW filter. S/N 10285
2. Winged Collins 32S3 transmitter S/N 11449
3. Winged Collins 516F2 power supply S/N 5973
4. Winged Collins 312B4 station console S/N 57727
5. Winged Collins SM-2 desk microphone S/N 1649
6. Winged Collins CP-1 crystal pack for general HF coverage
7. Speech Processor -- OEM . Logrithmic AF Speech Processor by NEEE

All in CCA way cool condition. No repaints. Original. I am the second owner (purchased in mid 1980's) Receiver has several of the service bulletins implemented. Some spare tubes. All items include original owners/operators manuals. All interconnect cables included. Station can be demo'd in Portland Oregon or heard on the air any time. Mid life crisis forces sale: I'm on to Harley Davidsons, so this classic from the mid 1960's could be yours. Serious gear. Serious inquiries only, please. Price is firm at $1750 + split shipping (4 or 5 boxes, double boxed).

Sure, you could buy something newer, but nothing like the smell and sound of tube audio and tube RF. Even the neighbors will be pleased by the smooth Collins audio rolling through loud and clear on their TV's and Telephones. If you're gonna cause QRM, do it with the best. Those that know....know. No Lids, No kids, no Space Cadets. (except Wiskey Sixes)

thanks,
Joe K7JOE Collins "Appliance" Operator. Extra Class.
Portland Oregon

The AT-600 is already capable of wide-banded receive out of the box!

To widen coverage range even further turn the radio on and enter the
menu system. (To enter the menu hold down "F" and press the "0" key.)

While in the menu system press the following sequence of numbers:
"1," "4," "6," "2," and "3." You do not need to be in any particular
item on the menu for this to work. After entering this sequence simply
turn the radio off and then back on. The receive range will now be
greatly expanded.

Hello All,

I have a Kenwood TR-9000 2m All-Mode
Transceiver for Sale or Trade.
It is 10 out of 10 Working condition and 8 out of
10 Physical condition. It has FM/USB/CW/LSB modes.
It has memories, RIT, NB, RF Gain, Audio & Squelch
knobs, Scanning feature, 2 VFOs, and repeater offsets.
It has an installed PL Board for Repeater useage.
Also, it comes with a base mic. the BO-9 Base System Unit, &
service manual.
I am asking $325 CONUS only please. Or Trade.
If you would like to see a picture of it, check this link out:

http://kq6mu.8m.com/pics/

Then go to the file named: 9130.jpg

This is the picture of the TR-9130, which is real close the TR-9000.
The only difference that I noticed was, the TR-9000 has a RED display
and the TR-9130 has a green one, also the TR-9130 has a Reverse
button.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

Noise level (and probably with it , sensitivity)
can be changed by turning F03 either ways .
Sensivity and good 'listening' on 40 Meters is improved
bij using the ATT and IPO ...
I'm still pleased with it .
But in the first place it sound not strangled as did the old 706 and
the 570...This is my experience ..The FT 100 has some "air" and space in
reception just as its biggest brother .

653. Re: KENWOOD TS950SDX FREQUENCY CALIBRATION

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-10 00:00:00 UTC
From: Keith Hester <ks9c@chorus.net>
Message-ID: <37873D68.90FEFD94@chorus.net>
Source record: 104175

Hi Ron,

Haven't we gone over this before? Possibly it was someone else...

Anyway... There is absolutely no concern about the actual frequency of the sidetone. It is linked to the 20MHz master oscillator circuit --- any change you make (e.g., using the pitch control), has no effect in the ultimate measurement.

The basic approach for checking the accuracy of the 20MHz TCXO is to first verify the following:

(1) Make sure that when you are listening to the SDX in CW mode that when you close the CW key you hear a sidetone. Regrettably, the level of this sidetone is controlled internally.

(2) Make sure that you can clearly hear WWV on one of its frequencies --- 15MHz is probably the most convenient. You probably should avoid 10MHz when first mastering this technique as internal signals within the SDX might provide a confusing picture.

Assuming these conditions are met...

(1) Tune in WWV --- setting the dial to exactly 15.000.00 (for example); place the SDX in CW mode; select narrow CW filters for 8.83 and 455 (this is to reject the modulation artifacts from WWV).

(2) Close the CW key (to produce a sidetone on top of the tone being generated by WWV). The actual frequency of this tone is of no importance; it in no way affects the accuracy of what follows! Adjust the volume control on the SDX such that the tone generated by WWV is roughly at the same level as that generated by the sidetone (this is done in order to produce a well-defined beat between the two superimposed tones).

(3) Unless the 20MHz TCXO is exactly on frequency, you will hear a beat between the two tones. You can now detune the dial either way from 15.000.00 to obtain a perfect zero beat. The number of Hz you move to obtain zero beat is indicative of the calibration error at 15MHz --- if you obtain zero beat by moving to a higher frequency, this indicates that the TCXO is that number of Hz low. Conversely, if you tune lower to obtain zero beat, the TCXO is high by that same amount.

You should be aware that any apparent "error" in calibration will be directly proportional to the frequency tuned. That is, if the error is measured to be 6 Hz at 15MHz, the same measurement approach will yield only a 4 Hz error at 10MHz, or 8 Hz at 20MHz.

To actually make your measurement in 1 Hz increments (rather than the 10 Hz limitation of the dial), you should depress FINE (allowing steps of 1 Hz) and use the UP/DOWN switch on your microphone to step the dial frequency in 1 Hz increments when approaching the zero beat.

After you have become familiar with what the actual TCXO error is as it varies with time, temperature and humidity, you may decide that you would like to adjust the TCXO such that it is nominally "right on" more frequently than not. If you need help in this regard, feel free to contact me for hints and precautions...

Regards,
Keith

FOR SALE:
WILL NOT SHIP - TOO HEAVY
DFW AREA ONLY

YAESU FT901DM (NON-WARC) $350
WITH:
Hand Mic - Yaesu (stock) no connector
Desk Mic - Shure 526T Series II
Original Manual - Good shape

Radio is in Very Good condition. The Shure Desk Mic is brand new, just installed it 2 weeks ago using the mic connector off the Hand Mic.

Selling the radio because I am going QRP/Homebrew and want to sell off my QRO equipment. I get more enjoyment from building and operating than using commercial equipment.

Willing to discuss trade for other QRP or Kit radios, CW paddles (no Bencher, please), Station accessories, or Pentium Computers. But, would rather sell outright for cash towards an Elecraft K2.

If you would like a full discription of the Yaesu FT901DM, please click the URL below and scroll down to the proper section:

You must have pressed the function button, then pressed the VHF volume control, which will cause PTT to remain on VHF side (or UHF side). To undo it just press function and the volume button of the locked up band. Then you should be able to swap back and forth again. Note dont hold the function button down, just momentarily press it.

Hello All,

I have a Kenwood TR-9000 2m All-Mode
Transceiver for Sale or Trade. Works GREAT!!!
It is 10 out of 10 Working condition and 8 out of
10 Physical condition. It has FM/USB/CW/LSB modes.
It has memories, RIT, NB, RF Gain, Audio & Squelch
knobs, Scanning feature, 2 VFOs, and repeater offsets.
It has an installed PL Board for Repeater useage.
Also, it comes with a base mic, the BO-9 Base unit and service manual.
I am asking $325 CONUS only please. Or Trade.
If you would like to see a picture of it, check this link out:

http://kq6mu.8m.com/pics/

Then go to the file named: 9130.jpg

This is the picture of the TR-9130, which is real close the TR-9000.
The only difference that I noticed was, the TR-9000 has a RED display
and the TR-9130 has a green one, also the TR-9130 has a Reverse
button.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

We have a Mark 4c repeater in Amateur service at 145.39. We'd like to turn on transmit CTCSS (PL) so that our users with receive CTCSS capabilty in their radios can do so. That way the they only hear the our repeater and not the other "garbage" such as intermod and other repeaters on the same frequency 100 miles away.

No where in the manual I have can I find a mention of transmit CTCSS capability or a software command to tell the processor to do that. We have the TS-32 option installed and using it for CTCSS protection on the receiver.

What do I need to do to make transmit CTCSS a reality ?

Hello Ron:

You have the paddle setup for a left handed operator. The "standard" is based on the old "BUG" where you had to really pond the dash dot paddle to get 5 dits at 30WPM. The required more strength so the thumb was used.

No it does not matter. If you go to someone else's station or someone comes to yours just point the paddles away from you and left=right, right = left and you can operate without difficulty.

The correct way is the way that works for you. (nickel answer) Most keyers I have seen set up are the reverse of what you have, but IT IS YOUR KEYER. I have seen people mount a straight key vertically and use either the middle and index fingers to send code or turn it around and send with their thumb. As long as you have a clean fist and I can copy you and the rest of the world has no complaints, what does it matter?

(actually, I would kind of like to do that myself as it would keep other ops from jumping in my chair and trying to run code!)

Good luck, 73...

I am trying to receive RTTY messages with a NRD 545 and indeed I managed
a couple of times to get the RY's and some text using the JRC supplied free
software. But it's more luck then anything else if it works.

Is there someone outthere who has better or other expierience or even has a
method to tune the receiver in a reliable way. The two leds do not give
enough
information and the manual is not clear: at least when I received readable
RTTY
info I did not tune in according the manual but 500 Hz off.

All other functions of the unit seem to work very fine.

Hi John,

I have a jumper made up just for the occasion. It consists of
a stereo phone plug, a stereo phone jack, and the 2 hot leads are
reversed. If I go to another station or if someone comes to mine it
will reverse the paddles. For the past few days, I tried to "learn" to
do it backwards---NG--I guess 20 years of pounding the brass my way
spoiled my brain--I can't change !!!!

P.S. How did you get the 2 Russian calls--your last name doesn't sound
Russian ???

I have a hard to find, not too many of these made STONER HF rig.
This is a very compact, about the size of a TS-50 Kenwood mobile.
Covers 80 through 10 meters SSB only. It's a 12V unit. It has a great
receiver but no transmit. Probably needs a PA transistor. It is
completely solid state with a bright red led digital display. Fix it or
use it as a receiver. $175. 73 Chris VE3NGW/W4 Florida

701. FT-90 audio?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-11 00:00:00 UTC
From: Bill Smith <bs@BSartist.com>
Message-ID: <7m94uk$6jc$1@bgtnsc01.worldnet.att.net>
Source record: 104101

Can anoyone comment on the FT-90 audio in terms of level and quality? I currently use my FT-50 HT in the car and on the boat. On the boat, I have to shut it off underway because I can't hear it at all.

Can I expect anything better from a mobile rig like the FT-90 (or FT-8100 etc.)? Or are the audio levels comparable to the HT?

Or will anything lose out to background noise like a boat engine?

(p.s. I know I can add an external speaker but want to avoid it if I can)

Bill - n2asa

703. Uniden "Force" Land Mobile Help needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-11 00:00:00 UTC
From: Jay Serafin <gdtrfb95@flash.net>
Message-ID: <3788337F.609E2FCA@flash.net>
Source record: 104103

Since my retirement as an Illinois licensed paramedic, due to a debilitating spinal cird injury, I find myself once more working on the Department's radio equipment.

We recently inhereted (donated) a pair of Uniden Force 8 channel diode-matrix 50W VHF 2-way radios. We need to get these set up on 2 additional frequencies, but as there is no documentation with these radios on the programming formulas (and Uniden is NO help, as they state we MUST take them to an authorized service center to have the diode matix boards added!!!!), I need to find out the following:

The diode matrix formula to set up both receive and transmit. I've figured out there are 18 diodes, and no matter how myself, and the other tech have tried, we can't figure out how they're formulating how the diodes are either placed or "cut (actually physically not there), for the existing transmit and receive frequencies.

We need to set these 2 radios up as spare units for out ambulances to contact the local hospital systems and out mutual aid fire-ground frequencies.

Any assistance on how to formulate the diode placement would be most helpful to us.

Thanks in advance for anyone who can assist myself and out Department.

Message-ID: <37885502.484@pv.infn.it>
Source record: 104106

I'm Roberto IK2RND , I have realized a replacement board for EX-314
MEMORY BOARD installed in these Icom rigs :
IC-745 IC-751 IC-751/A ICR-71A/E IC-271 IC-471 IC-1271.
My board called EPROM/RAMBOARD definitely solve the problem related
to the lithium battery fails. When battery fails the rig stop to work and you need
to send your radio or EX-314 board to the Icom service center to replace battery
and reprogram the memory.
Data in the my board are stored in an EPROM chip the RAM is used only to store
The 32 memory channels.

73, Roberto IK2RND

From: Brian <brianburke@my-deja.com>
Message-ID: <7ma9e6ugb1@nnrp1.deja.com>
Source record: 104115

I have a used IC48A for sale. It features 5/25W, 21 memories, ctcss, TTP/scanning microphone, new mounting bracket, and short power cable. Frequency range is 440-450MHz. It does not have a manual, but is simple to program (really). If you wish, I can program in your favorite repeaters before I send it to you.
I purchased it used and it is mobile worn. There are scratches on the case and microphone, etc. The front panel and display look good. It works fine, I just pulled it out of my car Friday evening.

$125 shipped and insured.

Thanks for reading and 73,
Brian/N0iMD

Seems that many folks have been getting blank responses from me...sorry. So I am just typing the item and prices on the news group. If you would like more details please email and I will try to send the detailed list to you. Thanks all for your patience.

Most items are pick up only in Erie, PA

SP-600 JX-26....$315

SX-111...$125

SX-130...$225

Knight T-150A and R100A $225 pair

Morrow Twins MDR-5 and MB-560A w/ homebrew supply $225

Viking II with 122 VFO rough, $140

Eico 730 modulators $100 each

Globe Chief 90 and UM-1, rough $125

Heath ID-4001 Complete WX station $325

Heath HG-10 VFO $95

Heath CO-1 Code Oscillator $50

Heath GR-81 Reciever $125

(2) REVOX A-77 reel to reels $75 pair

Knight Space Spanner $75

Knight Span Master $100

Knight Star Roamer $150

All 3 as package deal for $265

NC-57 $75

NC-105 $140

Gonset GR-212 Receiver , rough $75

Millen R 9er with 20 mtr coil $50

Complete Drake C-line with MS-4, all filters, sherwood mods and 2 new 6JB6's $525

Drake TR-4 and TR-3 with AC-3 as a package $225

GRC-109 "Spy Radio System complete" works well....$250

Shipping and packing are extra if items are shipped. Do prefer pickup for big stuff.

I need a manual or copy of the manual for the LM PA15-80BL 2 meter amp.
it is a 80 watt amp. Thank U Terry. I have looked at some of the guys
sites that sell manuals but it is not listed. 73

721. Re: INFO? Diff TR-7 and "A"?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-11 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <19990711102649.06618.00009480@ng-fg1.aol.com>
Source record: 104121

The TR-7A, and modified TR-7s, do not have a 9kc AM filter. There never was such a filter made for the receiver. What was done in the TR-7A was to put a jumper resistor in one of the filter slots to give it AM reception capability. This is often mistaken as having a filter when in fact it is just the "wide open" bandwidth with the jumper.

73

I see a lot of requests here for manuals. Try the On-Line Manual Vendors
and freebees listed at URL:
http://www.ac6v.com/pageaae.html

Takes some searching but many of the manual requests posted here can be
found at the above URL.

I have no affilation or pecuniary interest in any of the listings.

The FT-90 has excellent audio, certainly louder than an FT-50. The
same goes for the 8100, or just about any mobile radio. However, I
would strongly recommend using an external speaker, even with a mobile
rig for a powerboat application. Use a good quality speaker that can
be mounted somewhere where it can direct the sound towards your ears.
It'll make a huge difference in being able to hear the radio over the
engine noise.

New N.Y.P.D. Radio Plan & Frequencies
By David M Torres, New York City

the following is updated radio frequencie information for the
new york city police dept. they are in the process of re organizeing their
complet radio network which is now in phase 2 of a 4 part phase they
expect it to be completted within 2 years
phase 1 was the re organization of all city wide and special units
phase 2 is the re organization of all division radios
phase 3 will be the frequency expansion and narrowing the band
phase 4 with be the purches of new radios and fadeing out the
motorola saber's the new radio i have bin told is water
prof, bullet prof, weather prof and shock prof from droping
the parts are cheper than motorola
as for the new york city fire department E.M.S. units they are also
re organizeing their radio system from 800 trunk back to a conventional system
they will be useing motorola ASTRO saber's with both EMS & Police frequencies

if anyone knows of any new frequencies such as tac channels from A to E
or what new Tac channels the NYPD division radio have do leet me know i am
completly lost on this subject

i would also like to point ot the phase 2 is not fully completed yet its
a very slow process and it dose take time but it is on its way so the changes
can take place at a blink of your eye

as always happy listening and keep your ears on.....

I have a rs dx-390 receiver. Works pretty good but.....
No BFO. Am reciever works fine but when I put the switch up to BFO no sound. I have tried replacing the switch. No luck.
I guess I need a schematic or help with a fix.

Thanks a bunch...
Please email me.

Hello !

I'm experimenting a problem with my IC-751A (it previously worked well).

Now, there is no reception (or very low reception, Smeter to 0) when in
switched in
NARROW CW mode.
Anyone has got the same problem ? Anyone could help ? Thanks and 73 !

Denis, F6GKQ

I also saw the advertisement in QST and was excited. I then went to the Ten Tec Web site and got the Specs on both the Pegasis and the recently reviewed PC receiver from Ten Tec $300 ??
The specs are Identical. Then i went to the ARRL website and downloaded the review of the Ten Tec receiver. Basically it was OK for a Radio in the $300 class. I think Ten Tec took that receiver an dput a tranmitter in the same box and charged
$895 for it which is 1/2 of a Kachina.
It is a OK deal but the reciver will not be nearlya s good as the Kachina.
Go to the Ten Tec Web site and compare the Specs yourself and then the ARRL Review. Perhaps they improved the receiver??

I'm going to do something I have no business doing--trying to give
help on an antenna question...

If you run a wire 76' to a ground, it behaves more like a wire
part of an antenna than a ground. That is not good.

There was an article in an ancient QST or 73 or somesuch magazine
describing a solution for such a dilema. The solution, as fading
memory serves, was to use coax cable for the ground wire.

It seems to me that the author said to cut a length of coax (type
not terribly important as I recall) to the required length.

Then connect the center conductor to the shield at each end of the
coax through a capacitor (maybe .01 mfd?)

Use this coax/capacitor as your ground wire. It supposedly
fixes the long-wire-for-a-ground problem.

Any of you (other) old timers out there remember that article?

Bear in mind this was a long time ago and there may be a certain
percentage of Budweiser flashback in what I have related here.

Good luck and sorry about the totaly uninformative (but probably
correct) first response I made.

There seems to be far less pros than cons for the FT-100, or is it just that there are fewer 706MK2G users which post their views here?

What issues exists with the ICOM ? I hear nothing bad about it. Surely some exist.

What antennas are being used successfully with each rig?

Could the failure rates be skewed because of less than optimum mobile installations or sub par connections?

I have one dead Yaesu FT-102 for sale as spare parts or ????

Local Board has no 1st or 3rd LO output. 2nd LO is OK. Also digital display is out. I have a counter signal and the gate signal at the counter board but no freq display. Mode display is working (LSB,USB, CW-N, CW-W, AM,FM). Rig died from static strike from nearby thunderstorm (June 99). Rig powers up, AF but no RF. Solid state rig with 3 tube (6146B) final. Rig as optional AM/FM board. Cosmetically an 8 of 10. Comes with copy of Operations manual and factory supplement manual with schemematics. Willing to sell for offer and shipping. Be aware unit weights 34 lbs.

73,
Vince

Hate to tell you this, but only HT that I know of that will meet your
requirements is the Radio Shack HT202 series! I've owned a LOT of HT's in my
time and this one by far is the most "bullet-proof".
Also own the VX-5 and yes, it suffers from inter-mods, but then again it
does more than any HT currently out.
Good Luck,
Dennis/WR4i

Hello All,

I have a Kenwood TR-9000 2m All-Mode Transceiver for Sale or Trade.
It is 10 out of 10 Working condition and 8 out of 10 Physical
condition. Works GREAT! It has FM/USB/CW/LSB modes. It has memories,
RIT, NB, RF Gain, Audio & Squelch knobs, Scanning feature, 2 VFOs, and
repeater offsets. It has an installed PL Board for Repeater useage.
Also, it comes with a base mic. the BO-9 Base System Unit, & service
manual. I am asking $325 CONUS only please. Or Trade.

If you would like to see a picture of it, check this link out:

http://kq6mu.8m.com/pics/

Then go to the file named: 9130.jpg
This is the picture of the TR-9130, which is real close the TR-9000.
The only difference that I noticed was, the TR-9000 has a RED display
and the TR-9130 has a green one, also the TR-9130 has a Reverse
button.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

The pirates are, unfortunately, alive and well on Internet as well as
on amateur radio!

The above item was not published by or on behalf of myself. Any
message issued by me originates via demon.co.uk

However, the place to complain is the Internet Service Provider (ISP) of
the offending user, e.g. 'mcmail.com'. This information can be found from
the 'Path:' field of the full header:

From: bajones@worcester.demon.co.uk
Newsgroups: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,

Xref: vnetnews.value.net rec.radio.amateur.equipment:118235
rec.radio.amateur.homebrew:48411 rec.radio.amateur.misc:184106 uk.radio.amateur:55297

The customary address to complain to would be 'abuse@mcmail.com', and if
that fails, try 'postmaster@mcmail.com'. Be polite, firm and direct.

When you complain here about an individual, you are posting off-topic, which
is also inappropriate to the newsgroups you're posting to. If you have a
net abuse problem, then bring it up in one of the net abuse newsgroups,
where such things are discussed; not here. Complain to the ISP, who can do
something about it, not to us.

-- KD6PAG (Networking Old-Timer, "RF Newbie")

P.S. If the ISP is not cooperative and the abuse is very serious, then
complain to the upstream ISP. There are also some other ways of dealing
with such postings, but such methods may be as questionable as the original
posting...

Attachment: 'traceroute' showing responsible ISP for offensive posting.

FS: YAESU FT901DM $350
DFW AREA ONLY

YAESU FT901DM (NON-WARC) $350
WITH:
Hand Mic - Yaesu (stock) no connector
Desk Mic - Shure 526T Series II
Original Manual - Good shape

Radio is in Very Good condition (9 of 10). The Shure Desk Mic is brand new, just installed it 2 weeks ago using the mic connector off the Hand Mic.

Selling the radio because I am going QRP/Homebrew and want to sell off my QRO equipment. I get more enjoyment from building and operating than using commercial equipment.

Would rather sell outright for cash, but willing to discuss trade for other QRP or Kit radios, CW paddles (no Bencher, please), or Station accessories.

If you would like a full discription of the Yaesu FT901DM, please click the URL below and scroll down to the proper section:

From: mcalhoun@ksu.edu
Message-ID: <7mdj34$94@fox.ksu.ksu.edu>
Source record: 103974

>Just wondering if anyone has experienced these problems with an TS-440AT:
>1. Digital display completely off except for several decimal points....
>2. Long warmup period before radio is functional. (>10 hours)
>3. Incorrect frequency display relative to actual....
>4. Garbled audio (like listening in the wrong sideband mode.)
>Probably the processor but I'm just wondering if there is a history of this?

The problem is NOT the processor, but the phase-lock-loop circuitry, and
MY history with bad PLL's is now two radios long (first a Yaesu FRG-8800
receiver and now my Kenwood TS-440).

In fact, my TS-440 JUST came back from the Kenwood Service Center a few
minutes ago! For "only" $ 37.72 parts
212.50 technical time
and 20.00 shipping and handling, for a total of

$270.22
Technician "Brian" did for me the following service:
"REPLACED PARTS OSC COIL T20, TRANSISTORS Q33, Q34, Q35 ON THE PLL
UNIT, DIODES D44, D46, D48, D50, TRANSISTORS Q21 TO Q24 ON THE RF
UNIT, AND THE MEMORY BACK-UP LITHIUM BATTERY. RESOLDERED PLL UNIT
AND RF UNIT. CHECKED ALL FUNCTIONS & REALIGNED RX & TX AS NEEDED."

My first symptom was a blank display (except for the periods) after about
a 20-minute warm-up. Eventually I turned it off, let it cool, and then
tuned it to (what I thought was) our local radio station at 580 KHz, but
when it id'ed, it was another station on 810 KHz. Since I knew commercial
stations have VERY accurate frequency control, I began to suspect something
real bad! When the station started sounding mushy, I "touched up" the dial
and [eventually] "followed" it all the way down to 540 KHz, at which time
the display blanked again.

My Yaesu manual flat-out told me the display blanked when the PLL failed.
I didn't even look in the Kenwood manual, but just dug the box out of the
closet and sent it in.

I talked to "Brian" when he called to give me the bad news, and asked him
why it cost so much to replace what I figured should have been a bad
semiconductor or two. He said that first the coil went, then it took out
a transistor or two.... Eventually, it became more cost-effective to
simply replace lots of parts instead of having them fail later.

Sigh. You can tell the men from the boys by the cost of their toys.

mikewktla@aol.com (MIKEWKTLA) writes:
>The contactor type isolator works great,
>it was an option on my early 80's Ford Van.

My local auto-supply store called it a "continuous duty solenoid" and charged me $21.58 back in 1996 when I added a second battery (for my radios, which I always seem to leave turned on!) to my old pick-up truck.

While I was at it, I installed another starter solenoid to the "radio battery" and connected it to the ignition switch with a DPDT-center-off switch so I can CHOOSE which battery I'm starting from (handy if/when the "truck battery" fails). I used the other pair of "poles" on the switch to show which battery I'm starting from via old "war-surplus, press-to-test" lamps on the dash.

Although I've never felt that I've needed to do it, the "center-off" switch permits me to start the vehicle, throw the switch (which is hidden under the hood) to the center position, and then drive to my destination. There, after I stop the engine, it can't be restarted (unless someone could get under the hood and jump-start it) until the switch position is changed. Sorta an "anti-theft" switch.

Finally (?), I installed one of those little $10 DVM's and a switch in the cab so I can read the voltage on either battery. It's almost fun to monitor my "radio battery's" voltage while I'm operating (with the engine off, of course).

AT-600 Modifications

Currently there three different versions of the ADI AT-600 firmware to hit the States. I understand that another new version will soon be on the way. Which firmware version you have will affect how difficult expanding your rig's transmit range is.

Prototype (firmware 1.00) and early production versions of the radio (firmware 1.10) were capable of accessing very wide expanded transmit merely through a software (i.e. keypad) modification. Using the keypad mod on newer versions of the radio (firmware version 1.20) extends the transmit range only very slightly. You must perform the hardware mod on the radio in order to access complete expanded transmit. The newest version, firmware 1.30, will restore the ability to access out of band transmit from the keypad.

How do you know which version of the firmware you have? Try performing the keypad mod on the radio. After you enter the last step of the mod the display will read:

KEY OK!
Ver #.##

Now, on to the mods! (NOTE: In the U.S. it is illegal to use this radio on any band for which it is not type accepted and on which you are not licensed. Perform these modifications at your own risk!)

SOFTWARE MODS:

STEP ONE: First enter the menu mode by pressing (F) and (0 SET / SB) at the same time. Enter the following sequence of numbers: 1, 4, 6, 2, and 3. Turn the radio off and then back on.

STEP TWO: After performing the above modification continue with the following steps to expanded the radio further: Enter menu mode by pressing (F) and (0 SET / SB) at the same time. Enter the following sequence of numbers: 1, 4, 6, 2, 3, 1, 1, 2, 8, and 9. Turn the radio off and turn it back on.

HARDWARE MODS:

MOD #1: Open the radio and remove Q220 from the printed circuit board. Replace the radio cover. Turn the radio on by holding down (F), (LAMP), and

(5), and pressing the (PWR) button.

MOD #2: Open the radio and remove Q220 and Q221 from the printed circuit board. (You do not need to remove Q220 if you already removed it by performing Hardware Mod #1). Replace the radio cover. Turn the radio on by holding down (F), (LAMP), and (5), and pressing the (PWR) button.

WHAT THESE MODS DO -- Ver 1.00 and 1.10

SOFTWARE STEP ONE: This mod expands the receiver to cover 100-199.995, 330-499.995, 830-868, and 896-999.995 MHz.
SOFTWARE STEP TWO: The transmitter will be opened up to cover 100-199.995 and 400-499.995 MHz.
HARWARE MOD #1: The radio is expanded to transmit from 138-174 and from 430-470 MHz and receive from 130-174, 350-470, and 900-985 MHz.
HARDWARE MOD #2: The radio will transmit from 100-199.995 and 400-499.995 and receive from 100-199.995, 330-499.995, 830-868, and 896-999.995 MHz.

WHAT THESE MODS DO -- Ver 1.20

SOFTWARE STEP ONE: This mod expands the receiver to cover 100-199.995, 330-499.995, and 896-999.995 MHz.
SOFTWARE STEP TWO: The transmitter will be opened up to cover 142.5-149.5 MHz. The receive range and UHF transmit range remain unchanged.
HARWARE MOD #1: The radio expands to transmit from 138-174 and from 430-470 MHz and receive from 130-174, 350-470, and 896-999.995 MHz.
HARDWARE MOD #2: The radio will transmit from 100-199.995 and 400-499.995 and receive from 100-199.995, 330-499.995, and 896-999.995 MHz.

WHAT THESE MODS DO -- Ver 1.30

Version 1.30 has not yet been released. The ranges listed below are what sources within ADI / PREMIER expect the new firmware version to cover. However, these ranges may be changed before release and the infomation here is subject to change. Radios with firmware version 1.30 should ship sometime in late June of 1997.

SOFTWARE STEP ONE: This mod expands the receiver to cover 100-199.995, 330-499.995, and 850-868, and 896-999.995 MHz.
SOFTWARE STEP TWO: The transmitter will be opened up to cover 100-174, and 420-470 MHz.
HARWARE MOD #1: The radio expands to transmit from 138-174 and from 430-470 MHz and receive from 100-174, 350-470, 850-868, and 896-999.995 MHz.
HARDWARE MOD #2: The radio will transmit from 100-199.995 and 400-499.995 and receive from 100-199.995, 330-499.995, 850-868, and 896-999.995 MHz.

CELLULAR MODIFICATION:

To my knowledge there is no way to modify the the U.S. version of the AT-600 for cellular receive. The AT-600 was designed to specifically not support receive on these frequencies, although the European version of the radio (AT-600D, for "Deluxe") does have this capability.

A NOTE ABOUT THE HTX-204:

Yes, ADI also designed and manufactured the now no longer available HTX-204 for Radio Shack. For all intents and purposes the radio is essentially the same as the AT-600. The two radios have nearly identical physical appearance, but they do have some slight differences in features: the AT-600 has more of them! For complete details on the differences check out AD7K's usenet posting!

The Radio Shack HTX-204 can be expanded using the above modifications. For the exact frequencies it can be programmed to cover see Firmware Ver 1.10 above.

Back to home

779. can someone identify this HT ???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-12 00:00:00 UTC
From: mcalhoun@ksu.edu
Message-ID: <7mdlhp$t5@fox.ksu.ksu.edu>
Source record: 103979

My wife's been looking for a **SMALL** HT (but NOT one of those "micro-power ones!) and I saw one at last Saturday's Kansas City hamfest, but I didn't have enough cash with me and the seller (an individual, not a company) wouldn't (or couldn't) take plastic. I was so disappointed that I didn't even write down the name of the HT's manufacturer, but now I'd like to know what it was. Maybe someone can ID it from this brief description of some of its distinguishing characteristics:

BNC antenna connector on top, also
12-volt input, and
Speaker and mike jacks on the top.
The battery fastened to the BACK instead of hanging on the bottom.
2-meters only (I think, but not real sure).
PTT button on the side (as usual) but
Only about 4 buttons on its face (very UNusual, at least to me), and I recall they were not all the same color: Supposedly it could do Touch-Tone (R) dialing, even without the usual 0-9 buttons; the seller told me it was programmable even to the extent that phone numbers could be "memorized".
Seller was asking $145 for radio and one extra battery.

If anyone has any idea of what it might have been, I'd appreciate email.

Actually, it's just that the Icom has been out lots longer, and has
been pretty well de-bugged - tho it STILL has several significant weak
areas that affect some users

Message-ID: <378A797F.DD159060@erols.com>
Source record: 103986

Myron:

Sounds similar to (but not identical to) an ICOM 2iA. However, this one has a battery pack that inserts from the bottom (not a slide on). It has a diminutive size 2x1x2.5" and runs a few watts on high power. I bought my wife one some time ago, but when we went overseas, it got packed away and I ended up buying a couple of IC-t22's. Now we have an extra.

Hi All,

I just bought a used MC-60A Kenwood microphone on Ebay. It has
the amp in the base, with the on-off switch on the bottom plate, and
the instruction sheet says MC-60A in big letters on top. It has the 8
pin cable. However, on the microphone base, above the up button, cast
into the base, it says MC-60--not MC-60A. Is there anyone out there
who bought their MC-60A new--What does yours say ???

792. Re: Help with FT 301 Please

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-12 00:00:00 UTC
From: Andrew Thall <thall@icsi.net>
Message-ID: <8_wi3.18181$IS6.10285@mercury.intnet.net>
Source record: 103992

You're note shook some cob webs from my brain. Many years ago, I used a home-brew AFSK through the mike jack (at about 25 watts out) and a home-brew demodulator for rtty. I presume you have the 100 watt version of the 301. For Rtty, you need to cut the power way back or you'll fry the finals.

I would think that any of the more modern terminal units would feed afsk through the microphone and use the speaker out for demodulation. I also used an opto-isolate keyer to hook up my old apple II computer for cw. It used a reed relay and an infra-red diode coupling to key the rig. I'm sorry, but its too many years ago to remember the circuit very well.

Good luck

Andy, WS7J

793. Need help w/ HTX-202

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-12 00:00:00 UTC
From: CessnaPilot@webtv.net
Message-ID: <19188-378A96AA-77@newsd-133.iap.bryant.webtv.net>
Source record: 103993

I reset my HTX-202 by holding down the FUNCTION button and the CLR button, then turned the switch ON.

It reset to factory defaults, one of which was the "CALLING FREQUENCY". It reset it to 146.000.

Comes me, to set a new "CALLING FREQUENCY" into memory as per the manual: 1. Press VF
2. Tune to desired frequency
3. Press CA

When I do this, the unit recalls 146.000 which became its default when I reset it to factory settings. Pressing CA always takes me back to 146.000 in spite of what the manual says about changing the 'CALLING FREQUENCY".

Is step 3 in the manual a misprint? If someone has experience with a HTX-202, I'd sure like to hear from them.

I took it to Radio Shack for help, but the kids working there had never used a ham radio and suggested that I find a ham with HTX experience to offer some advice. Anybody?
Thanks, Johnny KF4WWF

I have an as new 4 month old Icom IC-2710H dual ban mobile radio. This is Icoms top of the line dual bander. It comes with the HM-98 multi-function remote control microphone and has a detachable face. This radio has extended receive right out of the box. The radio is a 10 out of a 10. I have the box, owners manual and a sales brochure. $350.00 plus shipping. E-mail me at: n8ihs@flash.net

810. Value of "project gear" TR-7A, PS-7, and SP-75?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-12 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <19990711210254.07149.00010886@ng-bd1.aol.com>
Source record: 104078

From an estate I bought a TR-7A, PS-7, and SP-75 speech processor, with knowledge that the transciever did not work properly. Cabinets are above average. I was to be laid off and thought this would be a good project radio. Layoff was delayed until September or beyond so I won't have time for this type of project. Speech processor has an added 4 pin mic connector on the rear. TR-7A has added 4 pin mic connector on the rear but not connected to anything electrically. I've decided I might put it up for auction on Ebay. However, I might part out the individual units according to 500 hz filter, 2.3kc filter, noise blanker, power supply, speech processor, and the TR-7A less the previous. Anybody have a good idea of what these parts might be worth? I'd rather keep it toghther for sale but not sure that is wise considering it's condition.

73

Evan

811. FS: ICOM IC-Z1A DUAL BAND HT

To complicate matters, I had 2 Kenwood MC-60 microphones that were clearly labeled as such, both were amplified and both had a 8 pin plug. This is to say that I really can't answer your question. Some hame were telling me that the A meant amplified and others said that A meant a 8 pin connector. Maybe Kenwood would have an answer, I hope so.

Phil,
The QRZ web page has the mods for this radio and the 204
ADI-600HP mods will work through ver 2 I've used this on my
new ver 2 radio. Opens it right up.

Thanks for the reply, Bob!

I'm going to add your answer to my tech folder as well
(please see my reply to Fred). Sounds like it's a pretty
reliable power source. I've done some correspondence with
The HamContact and have decided to buy a Power Station
from them. Not only do they have the best deal I've found
on this item, they take extra care to ensure it is
working properly before shipping.

I've seen their Ads in QST for several years, but their
web site is a new resource http://www.hamcontact.com/
It includes great technical info on their products.

Thanks again for the information.

73,

Mike, KF4UVO

Source record: 103885

Hello,

I have for sale a Yaesu VX-R1 dual band handheld for sale. It has been modified to tx out of band. It comes with a Comet SMA-3 duckie antenna which works great. It also has the new "Motorola belt clip & Yaesu's CSC-71 protective case. The box is mint and the manual is near perfect. Stock Lithium-ion battery lasts forever and recharges in about 2 hours or less, there is now memory...

This radio works great, there is nothing wrong with it, not really excited to sell, just need the little extra money for another project...

All goes for $150.00 + shipping

Thank you

821. Trouble with noise/RFI from UPS device - anyone know how to fix?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-13 00:00:00 UTC
From: "Frank C. Van Cleef" <vancleef@snet.net>
Message-ID: <7mfldr$1vk@news1.snet.net>
Source record: 103889

I recently installed an APC 700VA UPS to keep the computer and Winlink MBO in service should the power fail. Much to my dismay, the UPS appears to radiate considerable RFI on 3.6 and 7.1 mhz! The noise is about S7, well above the normal band noise which runs around S0-S1 here, and sounds like AC hash. Turning the unit off from the front panel does NOT stop the noise, but un-plugging the cord to the computer gear (the only cord used with the UPS) from the back panel of the UPS does stop the noise. Tried one ferrite core around the cord but it didn't make a dent. Has anyone out there had this problem and if so were you able to do anything about it??? TIA,

Van

> using that unit?
>
> Cheers,
> --Weiyun

The VX-1 does only have 500mW (1W max) but it is also much smaller,
lighter,
and less expensive than the VX-5R. With the new price reduction, it is
a
little over half as much as the VX-5R. It's not the best radio if it is
your only radio, but as a secondary radio for RX, it's great.
Also, as a secondary radio to a mobile radio capable of cross-banding,
the
VX-1R is a great little radio to cross-band from.

Just because one person refused shipment does not make the rest of the
hams that only purchase COD a bad risk.
If you are paranoid about sending COD think how paranoid hams will be
sending you money without seeing any merchandise.
Try this: Tell the person requesting COD to send you the shipping
charges in advance. That is better than just refusing to ship COD.
There are more honest hams out here than dishonest.
Happy Hammin'

828. FS: Kenwood 2m All-Mode

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-13 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <378b7d19.6648401@news.hughes.net>
Source record: 103896

Hello All,

I have the following for Sale or Trade:

Kenwood TR-9000 2m All-Mode Transceiver.
RED Digital display, FM/USB/CW/LSB, Memories,
RIT, RF Gain, Hi/Low power button, Noise Blanker,
Scanning Feature, -/simplex/+ repeater or simplex switch,
Volume & Squelch knobs, & 2 VFOs.
This rig is in great shape. Works GREAT. Does
have some minor scratches. Comes with Sevice Manual,
BO-9 Base Unit for the radio, installed the Communications
Specialists TE-32 PL Encoder (goes for $50) for repeater access,
and Base mic. Asking $325, CONUS only please.

To see a picture of the rig, go here:

http://kq6mu.8m.com/pics

Then go to the file named: 9130.jpg

This is a picture of the TR-9130, which is really close to the
TR-9000. The differnce is that the TR-9000 has a RED display
and no reverse button.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

What I am looking for trade: VX-5R, other VHF/UHF gear and HF gear.
Thanks & 73,

Mike Green KQ6MU
DM04 Palmdale, CA

I had a look inside one of these portable supples once - about 5 years ago I think. Large yellow/grey case. Don't know if it is the same type you have seen.

I took it back immediately for a refund. The 7AH battery was in fact a 6AH one, with a poor attempt to cover that fact up, the construction quality was very poor. I would recommend you make your own, but I have one of the smaller ones, black with a built in handle and two sockets on the front covered with rubber bungs. That model is well made and quite good considering the limitations of the battery, it was very good for powering a laptop PC for a contest. The gell cell is loosing it now; that is to be expected as like all lead acid units they don't last forever.

Mike

If you don't mind homebrewing, my web page describes my quest for a 2m
half-wave dipole.

A while back, in rec.radio.amateur.antenna, there was a discussion
regarding soldering some piano wire into a BNC connector.

It works.

I used a crimp-type BNC connector, a stub of RG-58 coax and
rubber-coated wire shamelessly "harvested" from a pair of poor
headphones.

Basically, you strip the coax just like it's going to go into the BNC
connector; then, (carefully) rip out the center conductor. The
resulting hole will (tightly) fit the 0.030" music wire. Push it
through and solder the BNC pin. stick the coax assembly into the BNC
and crimp it. Solder the headphone-wire onto the crimp, and wrap with
electrical tape, or heat-shrink tubing or something.

Then, it's Miller Time.

BTW, you'll still have to use one of those BNC-to-SMA adapters;
they're about 9 dollars (American) from HRO. If you want to use SMA
directly, you'll have to mail-order the connector.

Well, I've been pleased with mine. I rely heavily on the local repeaters,
but that's not been a problem. I'd like 5W, but it's smaller than the VX5R
and substanially cheaper.

Richard, I used the VX1R I had for a radio to crossband to my dualband
radio in my house or auto, also I used it for a pocket scanner in the
850 mHZ range. also for listening to WideBand FM Broadcast Stations.
I also could access 7 repeaters here in Little Rock, AR. I might also
ask what are gonna do with 6 meters FM in an HT anyway if you got the
VX5R?

Can anybody explain what's going on with the dual VFOs in terms of signal sensitivity? The QST review give two VHF sensitivity figures, one for VHF "default" and another for VHF "alternate" or "opposite" or something (sorry, I don't have the review in front of me.) Is either the right or left VFO the "default" or main VFO which has better VHF sensitivity?

Actually most smaller rigs now have keyers since it's fairly easy to
incorporate them into the radio. :) But it is true, many do not have tuners
built in which can be a pain. The only thing that I think that sucks generally
about smaller rigs is that they have to generally "menuize" everything
since space is a premium.

Hi Guys!

Recently got this little cutie and am loving it!

I am wondering if the CW ID feature can be used somehow to audibly
listen to morse for practice?

ie: Put in a group of chars, hit a button and be able to listen and
work on recognition of thsoe characters.

thx - 73 - Ed

Radio Shack Pro-62 handheld scanner. Covers 30-54mhz, 118-174mhz,
380-512mhz,
806-823.9875mhz,849.0125-868.9875,894.0125-960mhz.
Recieves in both AM&FM, selectable. Also has Triple Conversion reciever
and hyperscan.
I've compared the reciever to my $400 BC9000XLT and its hotter than the
Bearcat.....
It shows some wear, but does NOT lack performance!!!!
Great little scanner. Comes with new AC charger/power supply, and
nicads.
$135 shipped

Source record: 103918

Many thanks to all who emailed me and responded here with solution... some emailed with a request to forward the solution to them as they were having the same probem understanding the manual's intent.

One other thing..... I am told that most repeaters require a "sub audible tone" to open the squelch and activate the "machine". In my pocket directory, no such tones were listed, only a table of codes in the front of the book.

For each repeater, I suppose a unique code is assigned, but we aren't told what it is. The HTX manual only says that if a tone is required, then it MUST be entered into the programmed selection of that frequency or the repeater will ignore your signal. I was stymied.... I don't know which code to enter for each repeater pair that I might program into the HTX.

Out of curiosity, I entered a pair without the code and tried it anyway, and you know what? The repeater opened and relayed my transmission, "KF4WWF monitoring" so I guess one of 2 things:
1. The code isn't necessary after all.
2. The HTX intuitively somehow sent the proper sub-audible tone without my having to enter it.
If number 2, I'm impressed. (The magic of radio?)

The first time I used my radio, I was marvelling at being able to QSO with another station over 100 miles away. I am still astounded that a little handheld can communicate so well, considering every walkie talkie I ever saw would be limited to about 1-3 miles.

The repeater I hit is about 40 miles away on top of a mountain... takes me an hour to drive there.. that in itself seems incredible to me and I said so on the air. (WOW)

Comes these fellow hams the next day talking about the "Idiot" that didn't realize it was the power of the machine that was responsible. But it takes 2 to tango.... and I thought it was a fair assumption to consider all this an impressive accomplishment.

I am kind of reluctant to air my call sign again because I've been dubbed the local idiot for being amazed at the repeater system and my little handheld radio.... Maybe after everyone forgets about this, I'll do it again and just sound like nothing should impress me .. yes?
Thanks again..
Respectfully, Johnny

From: Ralph Mowery <rmowery@ibm.net>
Message-ID: <378BEADC.5A59809D@ibm.net>
Source record: 103926

Zero beating a signal seems to have almost became a thing of the
past. It used to mean that as you tuned past a signal, the pitch
would go from a high tone to a low tone, disappear (the zero beat
frequency) and go from a low tone to a high tone. This was mostly
with receivers that had a BFO in them .

With the ssb and cw filters and product detectors in most of the
receivers now you only get the high tone to low tone or a low tone
to high tone and then the other sound you used to hear is filtered
out or missing.

Source record: 103927

Hi,

I have a pair; 102 and 105 firmware. I wouldn't rely on them to reach a repeater in another city; but couldn't replace the wideband receive capabilities that the VX1R offers for 3 to 5 times the price. The availability of frequency agile 800 MHz units is becoming increasingly scarce. Also, the freeband software mod adds 220 MHz operation at reduced performance; rendering a triband unit with an average 175.00 (or less) price tag. With the Y2K mystery hovering within our view, it may prove to be nothing short of a lifesaver with it's expanded range of both reception and transmission. You may be suprised to see how far 500mW may reach when over 90% of spectrum debris is not operational due to power grid failure. Only time will unveil that scenairo.....

I am trying to set up an HF station so I need a little of everything. I have the following for trade.

Apple IIGS 1.25 meg color monitor several disks plus lots of software. Works and a GOOD keyboard (the weak point).

Apple IIGS 8 meg 20 meg HD color monitor plus lots of software and also a GOOD keyboard. ("WOZ machine")

Both have system savers and are cosmetically nice. All cables etc. Software is generally original and no longer available. Word processors games graphics.

Macintosh Performa 200 with a 20 or 40 meg HD and a bunch of software. Looks like a "classic" mac. Nice keyboard about as powerful as the SE etc.

I am looking for things like antennas, coax, swr meters, HTs or other similiar things that wouls be useful in setting up a station. I am open to trades.
Thanks
Jim kk6cc

873. VX-5R vs. IC-T81A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-13 00:00:00 UTC
From: mikrounit@hughes.net
Message-ID: <378ab406.39274016@news.hughes.net>
Source record: 104012

Hello All,

I am looking into buying a new HT soon.
My choices are the Yaesu VX-5R or the Icom IC-T81A.
I know a lot about the VX-5R. I have even played
around with the VX-5R, and I gotta say what a sweet
radio it is!!! Sooooo small!!
But, I have just begun looking at the Icom IC-T81A.

That is the new 6m/2m/440/1.2 HT.
I have not seen, heard, or read anything about this
HT, other than what is on Icom's website.
I would like to know which HT is better for the money.
I love Yaesu, and they have a really good reputation.
I currently own a FT-50R, but am looking to upgrade.

Is the VX-5R the HT to get, or the IC-T81A???

According to AES prices, the VX-5R go for $359.95 and
the IC-T81A go for $399.95.
So, for $40 more I can have 1.2 as well!!
Is the rig worth it?? How does it perform?

What are your thoughts regarding this??
Please let me know.
E-mail me if you can help me.

mikrounit@hughes.net

Thanks & 73,

Mike Green KQ6MU

874. FS- RF Concepts 2-317 170 watt 2mtr all-mode

Hi Fellas;
I have for SALE:
RF Concepts model 2-317 VHF ALL-MODE Amplifier for 2 meters with paperwork.
I tested it with an FM H/T and 3 watts in gave me 23 watts out.
Supposedly 30 in gives 170 watts output. The Amplifier is in almost mint condition.
I have not noticed any delay when switched into the ssb mode so am not 100% sure if the delay is operational.
Price is $150ppd Conus!
Thanks es 73....Rich WA2RQY (1961)

Phil;
Your description is correct; the .01 caps should be 1KV or higher. Any old coax fits the bill. While originally for 2nd story hamshacks, I still use one from my amplifier ground to station ground.

For those needing the caps, check www.wireman.com for a pair of them.

The kit is ~$110 with case boards and all components except ants. It
looks very complete. A silk screened front panel (very professional) is
available from the author of the QST art. Hopefully will put it
together as soon as I fix my soldering station (HI!)

Ramsey is making a kit based on the unit featured in the last couple issues of QST. The article has enough info to make your own if you want to go that route. I hope to get my Ramsey unit finished in time for our hunt this weekend.

As to antennas, my favorites are the ones made from pvc with metal measuring tape for the elements. They are detailed on a web site, but I don't have the url handy. If you don't find it with a simple search let me know and I'll send it to you. If you have a dual band receiver, make yourself a "440" version of the tape antenna. You can hunt for the third harmonic when you get in close. It works great.

I wonder why Kenwood didn't allow the Comb filter
to be switched off when in CW mode? The menu #18
only switches the comb filter on/off in SSB RX. I
find this a real nuisance when using FFT software
to look for weak signals on EME because the comb
filter response shows up and the notch in the comb
filter gets in the way.

>Curious, what are the weak areas in the Icom 706? Does it receive well
>on HF?
>
>(I've been thinking of upgrading from my trusty Icom 735.)

I have both radios. The IC706 is *much* worse than the IC735.
The IC706 front end crunches with strong signals on nearby
frequencies, and there is a significant amount of filter blowby.
Neither problem is easily fixed (other than by using a low
efficiency antenna, which tends to minimize the problems
by reducing signal levels, that sort of comes with the territory
if you're intending to operate mobile).

The noise blanker doesn't work properly (that can be fixed).
And obviously the thermal design won't let you run cool key
down the way you can with the superb IC735. OTOH, it is very
small, and you can remote the head, so it fits many mobile
installations better than the larger IC735.

If you've got the room to run the IC735, and don't absolutely
have to have VHF/UHF all mode in the same box, I'd stick
with the IC735. You'd definitely be trading down in terms of
HF performance if you went to the IC706. (the VHF/UHF
performance of the IC706 isn't that great anyway.)

I'm keeping mine for mobile use, but it doesn't stand a
chance of displacing the IC735, IC275H, and IC475H
in the shack. If you want an all in one box and can stand
a somewhat larger package, the FT847 is better than the
IC706, though still not as good as separate rigs. (I have
a FT847 too, and it is a competent VHF/UHF all mode
that happens to also do HF.)

If HF performance is of prime importance to you, go with
an IC746. It is quite good. If money is no object, then go
with one of the top line radios such as the FT1000D
or IC781. Otherwise, stay with the excellent IC735. It is
still a very good radio after all these years.

895. IC-2AT battery question???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-14 00:00:00 UTC
From: Bill Crann <bcrann@nf.sympatico.ca>
Message-ID: <378cb443.0@209.128.1.3>
Source record: 103734

I was wondering what is the maximum voltage battery pack I can use on this radio? Does the battery pack from a HTX-202 fit this radio? Can I use the radio while it is charging? Can I hook it up to an external 13.8V power supply? Sorry for all the questions but I am fairly new to Ham Radio and just bought this radio used with no manual, so I wouldn't want to break it first thing.

Hello. I have a 23A Continuous/25A Surge DC 13.8V Power Supply for sale. The price is $115 shipped UPS Ground and insured. This P/S is very compact and perfect for base or portable operation. Would be an excellent choice for Field Day. I have used this P/S in several HF Worldwide Contests and it held out fine. This P/S has at the same time powered an Alinco 2m HT, a Kenwood TS-140S TXing at full power, and the meter in a Vectronics HFT-1500 tuner. Lighted power switch and built in cooling fan. Comes with AC power cord, manual, and original box. This P/S works 100% and it's looks are around 85%. Only about 1 year old. Let me know if you have any more questions or if your interested in buying. Thanks!

146.940, 146.670, 147.300, 444.200, 443.200 and 147.135 repeaters are
all on the same hill 10 miles northwest of my house and the 444.300
repeater is 20 miles southwest of me in Bryant AR.
the 444.300 repeater is probably the one farthest away that I can reach
with the little VX-1R I am 300 feet above sea level and the repeaters
west of town are about 1000 feet above sea level.
I would not make the VX1R my only HT but if you have to talk any farther
than that I would need a 50 watt mobile anyway. The difference between
.500 watts and 5 is only about 1.5 s-units anyway. The best ht's I have
ever owned so far is the TH-78A Kenwood and the Icom W-32A 5-watt.

I used to do HF from a second story apartment with an Icom 735,
running 100 watts out.

An excellent tiny antenna is the Barker & Williamson AP-10, a little
51" whip you mount on your window sill, and then you run a piece of
counterpoise wire through your apartment. You adjust the length of the
counterpoise to tune your antenna to each band. It works 40 meters
through 2 meters, and I actually got out on 40, doing quite well, with
low swr. (Amateur Electronic Supply sells this antenna; it's in their
latest catalog.)

I used the MFJ Artificial Ground to try to cut down on rfi -- with
only limited success. There's just a lot of rf floating around if you
don't have an outside ground, and you're on the second floor, and that
was my situation.

You can also run counterpoises off of your equipment, stringing the
wire through your apartment to alleviate rfi. Check the ARRL Radio
Amateur's Handbook for advice on grounding an up-in-the-air station.

You may have to simply operate while everybody else is asleep :-))

Or go for lower power on the VHF bands and work into the FM repeaters.

Hello,

I have a Kenwood TR-9000 2m All-Mode rig for Sale or Trade.
It is in 100% working condition. The radio does have some minor
scratches on it.

Main Features:

RED Digital Readout, Split (-/S/+), memory channels,
FM/USB/CW/LSB modes, RIT, Noise Blanker, RF Gain,
Scanning Feature, Hi/Low Power Settings, and 2 VFOs.

Accessories with the package:

Communications Specialists TE-32 PL Encoder
installed

BO-9 Base Unit

Base Microphone

Service Manual

Everything works great!
I am asking $300 for all plus shipping
to CONUS only please.
If you are interested in it, please E-mail me or
call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

Well, from town here, I can reach a repeater about 15 miles NE of here. The terrain around here is rolling hills (BIG hills, 100 to 200 ft top-to-bottom); the repeater is up on a butte that rises 600 to 700 ft above the surrounding hills. I don't always have a clear line-of-sight to the repeater, but I can usually make it even without. (Once I hiked up to the top of the butte and keyed up the repeater about 30 miles to the south, but I suppose that's cheating).

I live in a town of 20,000. I used it once in Boise (~100,000) and had a similar range (10 to 15 miles). Again, with the repeater up on the mountians to the north, that's no surprise.

>73's Tim

It was basically the same receiver as the RX-320 in the unit displayed at Dayton,
but with several more DSP filter options. I talked with them at some length about
making some improvements before Pegasus is released (mostly changes to the
analog front end to make it stouter, and to the *analog* PLL to make it quieter).
You'd think TenTec would have that down since they've always been good in those
areas. As you note, the RX-320 isn't very impressive as a serious communications
receiver. IMHO it was designed too much to price, not enough to performance, but
it *is* aimed at the beginning SWL, not the ham. That's not the sort of receiver
we want in an amateur transceiver. We need more than just more selectivity
options. We need greater dynamic range and less phase noise too.

They say that the Tx PA in the Pegasus is the same as in the Omni series,
but the transmit IMD specs aren't as good (don't know why that's so, but I
raised that issue with them too). I wouldn't mind seeing the price go up a bit
to improve those things, there's such a thing as penny wise and pound foolish.
I think they could fix the problems and still stay under $1000.

At Dayton they were coy about releasing the programming API for the radio
so that third party software could be written for it. I beat on them pretty hard
about that, pointing out that they're in the business of selling radios, not software.
It seems that they took that to heart since their webpage now states the API
will be documented and released. One small victory.

As it stands, the Kachina 505 is a much better radio, but if TenTec fixes
the problems I noted, and keeps the price under $1000, I think that they
might have a very interesting product. It could be an experimenter's delight.
While their box is smaller than the Kachina, it has lots of empty space
inside. Whether that's the result of higher integration or less sophisticated
design, it does mean that we've got plenty of room to add things of our
own devising to the radio to turn it into whatever we want it to be.

Keep your power low, remember a 100 watt signal that is S-9 is S-7 at 6 watts! You might consider an external filter depending on the rig you use. I never had any complaints so I can't help you there, but I would certainly address them if they came.

Perhaps a better book is in order. :-)

Since you're sporting a 4-land call, you may be in SERA country.
(SERA is the Southeast Repeater Association.) If so, get a copy
of the SERA Journal. It shows which tone is required by which
machines. Not all repeaters require tone access, but many do.
It is a way of combating interference and not generally intended
as a way to lock you out of a machine (at least not in SERA country,
things are different out on the left coast where "private" or closed
repeaters are more the rule).

>But it takes 2 to tango.... and I thought it was a fair assumption to
>consider all this an impressive accomplishment.

They shouldn't consider you an idiot (unless they want to consider
that they were idiots when they were starting out too). Having a sense
of wonder about radio is a *good* thing. Learning how and why it all
works is a *better* thing, but that takes some time. There is,

unfortunately, an Old Boy network in amateur radio which isn't
always welcoming to new amateurs. You met some of them.
Develop a thicker skin, most hams aren't really mean spirited,
though some seem that way at first.

That said, they were right that it is primarily the repeater, and not
your HT, which is doing most of the work. It runs more power than
you do, so it isn't hard for your radio to hear it at a distance, and it
has a better antenna, and antenna location, than you do, so it hears
distant or weak signals better than you can. That's what it was
designed to do, of course, and is why it was expensive to build
and install, and why it is worth that difficulty and expense.

>I am kind of reluctant to air my call sign again because I've been
>dubbed the local idiot for being amazed at the repeater system and my
>little handheld radio.... Maybe after everyone forgets about this, I'll
>do it again and just sound like nothing should impress me .. yes?

Naah, get back on, bug the old timers. It can be fun to be the new
guy if you approach it in the right spirit. It sounds like you have the
right spirit. Maybe you'll remind some of the old timers of what it
was like when *they* were new. They weren't born radio gods
either.

Lou-

Who says Icom has fixed the battery?

I have been in touch with AES/Orlando, as well as an Icom factory rep, for over three months now, waiting for "fixed" batteries. Within the last few weeks, a new supply of batteries arrived at AES, bearing the same date codes as ones I've had break.

In the mean time, the radio just failed for the second time. Indications are that it is working, but there is almost no power out and receive sensitivity is down. I seem to be stuck with a real lemon!

>
>Cheers,
>--Weiyun

Well, I have both. While the VX-5R has more power, and that can be
useful at times, the VX-1R is still smaller and lighter while doing most
of the same things. Where I live, *neither* HT will directly hit many
repeaters, but either one is very useful when used with a 50 watt mobile
rig on a good antenna set up to crossband repeat. The smaller VX-1R is
more convenient to carry, and works as well for this service as its more
powerful big brother.

In my opinion, the jump from 500 mW to 5 watts often isn't very significant.
It is the jump to 50 watts and a good antenna which is significant. No HT
has that directly, but most any HT can access a mobile crossband setup
which does.

>Also how they preform mobile for a wondering mind?
>
>Thanks in advance and 73's de John / KB2NQT in Brooklyn, NY....

I have both. Neither is a terrific HF rig, but either will suffice for casual
use. I wouldn't want to depend on either of them as my primary HF rig
under marginal conditions. The FT847 is a better VHF/UHF rig. The IC706
can be fitted more easily into a tight mobile installation. The FT847 control
system is a bit more traditional, ie lots of knobs and buttons. You may love
or hate the IC706 soft key menu system (I think it is brilliant for mobile
operation, IMHO the FT847 control panel is too busy to use while driving).
Etc.

These Jack of all trades radios don't do anything particularly well, but
they do a lot in what is often an adequate manner. If you can't afford,
or don't have space for, higher quality separate rigs, either one of these
radios can fill the bill. I'd say that the FT847 is a better rig for the house,
and for VHF/UHF operating. The IC706 is better for mobile. I say that
because the IC706 with the head separation kit can be tucked easily
into virtually any car, and because its control layout is easier to use
while driving than the too busy FT847. But where you can actually look
at the panel, ie at home, having all the knobs and buttons can be convenient.

This is my own one-owner/nonsmoker TS-950SDX dual-receive DSP
transceiver, SN # 6080059,
purchased new from Kenwood 1995. It has been one of three HF
transceivers in my shack since
then and has less than 200 hours on it, all chasing rare DX (I am not a
contester, rag chewer, or
data-mode operator). It is in as-new condition cosmetically and
electronically; there is not a mark on
it and it is aligned and works perfectly in all respects It is also
fully loaded with every accessory you
can pack into it: YK-88SN-1, YK-88C-1, YG-455CN-1 filters, RM-1 remote
control pad,
DRU-2 digital recording unit, and VS-2 speech synthesizer. It comes with
all manuals, including the
massive service manual, and original packing. A similarly equipped unit
would cost more then
$4,500 if purchased at best dealer price today. I will sell mine for
$2,895 firm, + shipping, a savings
of 35%. Tks es vy 73, Jan N0JR.

I have an as new Icom dual band ht with several options. This ht is in perfect condition and is a 10 out of a 10 functionally and cosmetically. This ht has a detachable front panel which will let you use it as a digital speaker microphone showing all functions. The Z1A has an alphanumeric memory display, alphanumeric message and paging, backlit keypad, independent tuning knobs plus many other features. This ht has extended receive from the factory. I am selling this ht with two Icom BP-180 ni-cad battery packs which are in excellent condition, two new Maha MH-BP-180 Ni-MH battery backs (bought in Dayton), BP-170 AA battery pack case, BC-79 rapid charger, CP-12 cigarette lighter cable with noise filter, HM-46 speaker microphone, New Radio Shack vox headset (bought in Dayton), soft case for ht and a Comet tri-band high performance rubber duck antenna. I am the original owner and have the boxes, owners manual, sales brochure and all of the standard accessories that came with the unit.
$300.00 plus shipping. E-mail me at: n8ihs@flash.net

Hi Murry! Using a good quality low pass filter is certainly a a must - I use a NYE, but I think a Bencher might even be better. An antenna tuner will also attenuate harmonics. So using one even on an resonant antenna can help. Mono band antennas are better at reducing harmonic radation then multiband antennas. A lot of the time though the problem is not harmonic frequencies getting into neighbors equipment, but just plain signal overload if you are close to the neighbors. A real strong ham frequency signal into a tv can totally overload the front end of the tv. Cheap phones can be a real pain. Certain Radio Shack phones are very resistant to RFI (model 43-586 I use). A cheap stereo system with a bunch of cables going everywhere at a neighbors house can be a big problem. Getting your antennas as high and far away as possible from the neighbors is always helpful if possible. I believe most modern high quality rigs and amplifiers are very clean an am not certain if there would be any noticeable difference in rfi problems. I have had luck using the high quality rfi filters from Industrail Communications Engineers in Indiana for phone and TV here is a great link to get more info and addresses http://www.arrl.org/tis/info/rfigen.html . Good Luck --- Steve KK9ZZ

Hello,

I have a Yaesu FT-50RD for Sale or Trade.
It is in great condition!!! This is the one with
FTT-12 Keypad, which allows for CTCSS &
DCS Encode/Decode, also a Built-in DVR
(Digital Voice Recorder).

It is 2m/440 MHz, but also has the following coverage:

The HT's TX Range:

121-222 MHz
222-232 MHz
311-399 MHz
400-504 MHz

The HT's RX Range:

50-221.995 MHz
222-299.995 MHz
300-399.95 MHz
400-539.995 MHz
590-999.995 MHz

No gaps on the above!!!
The RX/TX coverage is only guaranteed in US Amateur
bands.

For more info on this HT, please check out these links:

http://www.yaesu.com/ft50.html
http://kq6mu.8m.com/ft-50r.html

This HT has the original box, manual and packaging.
Also comes with the 5 Watt 9.6V 600 mAH battery (In excellent shape!)
FNB-41, the FBA-15 battery pack and box, original rubber duck,
charger, & Premier Ear/Mic.
Hate to get rid of it, but need the money.
I am asking $250 for all, CONUS only please.
If you are interested in it, please E-mail me or Call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

930. FT-100 -- Great Rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-14 00:00:00 UTC
From: Paul Morawski <morawski@azrael.mitre.org>
Message-ID: <mevn1wyzv8r.fsf@azrael.mitre.org>
Source record: 103769

I read the FT-100 versus IC-706 debate with great interest.

I recently purchased (with reluctance) an FT-100 to replace a Ten Tec Delta II at our summer house on NA-083. I've used it for about 10 hours of heavy CW operating so far and I'm very happy with it.

The full-QSK is useless, but I expected that, and there is a lot of button-pushing. That goes with the turf. However, the combination of 500/300 Hz filters plus the audio DSP filtering is really good for the style of operating I do where there are many stations calling me.

The issue of reliability remains to be seen. One story I heard was that it was the early batches that had reliability problems. Don't know how to confirm that rumor.

In the mean time, I'll keep pounding on the thing and I'll keep a Ten Tec Scout in the closet. The upcoming IOTA contest will be the acid test.

Regards,

Paul Morawski, AA3DD

I am seriously considering getting started in ham. I would like to start, of course, with two meter, pending proper licensing. My concern is this: I like the power of a mobile, but as I own a jeep, am fearful of theft and weather damage..(always get caught in rain with top off).

I also like the portability of a handheld...but it lacks the power. Of course, once started i will probably follow the trend of continuous upgrades and purchases....

Any recommendations from those more experienced (ie everyone)

==========
My TS950SDX doesn't have that feature either, but they tell you how to
do it--it's simple, but a pain in the butt to do. Close your key, and
listen to the sidetone--most of todays transceivers have an 800 Hz
sidetone, and an 800 Hz CW offset. Vary your tuning dial until the
received signal is the same frequency as the sidetone. That should
zero beat your frequency to the one you are receiving. Only problem
with this procedure is---by the time you do all of this.....the other
station is gone or in qso with someone else. Easier way--just tune in
the signal to the center of your passband---THAT'S CLOSE ENOUGH !!!

Dale, most of those old am rigs with an 8Mhz vfo or xtal used a doubler
followed by a tripler state, for a total multiplication of the xtal freq of
6X exactly. So....take the desired freq, divide by 6 and there's your xtal
freq. 50.4 divided by 6 = 8.400000 Mhz
Hope you enjoy long ragchews on 6 am.

I think the FT-100 and the 706 are more alike than the 706 and the 847.

I have been using the 847 for about a year. I did do a side by side comparison with a 706. The 847 was aomewhat better vhf and uhf. On HF I felt the 847 had a sligh edge also.

The 847 is much larger than the 706. If your working from home I think the 847 is a better choice.

For mobil you may want to compare the FT-100 with the 706.

As has been pointed out these radios dont excell in any one area but they sure as hell give a lot of capability for the money.

Ad up all the radios you would have to buy to get all mode on 2m, 440, 6m and HF and you will need quite a bank roll.

Gary - KJ6Q wrote in message ...
Gary Coffman <ke4zv@bellsouth.net> wrote

<SNIP>

> Gary Coffman KE4ZV

I'm also interested in the 847 - or SOME rig covering HF-VHF - since you seem rather unimpressed with the 847, perhaps you have a suggestion for something better? I would consider dropping the HF portion, and focus on VHF/UHF coverage if there was a substantial benefit in performance to justify dropping HF from the mix - I know Icom has a couple of contenders - do you have a comment?

You might read my other post on the subject to get a better perspective on my questions...

Thanks.

There are some applications where the slow drift of the MFJ259 is a
problem.
I was thinking about stabilizing the oscillator either by using a huff
and puff approach
or by injection locking.

Does anyone have a circuit diagram of the MFJ259 so that I can assess
how difficult
this would be, and what (if any) existing resources might be used.

Regards

Stewart G3YSX

954. Yaesu VX-1R... what can you use it for with 500mW power

You are correct to "think out" your HT requirements before purchasing a VX-1R, Weiyun!

I do not recommend the VX-1R as anyone's "first and only" HT.

But I use mine a lot! I live in repeater-rich Southern California, and regularly hit several repeaters with my VX-1R.

I just used it for a couple events locally, too: both community events, where a half-watt was all that was necessary for reliable communications.

So...it all depends upon what YOU can do with 1/2-watt! For me, I hit over twenty Amateur radio repeaters, monitor weather and public service agencies' transmissions, go to a local AM broadcast band station once in a while (same for FM, too), and more. The VX-1R uses the SAME programming software - ADMS - as my FT-50. And it uses the same speaker-mike accessories as my VFX-10 FRS radio, FT-50, and commercial VX-10. I know the 1/2-watt "limitation" - and know what it can do for me.

> ...I know the Tech. won't let you do all that much...

Funny...I don't feel "slighted" by merely being a "Tech."

I participate in 2-meter Salvation Army/SATERN drills. I participate on a 2-meter system that handles over 5,000 highway emergency calls annually. My local American Red Cross chapter does work on the Amateur bands I can access. I am a member of several local Amateur Radio clubs - some of which have autopatch access. I am a member of my local RACES group - operating mainly on the bands I am licensed for...and on and on.

I am not "limited" in being involved in this magnificent hobby with a "mere Technician" license. There's plenty to do in most regions with a Technician license. It all depends upon how much homework you are willing to perform.

If one finds things "boring" - maybe we should suggest that he/she contact the ARRL and join their local Amateur radio clubs. Surely there are other club members who have similar interests!

Not all repeaters require a tone, some, like our local club machine
use a 100Hz tone as an option for those who are on the fringe of the
repeater, it helps to hold it open for them a bit better.

73,
Tom

963. WTB: QRP Club kit(s)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-14 00:00:00 UTC
From: BamBam <kl0an@my-deja.com>
Message-ID: <7mgvbm$68r$1@nnrp1.deja.com>
Source record: 103842

Hello everyone,

I'm looking for a QRP transciever kit to build. I'd like to find a KnightSmite or Tixie in complete kit form. I know the KnightSmite isn't offered anymore but, if someone has one still in kit form, I'd be very interested in taking it off your hands. Or if you know of another kit in the same price range as these two kits, I'd love to hear about it. I already know about the Pixie II and that is my fall back kit for right now.. If I don't find another one, I'll buy that.

Also, looking for a kit that a club could put together and have an evening meeting for assembly. Then possibly put kits together and market them to the QRP community in kit form.

Does ANYONE have any ideas on any of this? Looking for kits and ideas..

Drop me an e-mail if you know of any good kits.

964. YAESU FT51R AND INTERMOD ???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-14 00:00:00 UTC
From: w2irl@aol.com
Message-ID: <19990713225749.05084.00007564@ng-ck1.aol.com>
Source record: 103843

I am interested in buying a FT51R but before I do I would like to know the reviews of anyone who owns one first,and since it is one of the most expensive dualband radios that Yaesu has.

My main concern is intermod since I normally work in places where there is alot of it.
Any other information would be very welcome.
Thankyou In advance
Pat (w2irl)

The class of license you have DOES NOT provide you with the ability to
experience the thrill of talking with someone on the other side of the
globe. Upgrading will give you the ability to do that. It's not that
hard--I went from novice in 1980 to general in 81, to advanced in 82,
and finally to extra in 1985. If I did it, you and anyone else can
too. Everyone says "I can't learn the code". That's BALONEY. I said
that also. When I took the extra test, I passed the code, & failed the
theory--the exact opposite of what I expected. I went back a month
later and passed the theory with only 1 wrong. TRY IT, YOU'LL LIKE
IT !!!

There are some applications where the slow drift of the MFJ259 is a
problem.
I was thinking about stabilizing the oscillator either by using a huff
and puff approach
or by injection locking.

Does anyone have a circuit diagram of the MFJ259 so that I can assess
how difficult
this would be, and what (if any) existing resources might be used.

Regards

Stewart G3YSX

> Neal KK7PA
> Portland, Oregon
>
The left side of the display is the UHF "default" and the right
side is the VHF "default". Each side has a VFO that covers UHF and VHF
frequencies. I believe the default configuration provides the optimum
sensitivity. If the keyboard mod is done to open up the Rx for
800-985Mhz range, these are accessible only thru the left (UHF default)
side of the display.

I believe the W32A is the best dualbander on the market today for
the money. No other radio equals its sensitivity across the entire
range of frequencies.

Check your manual. With any modern tranceiver that I am familiar with,
if you center the received signal in your narrowest CW filter, your
transmitted signal will be pretty darn close to zero beat.

This may help you. I have a Ford Explorer and mounted a Diamond luggage mount motorized antenna on the luggage rack. I drilled two holes directly into the rack. I needed the motorized version due to the fact that I park in a garage and no antenna would fit.

997. Need PIN Diode help...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-14 00:00:00 UTC
From: KI8IK <KI8IK@yahoo.com>
Message-ID: <7mi96bhbi1@ink.msen.com>
Source record: 103876
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I need to replace the diodes in my TS-930's RX filters and
have been told to use MI201 PIN diodes, but I'm unable to
find a source for this particular part. I've also heard of
MPN3700 and HP5082-3080 being used.

My questions are:
Is there a "best" (readily available) diode for this situation?
What makes one PIN diode better than another for this use?
What are "good" specs for this application?

I know that PIN diodes are more sensitive to static discharge,
but I don't have the rig connected to the antenna/ground/power
when not in use so I don't think this will be a problem.

>
>Any suggestions would be appreciated.

If you're using a balanced antenna, ie dipole or other symmetrical
form, then you don't need a RF ground connection *at all*. It would
serve no useful purpose. This simplifies matters since all you need
is a safety ground. The third wire in the AC wiring supplies your
safety ground. This is generally the preferred setup for an elevated
station location with no lightning protection issues. (I assume there
are none here since you're talking about using the radio on a deck,
which I'm assuming is a temporary hookup with the radio being
brought inside during bad weather.)

If you're feeding an unbalanced antenna, then you do need a
counterpoise, but you need it *right at the antenna feedpoint*,
not at the rig. If the feedpoint of the unbalanced antenna is at
ground level, the counterpoise could be provided by an Earth
connection. But if the antenna feedpoint is above ground level,
then you'll need to supply a different sort of counterpoise, normally
a set of tuned radials, at the antenna feedpoint.

The only time you'd need a RF ground at the rig is if the rig is mounted
directly at the antenna feedpoint, ie you're end feeding a random
wire. This should be avoided if possible since it is often problematic.

> effective it is.

It's just a random wire tuner, any other random wire tuner
would work as well, or as poorly. Its purpose is to resonate
a counterpoise wire. It doesn't matter if the other end of the
wire is actually connected to Earth or not (other than doing
so changes the tuning settings).

>2. Use an antenna system that uses balanced feeder, not coax.
> (The only coax required being that from the tx to the ATU)

Coax is balanced. It has exactly differential currents on its two
conductors, just the same as ladder line. But you do need to
choke off any stray currents on the *outside* of the shield or
you'll de facto have a 3 wire system which isn't balanced. A
choke balun does that for you.

Ladder line doesn't need that because there are no issues of
"outside" and "inside" to its construction. The line, either sort,
has to be connected to a balanced load, of course, or its currents
won't be balanced. So the antenna should be symmetric, ie a
center fed doublet (naturally resonant or not).

>Any of you (other) old timers out there remember that article?

Yeah, I remember it. It's an old wive's tale. The theory is that
the coax will act as two different lengths because the currents
flowing on the inner will be retarded by the velocity factor of the
coax. So if the physical length of the coax is an unfortunate
multiple of a quarterwave at the operating frequency, the effective
inner length won't be. Unfortunately for that idea, it doesn't work.
The currents are common mode, not differential, and will for all
practical purposes flow only on the outside of the coax shield.
The capacitor connections to the inner do nothing except add
a bit of extra reactance in that path.

1004. Re: RFI!! Is there such a thing as CLEANEST AMP

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-15 00:00:00 UTC
From: RSherry@metricom.com
Message-ID: <378e0216.262673714@news.metricom.com>
Source record: 103683

Hi Murray,
Overload is the most probable cause. Any equipment that has wires comming out can be a problem. I have used common mode RF chokes with very good results. I use 2.5 to 3.0 inch long ferrite rods about 0.375 inch or so in diameter (material is not critical) and wind a single layer winding on the rod. Do not scramble wind the coil. I use fillament packing tape to hold the winding in place because it is very strong. I use these on the power cord, speaker line to each speaker, antenna coax input and on any other cable that is attached to the equipment. Wind the whole cable and not the individual wires one at a time on the core. Place the choke as close to the equipment as possible.

Many times for telephones, a 330 uH inductor in series with each wire in the telephone line along with an 820 to 1000 pF 500 to 1000 volt disc ceramic capacitor across the line at the input and output of the inductors is also needed. This forms a balanced Pi filter. Use very short leads to construct the filter. The capacitor leads should not be longer than 0.25 inches. This filter should be either inside the telephone or very close to the telephone line to telephone instrument connection. For externally powered telephones use the common mode choke described above on the power line and any other line including the telephone line as needed. It can be necessary to use the Pi filter with the common mode chokes for the very RFI sensitive telephones.

Sometimes rusted metal to metal contact (such as fence wires) form diodes that generate harmonics when the RF field from a close transmitter and antenna creates RF voltage at this very poor junction (metal to rusted metal contact point). This is cured by correctly connecting the metal parts eliminating the poor connection.

By the way - the common mode chokes work at reducing computer RFI from getting radiated and blocking ham reception. I have also used this on an Ademco home alarm at the next house to allow me to work 40 meters again. It was S9+10 dB before and with three common mode chokes put the RFI into the band noise.

At my present location I presently use a horizontal 40 meter full wave loop antenna 20 feet above ground about 15 feet from the house. I have no interferance to any equipment in the house. No items are treated with the common mode chokes. RFI free items include four televisions, two stereos, four telephones of which two are wireless and one of which is 17 feet from the loop antenna, two computers, modems and printers. I operate 80 through 10 meters with about 600 watts and a 30L1. I have also used some 1200 watts with an MLA2500B with the same

result. I have also used 2 - 4CX350s in a home brew amplifier all with no RFI. The exciter is a 1000D. I use a KW Matchbox and no external filters such as a low pass filter. The televisions are on cable .

Good luck,
Russ

Source record: 103684

I'm a newbie in this area, so be gentle...

I'm in the market for a new HT, probably a 2-band or 3-band. At the same time, I'm looking for a handheld VHF marine radio (for use in sea kayaking). I know these are different applications with different needs, but I can't help wondering -- why buy two radios? The marine range of 156-157 isn't very far away from the 2m bands -- is there an HT that will handle both, or that can be (legally) modified to handle both? Or is there some legal or technical reason why this can't be done? Any info will be helpful.

>globe.

Why not? I've had conversations with Japanese and German amateurs
at the same time, via Oscar 10, that only requires a Tech license. There
are numerous other ways to work Dx on VHF/UHF. There's EME, aurora,
tropo ducts, Sporadic E, etc. There is even conventional F layer skip on
6m at times. All of that is available to the Tech.

Dx can also take on a different meaning at microwave, where working the
next state can be a huge thrill. It is still possible for an amateur with rather
modest equipment to set world distance records on many bands available
to those holding a Tech license. That possibility disappeared on HF many
decades ago.

Of course many hams aren't interested in Dx. There are many other things
one can do on bands available to Techs, ATV, high speed data, telemetry,
telecommand, radar, etc which aren't available to those operating down on
the DC bands. There are also almost endless possibilities to help your
community (SKYWARN, ARES, etc) or just to ragchew with your buddies
using radios you can hold in one hand.

Amateur radio doesn't have to revolve around "shooting skip", even for those
holding Advanced or Extra class licenses. To me, the really interesting stuff
involves doing things with radio that haven't been done to death a million times
before by others. Much of that only requires access to spectrum that Techs
have available to them (though there are certainly novel challenges available
at HF too, brought on by the gross channel impairments of that rather hostile
part of our spectrum).

1007. Re: QST: FT-100 vs. IC-706MkIIG

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-15 00:00:00 UTC
From: M Johnson <silversq@ix.netcom.com>
Message-ID: <378E1597.BD1BF23F@ix.netcom.com>
Source record: 103686

Tim seems to have a bug up his rear for the FT-100. He was bad mouthing it on the FT-100 mailing list before it even came out. He does not own one and completely distorts the facts from what others are saying on the list.

RBiesel wrote:

> There seems to be far less pros than cons for the FT-100, or is it just that there
> are fewer 706MK2G users which post their views here?

The 706 has been around for several years. Most of the bugs have been worked out. It seems like a fine rig for mobile operation.

>
>
> What issues exists with the ICOM ? I hear nothing bad about it. Surely some exist.

One of the reasons I did not go with the ICOM was the noise blanker feature. Just about every report I had read said it did not work well. I was looking for a rig to use as a mobile and a good noise blanker is a must.

The FT-100 has a great noise blanker that even got rid of the fuel pump noise on my Ford Explorer.

I spent a lot of time comparing the two radios even before they were released.
The main reasons I went with the FT-100 were:
Noise blanker operation
Menu and operation features seemed easier to use while mobile.
Interface with the ATAS-100 antenna for automatic tuning.
Better on the air audio from FT-100 users.

> What antennas are being used successfully with each rig?

I use the ATAS-100. When I first installed it, I used a Diamond hatchback mount on the rear hatch of my Explorer. The performance was ok but not great. I also did not like the idea of the antenna flipping up every time I opened the hatchback I also could not get a real good match on 40 meters.

So I remounted the the antenna using the same Diamond mount but connecting it permanently to the main body side of the hatchback rather than to the hatchback itself. This let me get the antenna about two feet higher and also gave a very good solid ground point for it to work off of. The improvement was very noticeable. I was able to tune to a good swr on 40 meters where I could not have before.

Last week I took an 800 mile road trip and spent several days in some high mountains on nothing but old jeep trails. The rig worked just fine for the whole trip and I made some great contacts. It was fun working 17 meter dx while sitting on top of a 12 thousand foot mountain top.

> Could the failure rates be skewed because of less than optimum mobile installations
> or sub par connections?

I think so. Grounding is very important in HF installations. The radio must have a good short ground to the frame or body of the car or truck. Too often the user depends on the power lead to provide a rf ground. Very bad idea.

My radio is remote mounted with the main rig in a side panel compartment in the back of my Explorer. I have a one foot ground strap that goes from the radio directly to the body of the Explorer. I also have ground straps going from the bumpers to the frame and the hatchback and hood to the frame. I use powdered iron chokes on the power leads and all control, mike, and speaker leads to help keep out the rf and noise. (The remote kit does supply one such choke on the control cable but I put in additional ones).

I think the bottom line is to first decide what you want from your radio. Then try to find one that suits your needs. I wanted a compact hf mobile that could be remote mounted. The addition of vhf and uhf were not high priorities as I did not plan to take out my dual band fm rig. But it was nice to get all mode vhf and uhf capability.

If I were looking for a base or home station I would not choose either the 706 or the FT-100. Because of their size they have to compromise on some of the features. While their size makes them great for mobile I would find such a small faceplate to be a drawback for the home station. The main reason is that there are far fewer controls so you have to keep switching control functions with the menus rather then just being able to have a dedicated button or knob for each feature.

I just disassembled a Ham IV rotator that I installed new five years ago. My customer was not able to turn the rotator. Adding a new start cap did not do the job. I removed the rotator and control box to my shop and on disassembly, found the bottom bearing set dry and rusted. The top set was fine. I have found this condition on rotators that have been up 10 years or more, but never on one this new. They must have changed their grease.

Well, my primary VHF/UHF radios are the Icom IC275H and IC475H,
hooked to some nice high mounted KLM beams, though for *really* serious
use I have a stack of SSB Electronics transverters driving amps which can
be used with my good HF rig serving as the IF. But I *do* use the FT847 a lot.
It is very convenient, even though it isn't a stellar performer. I have it here in
the computer room rather than in the ham shack. It tends to account for much
of my casual operating at home while the IC706 handles my casual mobile
operating. Only when I get the urge to do some serious operating do I fire
up the lineup of equipment in the ham shack.

The maximum safe working voltage for the IC2AT is 9.6 volts. The battery
packs for a HTX202 will fit the IC2AT (they were copied from it), but you
must observe the safe working voltage limit of the IC2AT, ie a 12 VDC
pack can *not* be used. You can *not* use the IC2AT directly on 13.8 VDC
(though you *can* do that with the HTX202). You need the Icom DC-1 (or a
similar regulator) to drop the voltage to the safe level for the IC2AT if you
want to operate from a 13.8 VDC source.

Hello all,

I have a Yaesu FT-50RD for Sale or Trade.
It is in great condition!!! This is the one with
FTT-12 Keypad, which allows for CTCSS &
DCS Encode/Decode, also a Built-in DVR
(Digital Voice Recorder).

It is 2m/440 MHz, but also has the following coverage:

The HT's TX Range:

121-222 MHz
222-232 MHz
311-399 MHz
400-504 MHz

The HT's RX Range:

50-221.995 MHz
222-299.995 MHz
300-399.95 MHz
400-539.995 MHz
590-999.995 MHz

No gaps on the above!!!
The RX/TX coverage is only guaranteed in US Amateur
bands.

For more info on this HT, please check out these links:

http://www.yaesu.com/ft50.html
http://kq6mu.8m.com/ft-50r.html

This HT has the original box, manual and packaging.
Also comes with the 5 Watt 9.6V 600 mAH battery (In excellent shape!)
FNB-41, the FBA-15 battery pack and box, original rubber duck,
charger, & Premier Ear/Mic.
Hate to get rid of it, but need the money.
If you are interested in it, please E-mail me or Call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

Mike Green KQ6MU

>Mike

Assuming your HF rig is clean, RFI is going to be due to fundamental
overload of consumer electronic equipment. There are a number of
types of susceptible consumer equipment, and they can exhibit a
number of different symptoms.

VCRs are particularly susceptible to lower HF signals since they use
those frequencies internally to record and playback. VCRs FM modulate
a carrier between 4 and 8 MHz to record the signal on tape, and recover
that same broad FM signal during playback using very sensitive heads
and preamps (and circuits with virtually no selectivity). These often aren't
well shielded and will pick up your 80m and 40m signals if the field strength
at the VCR is high. There isn't a lot you can do about this, other than keeping
the field strength low, since you'd need to totally shield the VCR to avoid this
sort of on-frequency pick up in a strong field.

Telephones and stereos are also susceptible to high RF field strengths.
They will rectify and amplify signals that they pick up on their wiring.
You can do some things to filter the signal off their wiring, since it isn't
at a frequency that they normally use. Chokes and bypass capacitors
can be used on stereo speaker leads, on telephone wiring, etc, to suppress
this sort of RFI. But if the neighbors don't want you modifying their
equipment, again you need to reduce the field strength at these devices
to reduce the level of interference you will cause. Note that nothing you
can do to *your* transmitter (other than reduce power) will affect problems
caused by fundamental overload. So don't waste your time monkeying
with grounds or filters on your equipment. It won't help.

Now legally, it is the responsibility of the owners of consumer equipment
which is not designed to be a shortwave receiver to solve cases of
fundamental overload. But most consumers don't want to believe this,
and in pursuit of good neighbor relations you don't want to throw it in their
faces. So you want to take steps to prevent the problem in the first place.

The only way to do that is to reduce the field strength experienced by the
susceptible equipment. There are two ways to do that. The best way is to
locate the antenna as far away from the susceptable equipment as possible.
This brings our friend the inverse square law into play and reduces the field

strength proportional to the square of the separation we can achieve. The second way is to reduce transmitter power. This will, of course, reduce the field strength seen by susceptible equipment. It also reduces the field strength seen by distant stations, however, so we want to avoid having to do this if possible. So get your antenna high, and well away from dwelling areas. The more distance you can put between it and consumer equipment, the less RFI complaints you will get.

>Thanks for the message. It's very useful in my quest into amateur
>radios. Since I am new, can someone also enlighten me what's a "mobile
>crossband setup"? I have seen two posters talking about it. Used in
>conjunction with a weaker handheld.

Many mobile dual band rigs can do crossband repeating. What this means is that the radio will retransmit the signals it receives on a frequency in one band onto a frequency in the other band. In other words, it acts much like a normal repeater, but the split between transmit and receive frequencies is *much* larger, ie in two separate amateur bands. This means you don't need an expensive set of repeater cavities to keep the rig's transmit signal from desensing the rig's receiver. (It wouldn't work if you did that.)

The way you use it is to tune one band to the frequency of a repeater you want to use, or to a simplex frequency you want to use, and tune the other band to a simplex frequency you'll use as a link to your HT. Then follow your radio's procedure to put it in crossband repeat mode. When you transmit from the HT on this frequency, the mobile rig will retransmit your signal at high power on the other frequency, extending your range.

Now if the rig does full crossband repeating, it will work the other way too, retransmitting any signal on the frequency in the other band to the frequency to which your HT is tuned. This is often helpful if the other signal is too weak for you to hear directly. But it can be a problem too, because if the other frequency is tuned to a repeater with a long squelch tail, the crossband repeater won't *turn around*. In other words, you can't make it repeat your signals until the signal on the other frequency drops out and it stops repeating *that* signal. Since lots of repeaters use long squelch tails, this is a real problem.

A way around this is to set the mobile rig to do *one way* crossband repeating. It will repeat your signal, but it won't repeat the signals on the other band. You'll have to listen to them directly by using your HT in dual band mode. This works well since the problem is usually not that you can't hear the repeater you want to reach with the HT, but that you just can't get back to it with the low power transmit of the HT. So one way crossband repeating effectively boosts your transmit signal while leaving receiving to be done conventionally by the HT. It is like adding a 50 watt amplifier to your HT. This is the way I normally operate.

Now there are some legalities involved which can differ somewhat depending on exactly how you're operating, and there are some common courtesies that you want to practice to avoid causing

problems for other amateurs when you operate this way.

In some cases, you are operating a repeater as defined in Part 97 and must obey all repeater rules. In other cases your operation falls under the section of Part 97 covering operating a radio station by remote control, and there are a different set of rules you have to follow. In all cases, you want to choose your link frequency with care to avoid causing interference to others, and you want to protect the link with tone access, or DCS, etc to avoid having the mobile unintentionally retransmit some other amateur's signals.

Never ever program an active repeater frequency into *both* sides of your crossband repeater and place it in full crossband repeat mode. That will lock up both machines in ping-pong fashion and make you very unpopular with the owners and users of the two repeaters. There are ways to link two repeaters together properly, but this isn't the way to do it.

>both? Or is there some legal or technical reason why this can't be
>done? Any info will be helpful.

To the best of my knowledge, this *could* be done but hasn't. The
amateur 2m and marine bands are close in frequency, and both use FM
modulation with the same deviation. There are additional rules about
radios that are able to transmit in the marine band (type acceptance)
that don't apply to amateur transmitters, but I don't see any technical
reason someone couldn't build a transceiver for both bands and get it
type accepted for marine use.

However, I've never heard of one. It is common for owners of amateur
2m transceivers to modify them to be able to transmit in the marine band,
but it isn't legal.

Unfortunately, aviation transceivers are still awfully expensive compared to
single-band amateur 2m VHF transceivers. Anything related to aviation seems
to have a price premium attached to it.

But, no way around it - an FM transceiver won't work as an AM transmitter.

I've been using a 207H for several months now and am happy with it. I thought it wasn't very sensitive until I realized that the squelch control also activates an r.f. attenuator when turned way up. It doesn't have cross-band or dual-receive capability. The control head is smaller than either the 2710 or 8100, but the one for the new FT-90 looks like it might be even smaller.

Ok, with all of that said mark, How does it perform in a contest, like Field Day, where everyone is adjacent to your frequency.

I am looking for a compact HF/V/UHF that will allow FM and maybe even KA satellite. It must have a good front end, filtering and be well built.

The FT-100 sounds like it might perform well, but I am concerned about durability. Especially since it has pigtail antenna connections and a history of DOA's right out of the box.

I also have heard the ATAS is a poor performer, which is why I am considering either a High Sierra Screwdriver, or a Bug catcher.

Also, the FC-20 Auto-tuner (from what I have read) does not change bands well if your antenna is not resonant at your new frequency (like a screwdriver).

I am planning on installing it in my Ford Expedition, and although space is not a real problem, I want ot to be convenient as well. If I mount it in the truck, I don't want to have to remove it when I run into the office. The FT-847 would be a great choice, but it would be difficult to hide and secure from thieves.

You'll have to buy a real air band HT. No amateur HT can transmit
AM (though many can *receive* it), but that's what you have to do
in the air bands. Even if you could modify an amateur HT to transmit
AM (and there's no practical way to do that), it would be illegal anyway
since it isn't Type Accepted for that use. Air band HTs aren't that
expensive, buy the right thing and stay safe and legal.

>done? Any info will be helpful.

It is technically possible, but it isn't legal. Marine band equipment
must be Type Accepted for marine use, no amateur radio is. (You
could accidentally tune an amateur radio to a frequency between
marine channels, and that disqualifies it from being eligible to be
Type Accepted for marine band use because of the potential for
interfering with safety of life transmissons.)

Bill, both are really good HT's If you want 800-900 meg receive capabilities get the W32A if not then get the 51R, if you don't mind spending the extra $ 100.00.
I would recommend the W 32A, or the 78A Kenwood if you can find a good one of the first models that received 800 meg.

1027. ICOM IC-T8A Battery Question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-15 00:00:00 UTC
From: henry@wolfenet.com
Message-ID: <378e44d0.1848002@news1.wolfenet.com>
Source record: 103706

A friend of my and I both own Icom IC-T8A's. My friend takes his battery out of the transceiver to charge. So far, the clip on every battery that he owns has broken and had to be sent back to the factory after only a couple of charges. The charger does not touch the clip in any way, but the act of taking the battery out and putting it back in seems to break it. Does anyone else have this problem, if so, is it a general problem and is there a fix. Thanks in advance

Henry, I recently read an article on the T8A's Battery here on the
rec.radio.swap pages. It said that the battery clip was designed wrong
and after a few uses it will break, but they have been replacing them. I
don't know how long they will continue to replace the battery packs but
I think if I had one I would always leave it on the radio to charge.
It is a bad design and the material is sorry.

N5ISV wrote:

> Ok, with all of that said mark, How does it perform in a contest, like Field Day, where
> everyone is adjacent to your frequency.

Hi Randy,

I think I would opt for one of the optional filters with either the FT-100 or the 706. They do
an adequate job of rejecting adjacent signals but not really great. I have not had a chance to
try mine in a contest yet but would imagine that it would not be as good as my home station.

> I also have heard the ATAS is a poor performer, which is why I am considering either a High
> Sierra Screwdriver, or a Bug catcher.

I really don't think the ATAS can match the performance of a good full size Screwdriver or a
Bug catcher. It really is a scaled down version of a basic screwdriver. The coil uses much smaller gauge wire than you normally see on a screwdriver and the stinger is shorter and a smaller gauge.

I really haven't had a chance to do a side by side comparison with one of the other antennas.
But I don't have a lot of problems making contacts with it.

The real handy thing about it is that you just push one button to tune. That works great when
you are mobile and want to change bands.

>
>
> Also, the FC-20 Auto-tuner (from what I have read) does not change bands well if your
> antenna is not resonant at your new frequency (like a screwdriver).

If you were using a screwdriver you would not need an auto tuner. I really have not heard any
reports from anyone using the FC-20.

> I am planning on installing it in my Ford Expedition, and although space is not a real
> problem, I want ot to be convenient as well. If I mount it in the truck, I don't want to

> would be difficult to hide and secure from thieves.

That was one of my concerns. The faceplate pops off the dash in about 2 seconds and it only takes about 10 seconds to unscrew the antenna.

Hello All,

I have a Kenwood TR-9000 2m All-Mode rig for Sale or Trade. It is in
100% working condition. The radio does have some minor
scratches on it.

Main Features:
RED Digital Readout, Split (-/S/+), memory channels,
FM/USB/CW/LSB modes, RIT, Noise Blanker, RF Gain,
Scanning Feature, Hi/Low Power Settings, and 2 VFOs.

Accessories with the package:

Communications Specialists TE-32 PL Encoder
installed, BO-9 Base Unit, Base Microphone, Service Manual
and Operating Manual. Everything works great!
I am asking $300 for all plus shipping
to CONUS only please.
If you are interested in it, please E-mail me or call me.

First, the 2-meter HT's are FM. The aircraft band is AM. They don't
mix! Second, the FCC and FAA require you to have type-accepted equipment
in an aircraft. Modifying an amateur HT is NOT type-acceptance. You
can use it as an extra receiver, but give up any idea of a transmitter.

You hit the nail on the head with your last sentence. There is a legal
and tech reason why you can't use a modified ham HT for marine use -
it's called "type acceptance" and ham HT's are not approved by the FCC
for use in the marine band - legally, that is!

Hi folks,

I know this borders on not really being an equipment question, but:

I've been doing VHF packet for a while & I'm now trying to do some HF packet & RTTY monitoring while I work on my General class ticket. I have a PK232 that will receive several different digital modes, but I'm having trouble getting it set up properly to 'understand' the stuff I'm hearing on HF. Every once in a while I'll run across a 45 baud RTTY signal I can copy, but sometimes I can step the TNC through every speed it has & I just get gibberish. I've also heard some packet on HF, but I don't have any idea what data rate to set up the TNC for. Is there a typical data rate for HF packet? How do you tune packet in on SSB with this TNC? If anybody has any helpful hints for making the transition from VHF to HF digital modes, I would certainly appreciate it.

Thanks,
Rodney - KF4COV

I mounted a NMO mount on a right angle bracket on the cowl. It is mounted towards the front to minimize interaction with the cab. Since I swap radios almost as often as I change my socks, I laid my Kenwood tm-732a on the sloped front of the center console and secured it with a small bungee cord. This locates the controls conveniently under my right hand. Power is supplied by a pair of #10 wires fed through a convenient rubber grommet through the firewall directly to the battery. The antenna cable feeds back through another grommeted hole in the firewall.

The only problem I have noted is that with some small radios (notably some of the Kenwood radios) inadequate DC filtering causes alternator whine to come through the speaker. Interestingly, with the tm-732, I get alternator whine even with the volume turned all of the way off. Quite annoying.

After a bit of searching, I've tracked down the source of my constant 10-over noise level on the lower bands to the Motorola CyberSurfer cable modem connecting to my Cox@Home service. Removing the cable connection and the lan connection has no effect on the noise. The noise is pulsing static over approximately 2.0 - 4.5 Mhz. Hate to disconnect my Internet access to use the radio as I'm the proxy "ISP" for the other computers in the house.

Any suggestions on what to try would be greatly appreciated!

Tnx es 73

Source record: 103794

Considering the FT-847 as an all around HF/VHF/UHF rig, and would
appreciate user comments across its full frequency spectrum,
especially as compared to competing rigs. major points of interest:

1. internal noise floor - especially VHF/UHF
2. VHF/UHF sensitivity, image rejection.
3. Does it have a built-in antenna tuner - what bands, any good?

All comments appreciated...

I'm also interested in the 847 - or SOME rig covering HF-VHF - since
you seem rather unimpressed with the 847, perhaps you have a
suggestion for something better? I would consider dropping the HF
portion, and focus on VHF/UHF coverage if there was a substantial
benefit in performance to justify dropping HF from the mix - I know
Icom has a couple of contenders - do you have a comment?

You might read my other post on the subject to get a better
perspective on my questions...

Thanks.

Thanks for the message. It's very useful in my quest into amateur radios. Since I am new, can someone also enlighten me what's a "mobile crossband setup"? I have seen two posters talking about it. Used in conjunction with a weaker handheld.

Thanks,
--Weiyun

Hi,
With regards to your questions :
1. the max. voltage for a BP7 is 9.6V....
2. I guess the batt. for HTX-202 will fit.
3. You can't use the radio while on charge if you are using the wall charger, however if you hookedit up to a 13.8V external power supply or car battery, then you can simultaneously charge the radio and transmit. The normal charging time for the battery using a wall charger is 14 to 16 hours...
I hope this will be a useful guide for you. Enjoy the hobby !!!

Have COX cable replace the modem, and if the new one does it too,
file an RFI complaint with the FCC with copies to Motorola. Good luck.

> with the complaint? what were you causing interference to? thanks,
> Mike
Hey Mike
I'm wondering what your useing for a antenna. Tim is right if you keep
you power low you shoulded have much problem with interferance. You
should able to get out pretty good with low power just before the sun
goes down on 75-meters CW. 40-meters will be a good band for low power
in the morning you'll be fine with CW. I would stay away from 20-meters
but 17 12 and 10 are going to be great for a while.
When I was in my 20's and singal I had my ham station setup in a
apartment building. I used the drain gutters going accross the back of
my building. Sheild side went to one down pipe and the center conductor
went to the other downpipe. It was a darn good antenna with a tuner. The
down spouts acted like open wire feeder and the antenna was about 300 ft
long. That was in the middle eighties. Ten sucked but 15 was great for
voice and 40 was great for CW.

I have been using mine for abt 2,5 months with no problems what so ever. I use it heavy on CW on all bands (particulary on HF/6 m) and even though it have been rather hot during contests I have had no problems at all. I dont have it installed in my car.

Of course, it doesnt make my FT1000MP useless but as a second rig it is perfect! And thats how it is - dont compare the FT100 (or the 706 for that sake) with a *real* one-band station with same price as one of these small *wonder* stations.

But for the price and for my purpose (second rig on HF which is my main interests, the only portable rig for vacations, the only rig for 6m/2m/70 cm for SSB/CW) the rig is absolutely perfect. It performs fb!!

Hello,
I'm having a problem with the UTC offset. My PC is set to local time. In the program under the menu bar it has listed UTC, Date and Local time. The date and local time are right but the UTC offset is 3 instead of four.

I tried deleting the parameter and config file without success.
I looked in the PK232MBX book and see no options for fixing this.
I also checked every menu in the PC Pakratt and saw nothing listed for UTC time.

I also run an APRS station with the PK232MBX and APRS Dos software and the times are correct with that.

Any help will be greatly appreciated.

Source record: 103807

Hi guys,

Well, my HT's battery pack finally gave up the ghost and I'm looking to get it replaced. It's a 7.2V 700 mAh NiCd pack, which I can replace for about $50. Another option is to get my existing pack rebuilt with NiMH cells (same voltage, 1500 mAh capacity) for about $10 less. I'm not sure which route to take, as I have heard that NiMH cells don't do as well with the intermittent high current demand of a transceiver as NiCd's do. I do like the idea of doubling my capacity, though. Does anyone have any more information about the differences between these cells and/or recommendations about which ones to use? FYI - My HT runs 1.5W at full power with the 7.2V supply.

Thanks for the help,

Rodney - KF4COV

1063. Mod to Tx on aircraft band

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-15 00:00:00 UTC
From: Rick Blum <pensions@mindspring.com>
Message-ID: <7mkigm$3f4$1@nntp9.atl.mindspring.net>
Source record: 103808

I will shortly be getting my private pilot's license. I want to have a backup radio with me in the plane. There are radios listed in my latest catalog from Amateur Electronic Supply showing radios that receive the aircraft and navigation bands (108 MHz - 136.975 MHz). My question is, given the fact that I think it's time to replace my old ICOM 2GAT 2m HT, what would be a good HT to consider and how could I get the radio modified to Tx on the aircraft band? Another question, since the HT is basically not made to Tx in that range, after modification, how good a Tx would I get using the antenna that comes with the HT? What does a mod like this cost and where could I get it done?

Thanks for the help

G'Day and Thanks for reading this message..!

As the Subject suggests, I would like to know if someone
could give me any constructive comments regarding the IC-207H. If another
amateur has had personal use and has comment regarding the quality and
performance with the radio it would be much appreciated . I have purchased
a FT8100R and am very happy with it.. I am interested in looking to buy an
IC-207H, to replace the radio in the car and put that FT-8100R in the shack.
I thank you in advance and look forward to hearing some comments from other
amateurs.

Take care and many thanks..!!

Not likely you'll be able to acomplish that mod. Ham HT's operate
via FM modulation, air bands are AM. The wide-receive HT's have
AM detectors built into them (quite simple, really), but do not
have the ability to transmit AM. Note also that it's illegal to
transmit with a non-type accepted device outside of the ham bands
and Part 15 provisions.

Boy, you want it ALL, dontcha? :) The classic conundrum - buy a mobile (better power, better antenna, better filtering) or buy an HT (better portability). There's no advice anyone can give you that's better than your own choice. I prefer an HT because portability far outweighs all other considerations and I'm not often operating from a car. Others are veritable automotive-gypsies, and a mobile is their only sensible option. Hey, here's a novel idea: buy one now, the other later! Unless of course you upgrade and blow all your money on HF gear... :)

Good luck, have fun, and keep upgrading!

"Rodney Isom" <sorry@no.spam> wrote:

>> ...NiMH or NiCD...

If you go with NiMH - get a NiMH charger.

NiMH cells only last approx 1/2 the total charge/discharge cycles of modern NiCd cells...and they need to be charged properly for maximum lifespan.

A NiMH charger has a different charging algorithm than a NiCD charger...and takes heat into account - which is a dire enemy of NiMH cells.

The best unit I have encountered under $300. is the Maha MH-C777a Universal NiCd/NiMH charger - for packs from 4.8 to 12VDC. It adjusts for just about ANY pack you'll encounter - no "cups" to buy. And it has a heat sensor.

HRO has these - and since your order will just break the $100. point, NO SHIPPING FEE!

Weiyun, make sure you ask the hams in YOUR area about power needed.

I have a VX-1R, and it does NOT reach the local repeater (about 5 miles distant) while my IC-T8A can reach it. I live in the flatlands of Michigan, and there are none of the 1000-foot hills that other posters told about. Repeaters are on buildings and towers, and the terrain makes a big difference. Theres a street nearby that goes down into a slight depression, and everyone around knows that HT's often drop the repeater down there. You folks from out west are spoiled! (and I'm envious).

On a ski hill last winter, we had the VX-1R, the T8A, a Standard (model unknown) and an HTX_202. The person with the VX-1R could always hear the others, but frequently was not heard if they were in any kind of depression.

So - bottom line - the power CAN matter, but it might not matter for your needs. Find out where the repeaters are near you, and ask the local hams for advice. Make the best choice you can and run with it.

Source record: 103825

I have a 706MkII. Refelecting other comments:

o Mine works well on HF; I have optional xtal filters for it (CW and SSB)

o The noise blanker seems very effective for mobile use on SSB.

o Every MkII I've heard has noticable PL sound on 2 meter FM .. and there appears to be no adjustment of fix (I even drove it to Bellvue, while driving from CA to Canada, to no avial. Since I have a Kenwood FM tribander in my car, no big deal .. but to some it might be. So far as I can tell, the original 706 did not have this problem.

Today, if I did not have the 706MkII, I'd buy an FT-100 .. partly because Yaesu service is a 30 minute drive for me, and they are very responsive in repairing failures (VX-5R needed a new PA) and upgrading problems which appear in new models. But the 706MkII works well for me on HF mobile (mostly 20) SSB and as a backup base radio on HF.

Take a look at the schematic. You'll notice that the noise amp pick off
point is *after* the IF filter. It should be *before* the filter. Just cut the
trace and jumper to a point ahead of the filter and the noise blanker
will be much more effective.

And once again the net twit Tim makes a claim about the FT-100 that is totally bogus.
Either that or Tim needs to go back to school for a few lessons in basic math. The list does have a running post of the number of returns for problems and It sure does not reach the proportions that Tim hints at.

If I remember, there is only one person who has sent his rig in more than once.

Bottom line. Some of the early FT-100s did seem to have a HF driver problem. Fixed under warranty. The return rate has seemed to drop off. I am a FT-100 owner who has had no problems.

The FT-100 does have some limitations because of it's size. I would not buy one to use as a home station but it is just great for mobile or portable use.

Hello All,

I have a Kenwood TR-9000 2m All-Mode rig for Sale or Trade. It is in
100% working condition. The radio does have some minor
scratches on it.

Main Features:

RED Digital Readout, Split (-/S/+), memory channels,
FM/USB/CW/LSB modes, RIT, Noise Blanker, RF Gain,
Scanning Feature, Hi/Low Power Settings, and 2 VFOs.

Accessories with the package:

Communications Specialists TE-32 PL Encoder
installed, BO-9 Base Unit, Base Microphone, Service Manual
and Operating Manual. Everything works great!
I am asking $300 for all plus shipping
to CONUS only please.

If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Hello All,

I have a Yaesu FT-50RD for Sale or Trade. It is in great condition!!!
This is the one with FTT-12 Keypad, which allows for
CTCSS & DCS Encode/Decode, also a Built-in DVR (Digital Voice
Recorder).

It is 2m/440 MHz, but also has the following
coverage:

The HT's TX Range:

121-222 MHz
222-232 MHz
311-399 MHz
400-504 MHz

The HT's RX Range:

50-221.995 MHz
222-299.995 MHz
300-399.95 MHz
400-539.995 MHz
590-999.995 MHz

No gaps on the above!!!
The RX/TX coverage is only
guaranteed in US Amateur bands.
For more info on this HT, please check out these links:

http://www.yaesu.com/ft50.html
http://kq6mu.8m.com/ft-50r.html

This HT has the original box, manual and packaging. Also comes with
the 5 Watt 9.6V 600 mAH battery (In excellent shape!) FNB-41, the
FBA-15 battery pack and box, original rubber duck, charger, & Premier
Ear/Mic. Hate to get rid of it, but need the money. I am asking $250
for all, CONUS only please.
If you are interested in it, please E-mail me or Call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

Thanks & 73,

I sent my Kenwood tribander to Kenwood for repair. It had a problem with the two meter transmit being cut back by the protection circuit. They returned the rig with two diodes and a bill for $198.00. When I sent it in I asked them to contact me if the charge would be very much, they didn't even have the courtesy to do this. I can afford to pay but I am sure that not all hams can. I AM GOING TO DUMP THIS RIG AND I WILL NEVER DO ANY BUSINESS WITH A COMPANY THAT FEELS SO FREE TO ABUSE THEIR CUSTOMERS. SHAME ON KENWOOD. ANY COMMENTS?

The Type Acceptance criteria don't explicitly make an exception to the
no user accessible frequency adjustments rule, but I expect you might
be able to convince the FCC that the setup you describe was acceptable.
They shouldn't care that it is tunable in the ham bands as long as it is
properly channelized in the marine band.

Hi all,

I'm designing a 1-10 MHz Class AB broadband power amplifier, 50-100 W pulses, 10-15 W average into 50 ohms, for an ultrasound application. I'm having trouble finding a good source of output transistors, bipolar or FET, since most transistor manufacturers are deserting these low frequencies for the cellular band and above these days.

Can anyone recommend some good production transistors for this type of application? I would also welcome app notes or design schematics, but I do have a circuit already for NPN bipolars which should work.

Many thanks,
Gerrit Barrere

Just about any device that's characterized for VHF/UHF will also work at HF, but you may need to be unusually careful about circuit layout, Z matching, and parasitic suppression. It's usually better to stick with the old rule of device cutoff frequency <= 10 * the maximum desired operating frequency if you have a choice.

It's amazing how many cheap, nifty RF power devices are available these days for 800 MHz.

ANY power junction transistor intended for linear SSB operation up to 30 MHz will do the job nicely. Look for Ft, the transition frequency, at which the current gain has fallen to unity at 150 MHz.

Although in your application the average power output is only 15 watts, it should be remembered that transistors are rated on peak-volts and peak-amps and you should select a pair of transistors rated at about 50 watts each. They are very common in this power range. But I do not have any manufacturers' data books to refer to.

You need a pair of PA transistors as are used in the very popular 100 watt SSB HF transceivers. The transistors are usually of USA or Japanese manufacture and should be fairly easy to obtain.

In my Icom 100-watt, DC = 14-volt, transceiver PA there are a pair of Japanese silicon junction transistors type: 2SC2904. But I am sure there are many alternatives.

Your low average power requirement will allow you to use a much smaller heat sink than is used in HF transceivers.

A pair of field effect transistors, normally used as fast, nano-second, power switches will also do the job very efficiently with lower current and higher voltage DC power supplies. If you are interested only in pulsed operation, not in input-output linearity, then this may be the best direction to go. But I have no practical experience of power-FET driving requirements.

John,

Thanks for the reply. What you say about the wider BW devices working fine at HF is quite true, but I've found that they do tend to be more expensive than the lower BW types. My first choice would be a cheap low-to-mid HF variety with no GHz oscillation tendencies, but if I have to I'll look more closely at the higher fT types.

What I've found is that they are less common than you might think! And the
manufacturers are thinning out what's left.

>

This is just what I was after. I know there will be Icom 100 W SSB transceivers
around for some time yet, so the 2SC2904 or similar is probably a safe bet to
design in. Many thanks!

1114. Yaesu FT-2600M Packet performance

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-16 00:00:00 UTC
From: Dave G <Dave-broken@dcg.org>
Message-ID: <378F252E.A4E15EC@dcg.org>
Source record: 103609
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

Sporting an easy to use dedicated data connector, we thought that the new Yaesu FT-2600M just might be useful for 9600 baud packet in our local TCP/IP network. The connector provides separate and isolated inputs and outputs for 9600 and 1200, plus Yaesu includes their DCS or Digital "PL" in the radio, a characteristic shared by the commercial radios we've used successfully (Ritron & Motorola).

Unfortunately we were disappointed with the performance of this radio at 9600. As near as we can tell, Yaesu fell short in two important areas:

1.) To be good at 9600 baud packet, radios must have a reasonbly flat transmit audio response down to a few Hz. This is because the modulated waveform of 1's and 0's does not average zero, having the effect of varying the average frequency at a low rate. The commercial rigs address this by applying modulation to both the varacter AND the VCO, allowing the radio to be accurately modulated down to 2 or 3 Hz. Yaesu didn't do this, thus the transmit frequency response falls off sharply below about 50 Hz. Good enough for CTCSS, but not 9600 baud packet.

The best we could do with strong signals was about a 30% error rate.

2,) On half duplex circuits, minimizing TXD improves performance dramatically. The receive to transmit delay of this radio is slow, requiring a TX Delay value of 200 ms or so to work at all. The commercial rigs include specific synthesizer speedup circuitry, allowing TX Delays as short as 80 ms.

The only thing we've found faster, are the (few and far between) crystal radios or the multimode rigs that are way too expensive to dedicate to a network.

The FT-2600 is great little rig that I liked a lot for 2m voice work, but performs poorly for 9600 packet.

Source record: 103610

There used to be quite a market for these conversions especially with the early crystal mixing units. I just sold my converted rig last summer. I think that most of the CB rigs sold now are virtually impossible to put on 10. There are some 10M rigs out there from Azden and others. Most of them include 10 FM which is kind of fun through the repeaters. You might try one of the companies that are on the web with new and used rigs. Hope this helps.

Hello Vinny....I had the same problem. Can't remember exactly what I
did to fix it but it had to do with the computer time format. The
solution was easy once I figured out what to do. Damn I wish I could
remember. However, it has to do with the computer time format versus
the program time format. There is an option in the program that allows
you to select time format that is separate from the time setting.

Anyway, it can be fixed easily....with a little luck. 73 de N7IOK,
Clyde.

1126. Re: QST: FT-100 vs. IC-706MkIIG

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-16 00:00:00 UTC
From: Chris Bauer <cybauer@abcprodigy.net>
Message-ID: <7mmd0g$2k72$1@newssvr04-int.news.prodigy.com>
Source record: 103642

Hello all,

I've been reading all the FT100 threads including this one and would like to offer a couple of thoughts.:

I took delivery in mid-April. Still works fine to this day. No problems at all. Mind you, I make sure the antennas are disconnected whenever I shut down ops.

So far, my FT100 has been a home base rig...and it works fine for me. I have an Astron 35A power supply that I leave on all the time. This way, the rig doesn't get nailed with a power supply turning on every time I use the rig. I enjoy tuning around, working a couple of SSB stations, and doing some ragchewing. I've received great signal and audio reports from day one. The DSP does a great job.

I use the FC20 for my G5RV, and it works just fine. Even tuned up 6m on both the G5RV and my TA33Jr.

Overall, I would say its a great little rig.

The pigtails are something to be concerned about. I'm contemplating ty-wrapping the short pigtails to some sort of lacing bar attachment that I might add to the back of the rig. I'm also considering adding the other filters, although I hear that's a job for small hands...

Someday, I hope to throw it in a vehicle and play radio on the road. Currently, I drive an 86 Trans Am...not much room for antennas or a radio...Maybe when I spring for the SUV, I'll field test the FT100.

Hope this helps anyone who needs some FT100 feedback.

Chris

>Type Accepted for marine band use because of the potential for
>interfering with safety of life transmissons.)

Technically, it wouldn't be difficult to provide firmware that
allowed continuous tuning (or as close to continuous as the synthesizer
allows) in the amateur bands, but which switches to tuning using
standard marine "channel numbers" when in the marine band. Provide
a typical marine HT user interface in the marine band, and a typical
ham HT interface in the ham bands.

Assuming the radio is up to snuff in other respects (frequency stability,
spurious output, etc.), is there any reason such a radio couldn't be
type accepted for marine use, while still providing 2 m ham operation?

Source record: 103659

!! please remove _R_E_M_O_V_E_ to send me e-mail !!

Hello dear ham-friend,

i am looking for information about dipmeters. I bought a Leader LDM-815
(equal to MFJ-201 or MONACOR, with that big frequency wheel at the top)
at the ham-radio but did not get a manual.

- Do you have a manual of the Leader dipmeter LDM-815 (or MFJ-201 ..)
and can send me a copy by letter (i can send my adress in the next mail)
or a scanned version by mail (remove REMOVE in the mail-address).

I am also looking for informatons:
- How to use a dipmeter to measure RESONANCE of circuits, antennas .. ?
- CIRCUIT-DIAGRAM of the LDM-815 ?
- How to add a SIGNAL OUTPUT-connector (e.g. BNC) to the LDM815 for a
frequency counter ?

Many thanks for your help.

Michael Goerg , DL3DCM / KG0UB ..

After a slightly bumpy start the H.F. Transceiver survey is off and running. A few individuals discovered the program was in test mode and voted for their favorite rigs several times. This has been corrected and graphics represent the survey accurately.

Some asked why transceivers of the 80's and past were not included. The reason: We wanted to get a better feel for how the market has led us in the 90's and perhaps gleam a little into the future.

If you have not voted on your favorite H.F. rig, feel free to do so. This survey will run through July. Also, check out the HR Showcase site. We think you will find some interesting links and original content as well.

1147. Hepl! Motorola R2004 Service Monitor Question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-16 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <7mnd6rflk1@nnrp1.deja.com>
Source record: 103663

Greetings,

I have a Motorola R2004D (no manual, but looking for one or a copy) and need to know how to use the Duplex Generator for some simple tests. If I understand the concept correctly, I would like to generate a signal and see it on the scope/receiver after passing thru my equipment at the same time. Would also like to generate a signal on 146.355 to trigger our repeater and look at its output on 146.955. My test is to generate a 4kHz (dev) tone, and see the translation of this tone on the output.

I should also be able to generate a signal and look at it after a 200' roll of coax to see line losses.

I can generate, I can receive. I don't know how to do both at the same time.

Any pages from a Motorola R2000x series would be a big help.

Al, NW2M

OK, after consultation with some very helpful folks out there, I've determined that I need channel elements for the exciter and receiver, plus a service manual if there's one out there.

I think I'll need 443.975 for the RX and 448.975 for the exciter (have to check with a coordinator for the freq I'll eventually be on, but for now I'm using a locally unoccupied pair at low power..) I'll also need instructions for retuning the RF stages, hence a manual, since it's currently peaked up for the 451/456 band. If I can get a good kerchunk out of it, I'll be on my way .. ;-)

I have an Amp. Supply model LA-1000A desk top linear. It uses four 6MJ6 or 6LQ6 tubes in parallel in grounded grid configuration. (I have the plans to change to Svetlana EL-509 tubes if so desire). Tubes are not driven hard and put out 600 watts. Unit is very clean inside. Filter caps are good shape and have been beefed up.

1157. FT-100 Installation

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-16 00:00:00 UTC
From: Randy Biesel -N5ISV <rrb5@flash.net>
Message-ID: <378F4237.A0693B7D@flash.net>
Source record: 103673
Cross-posted to: rec.radio.amateur.equipment,red.radio.amateur.misc

Does anyone have a good solution for running the 3 separate wires for the remote head on the FT-100, My only thought was to buy 17 feet of heat-shrink tubing and place the cables inside the tubing . Mind you I want to mount the radio in the back end of my Ford Expedition. The Icom 706Mk2G only has a single remote head cable which would be much easier.

Michael,
You may be able to find information on the MFJ website. They did have a lot of their manuals "on-line" for reading. Hope that helps on that part. The ARRL handbooks have info on how to use a grid dip meter. That may well be the best place to start if you are new to using one.

What 800-900 receive capabilities does the W32A actually
have? The QRZ mod only says that it broadens 2M and 70cm
frequency ranges. Is there another mod, and where can I
see it?

best regards,

Martin

Actually I don't see the survey doing anything but showing a popularity contest
for a particular model of radio.

I would think that such a survey would include categories such as:

Mobile or Fixed?
Operating style - Contest, DX, Public Service, and such.
Mode of operation - CW, voice, Data

Also what prevents a person from taking the survey a couple hundred times?

A good place to check into several brands of UPS's is at PowerPros....they
handle APC and 3 or 4 other brands.

http://www.powerpros.com

Personally I use the APC Back-UPS Pro 420....I got it on sale from PowerPros
for $179 about 2 yrs ago. Still working fine.
The site for just APC brand is...

http://www.apcc.com

Hi Randy,

I remote mounted mine in my Ford Explorer and did not have any problems. The radio body is mounted in the left hand side panel that holds the tire jack in the back cargo bay. It was very easy too pull the floor panels from the left side doors and under it is a cable conduit. I pulled the cable conduit cover off and just ran the cables in it.

I ran the speaker cable up the divider between the front and back doors and mounted the speaker just behind the drivers seat.

The mike and control cable were run to the front and then under the dash to the center. I mounted the mike connector box to the side of the center console with some double stick tape. The control faceplate is mounted at just above the air-vents at the top-center of the dash. I fashioned a couple of brackets and again used double stick tape to mount the bracket to the top of the dash board.

To get from the back door cable conduit to the rear panel just follow the same path as the wiring harness that is already there. Use a piece of 10 or 12 gauge wire to fish through and then tape the other cables to it to pull them through.

Having three cable actually made it easier because I was able to mount each item in the best place for my needs.

Of course I am assuming that the Expedition has the same basic wire routes that the Explorer does.

You might want to sign up for the FT100 mailing list on www.onelist.com.

Good Luck

I removed the "pocked" underneath the AM/FM radio and installed a radio there. Or, you could install a police vehicle radio "tree" on the passenger side, running along side the transmission hump mounted to the floor and hump. I work in the inner city, so I only use magmounts and pull them off everytime I park. Never had a breakin yet!! :)

HI.

I have a Kenwood TS-570s [not (g)]that is in great condition (looks new) that I must part with even though it is the best radio I have had. Comes stock with hand mic, both orig. boxes, manual and a MC-60A desk mic. (MC-60A's stand has a few rough spots and dings but mic is in good shape and works 100%). If you want a (g), Kenwood will upgrade for $125.

Make an offer! (the usual going price for a stock TS-570s is $900 to $1000)

Also have YK-88C 500 Hz CW IF filter I'll sell separately for $55.

Just a thought. (Just thought of it in fact.) Would a Pipo Touch Tone Pad wired to an RJ-45 and attached to the other microphone port work? You would have to have some way for the Pipo side to key up the rig and maintain it keyed while putting the tones out, then disable it to switch to the other mike. I know Icom does not recommend having mikes attached to both ports, simultaneously, but this might work. Let me know what you eventually come up with...

Ed,

Motorola is one of the culprits I've already indicted. Their app notes for HF power amps are old, many of them specify transistors which Moto has discontinued. The reps and app engineers I've contacted don't have suggestions for replacements. I get the clear impression Motorola is phasing out their HF power discretes.

Thanks for the encouragement! I get so fed up with hams that make insultingly low offers, hoping to get something for next to nothing, then act put out when all you want is a reasonable offer! I have two REAL offers on it now and probably will have it sold this weekend.
Have a good day!
Chuck

I was given an Azden PCS-4000 by a friend, and I need some advice. The mic intermitently works, can it be easily replaced? Also the speaker (and external jack) doesn't work. Would it be worth my while (or money) to have it repaired, or was I given a boatanchor?

Source record: 103490

No freebie is a boat anchor per se. The mike problem could be solved by checking the connections on both ends and the speaker problem might be a simple matter of it has come disconnected (usually a small, two conductor connector) from the motherboard due to handling or someone looking inside for something. The external jack might be dirty. Lots of possibilities. Check it out first, yourself, and then check with a reputable repair shop to find out if it is worth it.

I have an as new Icom dual band ht with several options. This ht is in perfect condition and is a 10 out of a 10 functionally and cosmetically. This ht has a detachable front panel which will let you use it as a speaker mic. and will show all information digitally on the microphone. The Z1A has an alphanumeric memory display, alphanumeric message and paging, backlit keypay, independent tuning knobs plus many other features. This ht has an extended receive from the factory and there are many modifications that can be done to enhance this radios capabilities.I am selling this ht with two Icom BP-180 Ni-cad battery packs which are both in excellent condition, two new Maha MH-BP-180 Ni-MH battery packs which were bought at Dayton, BC-79 rapid charger, CP-12 cigarette lighter cable with noise filter, HM-46 speaker microphone, new Radio Shack vox headset which was bought at Dayton, soft case for ht and a Comet tri-band high performance rubber duck. I am the original owner and have the boxes, owners manual, sales brochure and all of the standard accessories that came with the unit.
$300.00 plus shipping. E-mail me at: n8ihs@home.com

That actually sounds pretty good, Bill. Li-ion batteries typically lose 30% of their charge per week when idle. So you shouldn't expect it to hold a charge very long. The radio does draw a small current when off, the uP has to wake up and check to see if you're pressing and holding the power on button fairly frequently, otherwise you couldn't turn the radio on. So the battery won't last as long while in the radio.

The solution to your problem is to use the radio more often. :-)

Another characteristic of the Li-ion battery chemistry is that it doesn't mind being partially charged. So an alternate solution is to just charge the radio fairly frequently. There is no need to wait until the battery is completely discharged. The charger built into the radio is smart enough not to overcharge the battery. I charge mine every time I get in the car, whether it needs it or not. That way it is always topped up when I get out and need to use it.

Tim,

The schematic will not show the actual number of turns on the tank coil.
The simplest way would be to set the bandswitch to either 10 or 160.
The entire coil will be on 160 and the smallest amount of coil/turns
will be for 10 meters. Just line it up like that. Also you will find
that on the LOWER FREQ. bands there will probably be a capacitor or two
that is switched in/out on the low bands ONLY.

1209. FS: ### 16ch VHF MOBILE RADIO

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-17 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19990717122101.03152.00001835@ng-cg1.aol.com>
Source record: 103557

For Sale: Maxon SM-4150 VHF Mobile Radio

16 channels
40 watt output (adjustable)
148-165Mhz
Channel scan with dual level priority
CTCSS/DCS tone signalling blocks out unwanted calls
Busy channel lockout prevents transmission on a busy channel
Time out timer prevents excessive transmission on a channel
Fluorescent channel display with dual intensity
PC programmable
Radio comes programmed to your specs

Get complete specs & details at
http://www.maxonusa.com/products/prof/sm4000.htm

This radio has a vacuum fluorescent display for channel number, and has color LED's for "Transmit", "Busy Channel" and "Call". Radio is in excellent shape (8.5 out of 10 cosmetically), and comes with heavy-duty mic. It's about 6 months old and is in 100% working condition...

Looking for $300/OBO plus shipping from Maryland. Please email PDFDISP@aol.com with any questions. Picture available via email on request.

1210. FS Swan 406 VFO

Message-ID: <7mqclj$1ic$1@holly.prod.itd.earthlink.net>
Source record: 103559

I am trying to set up an HF station so I need a little of everything. I have the following for trade.

Apple IIGS 1.25 meg color monitor several disks plus lots of software. Works and a GOOD keyboard (the weak point).

Apple IIGS 8 meg 20 meg HD color monitor plus lots of software and also a GOOD keyboard. ("WOZ machine")

Both have system savers and are cosmetically nice. All cables etc. Software is generally original and no longer available. Word processors games graphics included.

Macintosh Performa 200 with a 20 or 40 meg HD and a bunch of software. Looks like a "classic" mac. Nice keyboard about as powerful as the SE etc.

I am looking for Ham stuff to get a station up and running. Coax, antennas, or miscellaneous would be considered.

A transceivers popularity is determined by perceived value, cost, performance and features. Some of these may be justified, some may be useless in real day to day applications. We hope to expand upon that.

They survey has adequate security to insure that those who are not quite on the level would have to devote thousands of hours to tamper with results.

Get a used Motorola HT and program 2m and marine channels into it. As far
as I know, they are type accepted for Marine use, and of course you can use
them on the HAM bands. Also, Motorola makes a marine radio which follows
the design of the popular GP-300 radio. Good luck.

From: wizard@ihs2000.com
Message-ID: <3790d703.364025784@news.ihs2000.com>
Source record: 103567

Wide band transmit mod for the IC-706 MK II G requires removal of diode D.2030. Remove top cover to access main board. Locate IC chip 4052C-8713. Looking at the chip and reading the number from left to right, look just left of the chip to locate 11 solder pads running up and down. Diode D.2030 was the tenth diode from the top of the solder pads on (USA Version) radio. Remove diode. This modification opens up transmit on HF, VHF, and UHF bands.

>radios we've used successfully (Ritron & Motorola).

>Unfortunately we were disappointed with the performance of this radio at
>9600. As near as we can tell, Yaesu fell short in two important areas:

This is the usual practice for Japanese FM radios... they put the
connector and the label on it because the buyer wants to see that, but
otherwise they are just as unsuitable for packet as the earlier models.

I have an FT-212RH and an FT-712RH and the characteristics are exactly as
you describe. Only you have to make the external connection yourself
before you'll find out!

BTW, 80ms txdelay is LONG. A local node uses an AEG/Telefunken "Telecar"
commercial trx and it works well at 20ms, txdelay set to 30ms to allow
for some extra delay at the receive end. It also features DC-coupling
of the modulation! A variable DC voltage on the input lets you tune it
a few KHz up and down. Ideal for 9k6!

Tekk transceivers are similarly fast. 10ms would probably work as well
but the timing is done in 10ms steps and has a 10ms uncertainty.

1231. Icom 706 and touch tone autopatch? Help!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-17 00:00:00 UTC
From: "Michael J. White" <mike.white@erols.com>
Message-ID: <7mqqtvnmi1@autumn.news.rcn.net>
Source record: 103579

I'm using my IC-706 as my only mobile, and want to be able to use the 2 meter repeater autopatch. The problem of course is that the 706 does not come with a touch tone mic. I've tried using one of those pocket dialers you hold up to the mouthpiece of a telephone, but no luck; the tones aren't loud enough. I've even tried hacking the pocket dialer to increase the gain, but no luck even with slightly louder tones. My next step is to hard wire the tone generator into the 706's mic via a small plug, but I hate to carve up the mic like that. Icom doesn't list a touch tone mic as one of the options for this radio. What do folks do? Any help will be appreciated. Thanks.

Yaesu in Cerritos, Southern California is nothing to write home about. They do not read the letters you enclose about what is wrong. They ship radios to you uninsured UPS even though you brought the radio in to the place in person and never told them to ship it. My 736R is in their shop for the 3rd time for the exact same problem. I have also had bad experiences 2 times with Kenwood in Southern California also. Technician told me that my TS120 was working perfectly, even though I knew it was almost DEAF. I took the radio and tested it...of course it was not fixed. Sent radio back with a RUDE letter and that time they fixed it. Such is life.

I've been following along, and would have bet you'd be able
to get permission to put a flagpole up! That's one of those
arguments that the dogma/rules people would have a lot of
trouble defending a 'no' position on... I'm filing away
your solution for future use...glad everything is working
out for you.

Side note - maybe somebody makes a sturdy fiberglass
flagpole that could have a copper strip glued to and painted
over? Maybe not great for HF, but if you could bury traps
in it, maybe a colinear VHF? (Hey, just guessing!)

Everybody's been correct on this, just wanted to add - Don't
give up on having a hand held air radio just because you
have to buy a real one! I'm not a pilot, but I've flown in
many club/rental planes that had flakey com radios,
especially if it isn't an IFR rated plane. Not being able
to talk to the tower sucks. Friend's club had their IFR
plane wired with a coupling between radios & aircraft
antenna so you could use the planes antenna if the
electrical system died. (Which also seems to happen a lot
on light planes...)

You *might* try sporty's pilot shop, maybe they have a less
expensive model of radio.

There are a bunch of so-called 10 meter rigs being sold to Cb'ers, but they are all pretty much junk with pretty knobs. Uniden made a pretty good 10 meter radio, the HR2510. It was built pretty well and had good performance. You can find them used for about $150-200.

In my opinion, short of buying an HF rig, the 2510 is your best bet. All of the CB "10 meter" radios like RCI, Galaxy, and a bunch of other unknown names that I have seen are all designed for profit, not performance.

1241. Re: Any place to buy inexpensive double conversion UPS?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-17 00:00:00 UTC
From: noone@nowhere.com
Message-ID: <37960df1.321521063@news.squonk.net>
Source record: 103618

First, the point about under-voltage is valid, as long as the AC-DC section had a lower acceptable input range than the PC's power supply in question. Note that this also applies to the spike issue - if the spike blows the UPS AC-DC section, it could be more expensive to repair than the PC's power supply. (Assuming that's what blows.)

If you're considering running from an unregulated generator (which I wouldn't suggest in any case), the AC-DC-AC solution may be perfect. You could probably even get a DC output generator and run DC-AC.

But for what you want to do, here's my 2 cents:

Get an UPS smart-UPS. (I don't make them, sell them, or own any part of the company, etc.) They're switch mode UPS's, but, the smart units can boost a brownout voltage up to normal without switching to battery power. They also will cutout on a bad frequency or high voltage. They also switch fast enough that your PC power supply will probably never care, and they protect very well from spikes. APC has a warranty that will pay you if a spike kills your computer through their UPS, up to some crazy dollar amount like $5,000.00

Advantage of a switcher is that it's inherently more reliable (less heat, fewer parts in action normally), and less expensive. They really work great. I've used them in industrial areas, inside co-gen hydro power plants (talk about spikes!), rural areas, and had customers run them off lousy generators. (Generators kicked the units on and off battery power a lot, but computers kept running.) The smart UPS series tests it's own batteries periodically too, which is also kinda cool, as well as useful.

Source record: 103619

For sale: Alpha 78 legal limit HF amplifier.
Three 8874 final tubes, 160-10M manual tune, plus "no tune" passband
tuning on 80-15M.
Good cosmetic & electrical condition. Includes original manual.
Digital pix and other info available on request; email for additional
info.
$1550 + freight.

1245. FS: 23A/25A Surge Power Supply - Reduced

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-17 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <_eSj3.323$I2.13342@iad-read.news.verio.net>
Source record: 103622

Hello. I have a 23A Continuous/25A Surge 13.8VDC Power Supply for sale at $110 shipped UPS Ground/insured. This P/S is incredibly compact and perfect for base operation. Second to none for portable operation. Would be an excellent choice for Field Day. I have used it in several HF Worldwide Contests for 10's of hours at a time with no problems.

At the same time it has powered an 5w HT, a TS-140S at full power, and the meter in a HF antenna tuner. Lighted power switch and built in cooling fan. It runs incredibly quiet (you can't hear anything) and produces NO interference in the receiver of my HF rig (I've also heard that it won't produce any on VHF/UHF either).

Comes with AC power cord, original manual, and original box. It works 100% and it's looks are around 85%. Only about 1 year old. Let me know if you have any questions or if your interested in buying. Interesting trades are also considered. Thanks for reading!

1246. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7moqlh$a3t@news.Hawaii.Edu>
Source record: 103623
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

1248. help in reconnecting clipperton-L bandswitch

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-17 00:00:00 UTC
From: Tim <tvendt@kear.tds.net>
Message-ID: <01bed008$03dd40a0$539347cc@default>
Source record: 103625
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Greetings.... I am putting together, after several years of having it apart, a Clipperton-L amp. I had put some of the spare parts in an envelope with the drawing of how the bandswitch was wired to the tank (I left the wires connected to the tank itself, just unsoldered them from the switch). Well the parts were found but no drawing!! The schematic is somewhat ambiguous as to what wires go where...ie. L1 on the schematic has 2 wires coming from it but on the actual tank there are 3. It's also possible that I may have gotten the orientation of the rotary part of one or more of the wafers 180 degrees out. All this info was on that lousy scrap of paper that is gone, probably forever. If anyone has one of these amps and would be so kind as to pop the top of it and get me out of this pickle I would be very grateful.

TIA

I would like to buy used police radar guns. I prefer hand held models but will consider all. I buy non working units also, including parts. Please reply by E Mail for a prompt reply.

Thanks

1251. VX-1R Battery Drain

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-17 00:00:00 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <BcVj3.1670$Zm.122901@typhoon.mbnet.mb.ca>
Source record: 103628

I have noticed that the battery in my VX-1R runs down to
the 3.1 volt limit in about 3 to 4 weeks if I leave it in
the
radio - even if it is not turned on.

However, if I take the battery out of the radio it loses its
charge very slowly - at least two months to drop below
3.5 volts.

Is this normal? Why does it happen? Can anything be done
to curtail the problem? (It is very inconvenient to remove
the battery after every use in order to prevent unwanted
discharge).

On a "10" scale how would you rate the unit physically and electrically?

How much does it weigh and where is it locate (so I can estimate shipping costs).

Thanks,

Jim Valin (K4ZDZ)
Chuluota, FL (Near Orlando)

This is a mid-1960s tube type radio made by World Radio Labs. They also made a 5 band version called the Galaxy V, and an improvement to that called the Galaxy V Mk II. I had one of the latter back then. It was possible to mount it mobile in a large 1960s vintage American sedan. There was a mobile power supply (inverter type) required to supply the tube voltages. That was designed to mount in the engine compartment near the battery. For use at home, there was a separate AC supply.

The Galaxy rigs were transceivers in an era when most ham equipment was separate transmitters and receivers. That made them attractive as mobile rigs. Their only real competition was the much more expensive Collins KWM2 or the Drake TR3. They were relatively simple single conversion designs with a relatively broad SSB filter (no CW filter). The sweep tubes used in their finals are probably pretty hard to find today, and you could quickly toast them while tuning up if you weren't careful.

The radio might have some collector value (though they made a lot of them). I wouldn't recomend purchasing it to use, however. Almost any more modern radio will be better.

>

The Al;inco credit card HTs are cool. The dual-bander is well under
$200. - and it is the one that comes with an internal speaker.

The single-band units are seventy bucks each - but you need to use an
earpiece. Well, in a noise environment like the "mall" she'll need an
earpiece anyway.

They are nice lieelt units. If it's "small" she wants, these will fit
her needs.

The Yaesu VX-1R is thicker...but has more capabilities for her.
Programming is not as simple as the Alinco credit card HTs, though. It's
like carrying a pager on her waist.

Source record: 103441

A few things you COULD do.
The original FT-530's, when modified, would TX from 110 to 174. You had to set the RX in AM mode when you wanted it. The first year or so of production also transmitted in AM when you had the AM RX mode set. Secondly, the original FT-50R's when modified would TX 110 to 200 in FM mode. If you were to offset the TX freq by 5 to 10 kHz, you could be able to talk to an AM RX radio - it's not the best but in an emergency, it would probably work.
I'm not recommending either way or endorsing out of band TX, but these are two options.

1265. Advice on CW rigs?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-18 00:00:00 UTC
From: dorn@freenet.edmonton.ab.ca
Message-ID: <7mtcd3$e5i$1@pulp.ucs.ualberta.ca>
Source record: 103442

Hello,
After a brief absence from amateur radio, I am looking to get back on the air. My ham radio budget is very limited, and for that reason, and others, I am looking at CW only transceivers. I know a little about the TT Century 21/22, and the Heathkit HW8. I know very little about the newer CW rigs. Could anyone advise as to which rigs I might look into? A little more power than 5W would be nice, but not strictly necessary.

Many thanks,
Chris VE6RDC

Do you have to replace the active components that are potted or by
only removing the potting compound the radio will be repaired?

Also,
My TS-440 will only be used in the shack, is it necessary to re-pot
the components with hot melt glue? I was under the impression that the
potting was to stabilize the VCO under severe mobile conditions.

The factory is right. This radio was designed before the WARC bands
existed. It has options for one AUX band. Adding more than this would
involved adding circuitry and switching for other oscillators, band filtering,
switching, etc. ... all in all a major rebuild of this nice radio. You'd be
better off looking for a used rig that already has WARC bands.

Ahhh, so thats it! Another r.r.a.a. antenna resistor hater. Why is it that a resistor in any other circuit is not a dummy load _____ (name your circuit)? Do you own a dummy load transceiver? A dummy load alarm clock? A dummy load computer? You resistor haters are a funny bunch, I've run across your type here before.

1277. ICOM IC-290A Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-18 00:00:00 UTC
From: George Andrews <mauser2@erols.com>
Message-ID: <7mtlibhkc1@autumn.news.rcn.net>
Source record: 103454

To All,
I have a couple of questions relating to the IC-290A. Any one have info on the nine pin plug on the back of the radio? What is the function of the call button on the front of the radio? (I know it causes the radio to transmit, with full audio. I do not understand the purpose of this). There is a connector inside the radio, J8. What was intended to connect to it?
If anyone has or can make a copy of the manual, with good quality copy on schematics (if there are any) please e-mail the cost. My thanks in advance to all who respond.

Thanks for the reply Ed.

Would you have the information on adding one of the bands - 17M - would
do?? I understand it's a xtal and some tuning??

There are a lot of great CW rigs out there ranging from qrp and up. The best source of course would be other local amateurs and local contesting groups, publications in the library (ours here carries QST, CQ and other pubs). Good luck in the search and we hope to work you some day.

TS-850SAT....purchased new by me. No dings, scratches, etc. Perfect working order and includes all the features the 850 has to offer plus I added the 500 hz CW filter. Never needed the SSB filter due to the magnificant sloper tuning, etc. 100 memories, 10 quick memories, auto tuning, etc. Features, features, features. This rig has not been used the past three years and I finally moved, put up antennas and got back on the air with it. I am in the market for a newer rig, period. I will be updating the pictures every few days. This rig is one owner, non smoker, never mobile, never field day, in the original box with all manuals, pieces and parts including extra accessory plug, fuses, etc that came with it new. It is not a rig for someone to buy and resell, it is priced at 1100.00 plus shipping.

http://www.mcws.net/pat/the850.htm

I want to sell, but do not have to sell. If you would like more information, please email.

FS High Voltage Electrolytic Capacitors

Still clearing out all the odds and ends to make room for the new products.

The following capacitors are NOS(new old stock) Mallory CG(computer grade) types. They were bought in bulk cases so they are not in boxes and do not have the lug connector screws. Prices are 30% of current retail price. Just the thing for tube amps using high energy storage power supplies.

I also some NOS capacitors that still function perfectly but have dents from moving. Great for test rigs
or test equipment, offered at 15% of current retail price.

630uF 400 VDC, 2.0" diameter 4.25" high, 10 exc condition at $ 6.00, 8 dents at $3.00
800uF 450 VDC, 2.0" diameter 5.25" high, all in excellent condition 53 ea. at $7.50 each
1900uF 450 VDC, 2.75" diameter 5.75" high, all in excellent condition 9 ea. at $14.52 each

Nichicon Snap type(circuit board mount) NOS capacitors. Came in case no individual boxes.

330uF 400 VDC, 1.25" diameter 2.0" high, 158 in excellent condition at $ 3.00 each
330uF 450 VDC, 1.5" diameter 2.5" high, 412 in excellent condition at $ 3.90 each

I'm trying to find information on connecting my Oscilloscope (HP 1740A, 100Mhz) to my HF Rig (Kenwood TS-850SAT). I'd like to view the actual keying waveforms on the scope and see the waveforms of the received signal also.

Does anyone have any suggestions?

Well, I had a rather pleasant experience with Icom in Bellevue Washington. My 2100H developed a problem (in warranty) in which it would no longer transmit, even though the radio appeared to key up. I sent the radio UPS ground insured, with a detailed letter explaining the problem and steps that I had taken to try to fix the problem. They had it back in less than two weeks, And it was shipped insured, requiring a signature. Turns out some control transistors in the power section were defective. This was about 6 months ago.....no problems since. Maybe their competition could learn.....

Hey Tony
I have the board out of a TS-930. I have heard that they are the same
and or interchangeable. I have kept mine alive for a year just fixing
holes after holes in the board. The baord is a 2 layer board that uses
holes with solder filling them to make contact. Not a good Idea. Well
mine is out of the rig and I have ordered a new board from a guy at
PIEXX co. http://www.conknet.com/piexx
They might be able to help you out.

Hi Kevin. Thank you for the information. :) I'm assuming then that
it looks like the following:

```
+-----+ +---------+
| RIG |-(coax)-+--| Antenna |
+-----+ | +---------+
|
|
<R>
|
<C>
|
Scope
```

Where <R> is the 47k 2w resistor and <C> is the capacitor

>Seeing the transmitted wave envelope on an oscilloscope is
>invaluable. You can see, in an instant, if there is flat-topping or
>overmodulation. I never transmit without one.

I agree. :) This is why I want to be able to do this. heh

>For received signal waveforms, I tap off of the last IF stage of my
>TS-440S (which is 455 kHz) with a 25 pF capacitor directly into the
>scope. Be aware that the waveshape of the received signal at the IF

>switch to my (customized) 15 kHz bandwidth.

The Kenwood TS-850 actually has an IF output interface on the back
of the rig. I believe that I can perform what you did above through
this interface. If so, that'll make things pretty easy :)

>With all good wishes,

Thanks Kevin. :)

Most rigs from the 50's on were phone and CW. You won't save money by looking for a CW only rig unless you get QRP and you ruled that out. The Century 21/22 have taken on collectors status so you actually may pay more for them. Some good old rigs like the Kenwood TS520 and the Yaesu FT101 will work fine and can usually be found for under $300. Or you could go the Heathkit DX20/35/40 route. They have been going for under $50, but then you would need a receiver. If you are experienced you can find a workable boatanchor setup and be on CW for probably $75 bucks if you use the swapmeets...

1294. Re: Yaesu VX-1R... what can you use it for with 500mW power

When the VX-1R first came out, I thought that they were useless.
Guess what! Now I have 2 of them. My wife loves her's because its
so small and light. We use them car to car, hiking, biking and
shopping. Since we live in San Jose, Cal. there are plenty of
accessible repeaters within 20 miles of us and I can reach most of them
easily. I usually run 50 mw most of the time.
I got a Pyrme RD-9 8in. whip antenna for it and gained 2 s units on
recieve.

Source record: 103498

Can anyone direct me to a source of old technical manuals and parts manuals for the Teletype Corporation item as follows:

1. Bulletin 309B (Volume 1) which covers installation, disassembly and reassembly, lubrication, and principles of operation of the component units of the Teletypewriter Sets designated:
32 Teletypewriter Sets
Receive Only (RO)
Keyboard Send-Receive (KSR)
Automatic Send-Receive (ASR)

2. Bulletin 1210B which is the parts breakdown and exploded diagrams for the Teletype Corporation 32 Page Printer Set (ASR, KSR and RO).

Your help will be sincerely appreciated. Chuck

Actually I kinda liked the data point. I was thinking of
eventually buying one, if it's that simple I'll build one
myself. I may not be able to cost effectively build a car,
or even a synthesized HF rig, but I can sure as hell build a
wire antenna!

I know what you mean about selling things, but I've been on
the other end, too. Drooling over a "$1000 if it were new"
gizmo at a dealer, that I wanted but couldn't afford, an
owner walked over, handed it to me, and asked me to make an
offer. I examined it, replied that I couldn't afford it.
He asked again for an offer, so I tossed out "$450", and he
sold it. The guy apparently wanted the cash, and I got a
deal. OK, sorry for another long winded story. I just like
our spiffy capitalistic system!

Just random thoughts

New N.Y.P.D. Radio Plan & Frequencies
By David M Torres, New York City

the following is updated radio frequencie information for the
new york city police dept. they are in the process of re organizeing thier
complet radio network which is now in phase 2 of a 4 part phase they
expect it to be completted within 2 years
phase 1 was the re organization of all city wide and special units
phase 2 is the re organization of all division radios
phase 3 will be the frequency expansion and narrowing the band
phase 4 will be the purches of new radios and fadeing out the
motorola saber's
as for the new york city fire department E.M.S. units they are also
re organizeing thier radio system from 800 trunk back to a conventional system
they will be useing motorola ASTRO saber's with both EMS & Police frequencies
i would also like to point out the phase 2 is not fully completed yet its
a very slow process and it dose take time but it is on its way so the changes
can take place at a blink of your eye

as always happy listening and keep your ears on.................

1308. THE DIFFERENCE BETWEEN THE MC-60 & MC-60A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-18 00:00:00 UTC
From: rong@computer.net
Message-ID: <3791661b.3876601@news.computer.net>
Source record: 103504

I found the difference between the Kenwood MC-60 & MC-60A microphones. I have an old Kenwood brochure, and it has a small picture and description of both mics. The MC-60 only has 2 buttons--a PTT and a PTT LOCK---no up/down, and no amplifier, and a 4 pin plug at the end of the cable.

The MC-60A has 4 buttons--up, down, and the PTT and PTT LOCK. It also is amplified, and comes with an 8 pin plug at the end of the cable, and a dual impedance switch on the microphone itself.

Evidently though, Kenwood did not change the base casting, as both the MC-60 & MC-60A only have MC-60 cast into them. So, if you have an MC-60 with the up/down buttons, an 8 pin plug at the end, an impedance selector switch on the mic itself, and an amplifier in the base, it's actually an MC-60A.

I have an MC-60A, and it is as described above. The instruction sheet says MC-60A on it, but the base casting only says MC-60. Now we all know what the difference is. If you want to see the actual section of the brochure, you can view it at:

1312. TPL Communications Inc., VHF amp (commercial), info??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-18 00:00:00 UTC
From: noone@nowhere.com
Message-ID: <37989735.422142400@news.squonk.net>
Source record: 103508

I've been given this amp, model PA3-1AC, taken from operational commercial service a couple of years ago, to boost a HT for use as a base station.

The tag says 30-45W from 1-4W in over 136-175 Mhz, but has a hand written "factory serviced to 157 MHz" tag, leading me to believe it's a wideband amp, but is tweeked for optimum performance at mid-band.

Before I start playing, does anyone know anything about this company and/or amp? Is it reasonable to expect this thing to work as is in the 2m band with a HT? (assuming it still works, of course)

Just random thoughts

1320. ICOM IC-2KL Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-18 00:00:00 UTC
From: Dave_K9NX <n7ex@athenet.net>
Message-ID: <3791D32D.7A83@athenet.net>
Source record: 103516

I recently came by a "sick" IC-2KL at a reasonable price. I finally got around to opening it up on the bench yesterday and after a few hours have determined that one of the 4 PAï¿½ transistors is blown. Which now generates the following questions.

1) The transistors are arranged essentially on two paralleli¿½ RF decks in two sets of two. Can I replace just the blown transistori¿½ or should they be matched pairs requiring replacement of both?

2) If they have to be matched is that in sets of two (per PA board) or sets of four?

3) Other than ICOM does anyone recommend a good source of these transistors..2SC652 ?

4) IS there a Motorola MRF cross to the 2SC652

5) If I had to replace all four, any experience with putting in a slightly"beefier" device? If so what?

6) Does the IC-2KL have a history of blowing these devices or was this one just unlucky or abused? (It doesn't appear that the prior owner let much of the magic smoke out of the AMP anywhere).

7) Anybody out there with a service manual willing to sell or loan me a copy?

8) Or just send me a copy of the "adjustment section" for resetting the bias and the protection circuits after I get the new transistor in.

9)The manual doesn't talk about switching times? Is this AMP QSK capable as it sits? if not is there a known set of mods for this as well?

10)Any other things I ought to be addressing in the way of service bulletins while I have the thing disemboweled on the bench?

Thanks in advance for reading this
Dave

Source record: 103517

For Sale - T-368 & R390A

The T-368 is in clean, good condition and works fine. Only problem is the left handle on power supply is damaged but can be repaired. It is on the original shock mount frame with casters installed.

The R390A I bought as a "Working" unit, but when I received it it was missing the antenna relay. Appears to be complete other than that.

I am located 45 miles north of Houston, TX at Lake Conroe. You need to provide for shipping or pickup if interested, I have no way to do this now.

I am asking $700.00 for both of them.

I also have the AN/GRC 26D COMO shelter they came out of, with the watt meter and antenna tuner if interested. It is designed to go on the back of a 2.5 ton military truck but fits well on a tandem axle trailer. Makes a good ham / field day / emergency shack. $1200.00 for this.

If interested reply to qru@juno.com or call 409-856-4573 & leave message, I am usually home after 6:00pm cst.

Regards

Larry Lowry

1322. Pacterm 98 Release 1.3 Update - Kudos

>but it isn't legal.
>

True. Interestingly enough, I bought a Yaesu FT-50 for my son last summer on the occasion of his passing his Tech license and also heading off to college. I bought it as a "demo" from a well-known radio store. When it came, I was helping him program it. I had him punch in the frequency of the local police department. I was trying to demonstrate to him that it would transmit only on authorized Amateur frequencies. Go ahead, I told him with the police frequency programmed in, press the PTT switch. Imagine my horror when the LED turned red indicating that the thing WOULD transmit on the cops' frequency, a MAJOR no-no.

This was right out of the box, on a "demo" radio. I swapped radios with him, giving him my UNMODIFIED FT-50 which was a couple of months old. He has been happy with it.

I now have an FT-50 which I am scrupulously careful not to program to receive anything other than an amateur frequency, for fear that I will violate the law otherwise. Imagine if I'd let him take the thing to college. I'm glad I was watching the operation of the radio when he first used it. The radio works just fine, but I've given up the "general-coverage" feature of it.

Oh, when I called the dealer, I got an argument from some smart-ass on the phone. We don't do illegal modifications on a radio in the store. Well, then, the radio must have left the store in order to have illegal mods? Yes, that must have been the case. Well, then, it's a USED radio, not a demo, right? What a ripoff.

I am going to "un-mod" the radio when I get around to it, but this is absurd. I am an advanced class amateur

and capable of doing mods, but what if this radio had wound up in the hands of some poor kid? There would be a lot of explaining to do.

Jim.

1324. Re: azden pcs-4000

Charles Hailbronner <hailbro@ibm.net> wrote:
> I was given an Azden PCS-4000 by a friend, and I need some advice.
> The mic intermitently works, can it be easily replaced?

I had a PCS-4000 for a number of years. Well, I still have it but
the processor chip went kah-kah.
The mic problem is probably due to broken wires in the mic cable
right at the front panel plug. Several times over the years I had
to tear that 'joint' apart and repair it.
Each time I put a more (and more) substantial strain relief at
the cable|plug junction.

> The problem Also the speaker (and external jack) doesn't work.

hmmmm... If it was _just_ the external jack, I would suspect the
jack itself. I've come upon a 'passle' of these lately in various
pieces of equip. that were bad. Mostly the make/break contacts used
for shutting off the internal component (speaker, battery, etc.) went
kah-kah.
In the PCS-4000 the internal speaker (mounted on the lower lid) is
connected to the board via an individual push-on connector. It
could be this has come loose and/or is broken.

> Would it be worth my while (or money) to have
> it repaired, or was I given a boatanchor?

It's a wee little thing to be a boatanchor -- maybe a door stop.
Hard to say without handling it myself. If you have a ham friend
nearby who is savvy with poking around inside something like this,
get his opinion first.
Another common problem found in the PCS-4000 (and other rice boxes)
is "no power out" which is usually due to a bad SAV-7 ($50) brick.
This is a fairly easy repair.

There are several "Azden Repair Specialist" that advertise in the
tiny print in QST.

Wide band transmit mod for the IC-706 MK II G requires removal of diode D.2030. Remove top cover to access main board. Locate IC chip 4052C-8713. Looking at the chip and reading the number from left to right, look just left of the chip to locate 11 solder pads running up and down. Diode D.2030 was the tenth diode from the top of the solder pads on (USA Version) radio. Remove diode. This modification opens up transmit on HF, VHF, and UHF bands.

>will sell me his car - for the price of the steel thats in it?

I'll sell it to you for the price of the steel, and the value added by all
the intricate machining work. It should be obvious that there is a lot
more to producing a car than the price of the raw materials. It should
also be obvious that there is very little value added beyond the cost
of the raw materials for a simple wire antenna such as this one.
If you cannot understand the difference, then you'll be a sucker all
of your life.

Date: 1999-07-19 00:00:00 UTC
From: Max Imo <reply@to.group>
Message-ID: <BRNk3.62$RU4.4157@news.corecomm.net>
Source record: 103342

Several back issues of QST had articles on constructing CW keyboards. MFJ has several models of them for sale. If you have a QRZ CD callbook you can find several programs you can use with a computer to send CW, including the CW learning program SuperMorse. You will also find ad's in CQ and QST from time to time advertising CW keyboard programs (Hartsell Electronics in Gadsden AL for one). I believe MFJ at one time sold a program called the Jersey City Keyer for sending CW with your computer. A cheap 8088 or higher computer works well with virtually all of those vintage programs.

Keith Lodahl <lodahlkh@internetwis.com> wrote in message
news:37938B63.97514896@internetwis.com...
I can understand the reasons to mod a radio to receive in out of band areas, and I can understand wanting to transmit in bands that are out of the norm, such as MARS and CAP. I can even understand the interest in some in having marine band etc. mods. But why would a ham want a radio to transmit on bands that are clearly not legal, or even desirable for ham use? I am seeking to understand. Thanks.
MIKEHAACK wrote:

While I can understand your amazement That It would transmit on a Police Freq,
I however wonder.
1) Was it Actually TRANSMITTING or Was just the PTT circuit led lit?

Several Radios will give and indication that their in TX when the PTT switch
is down, Yet are inhibited from emitting RF.
Which would get your local dealer off the hook so to speak.

2) It it NOT ILLEGAL for an individual to own a Rig capable of Transmitting on
a service outside of the radios class accepted range. Ie CAP, Marine or Police
.
The offense comes in knowingly using the radio on those frequencies.
And there are gray areas even then.

73 Mike

--
Keith Lodahl
Mayville, Wisconsin

No doubt that there are a lot of gray areas, but when it comes to saving a life I'd transmit on any frequency that I could. In fact, that's exactly what a friend of mine did. He watched a little boy get hit and run by a car and nobody had a cell phone. He called dispatch and gave the dispatcher all the information that they she asked for. The boy would have died had my friend not called on a frequency that he was not authorized to transmit on.

Like you said, there are a lot of gray areas.

I suggest forgetting about the original Heath specs since many people
have had the diode fail over time. When I fixed one for my Dad I just
used 1000V 3A unitssince they are inexpensive and easily obtained.

1350. Re: SM-220 +TS950SDX???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-19 00:00:00 UTC
From: mrauchle@aol.com
Message-ID: <19990719191611.28532.00000335@ng-cb1.aol.com>
Source record: 103346

Here you go:

First of all, make sure the SM-220 has a BS-8 in it. If it has the BS-5, it will not work with the 950. The following is the hookup procedure:

1 Connect "IF 1" phono jack on back of 950 to "IF" phono jack on back panel of SM-220

2 Connect "IF 2" phono jack on back of 950 to "V Input" BNC connector on FRONT panel of SM-220

3 Connect RF cables as specified in the 950 manual from the scope to the 950 and then your antenna, linear etc as necessary. You only need use the top two SO-239 jacks on the SM-220

4 Calibrate the band scope using calibration procedure in the SM-220 manual. Make sure "SPOT" (menu item 18) in the 950 is ON for this procedure.

If you need any further assistance, please do not hesitate to e-mail me.

For Sale:

Icom IC-756 transceiver HF + 6M

- Excellent condition, looks and works like new, 3xxx serial number, one year old, no mods.

- Manual, hand mic, power cable, box as original.

- Also includes optional service manual (never needed).

- $1475 including FedEx COD shipping.

- Send e-mail to jgskora@att.net if interested.

tnx & 73!

The Alinco DJ-11T is a small 2m HT 340mw output,3 aa batts. Looks exactly like their FRS radio.
The yaesu VX-1R will give her some bragginig rights though, AM broadcast, Fm broadcast, tv stations ,vhf-uhf, and if you mod it,FRS channels. Way cool! 200 bucks cheap.

Breakdown voltage and series ON resistance are two main issues at HF.

You can cascade several low-voltage PINS in series but you have the same problem as with power supply diodes: unequal division of the reverse breakdown voltage. THe MPN3700 has a breakdown of ~20 volts. There is a Siemens part (BAR64?) which is quite good at UHF (used for IMD reduction in emergency transponders).

"Best" has many different meanings. The MPN 3700 (made by Motorola) is a thru-hole device and will be around for quite some time.

"ESD sensitive" can be a misnomer. If it's that deep into the radio guts, it's unlikely to be burned from the outside world.

Greets,

I used to own an HR2510 (Made by Uniden I think). It was chipped/jumpered to allow it to talk on C.B. bands.

I am in need of finding another. If anyone out there has one for sale, or can point me in the direction of one, I would be greatly appreciative.

Thanks,

Mike

1383. Help w/Heath SB110A

Newsgroup: rec.radio.amateur.equipment

Source record: 103383

I have adopted an elderly SB110A (circa 1966); on CW when I transmit at power level much above 20 watts the VOX circuitry will not stay engaged (as in it will try to key, but sidetone is weak and it just goes to RX).

It is otherwise in pretty decent shape, and I'm sure I could puzzle this one out, but if this sounds familiar to someone and could save me from re-inventing the wheel, I'd be real grateful for a pointer in the right direction. PS it gives about 75W out; is this typical?

> Does anyone have any suggestions?
>
> Mel
[...]

I attached my scope's vertical input to the center conductor of my feedline through a 47k 2 watt resistor in series with a small variable capacitor of, if I remember correctly, about 30 pF when fully meshed. That seems to give me enough voltage, with a little adjustment of the scope's attenuator, to view the waveform well whether at 100 Watts or 1,000 Watts PEP output, and on all HF bands.

Seeing the transmitted wave envelope on an oscilloscope is invaluable. You can see, in an instant, if there is flat-topping or overmodulation. I never transmit without one.

For received signal waveforms, I tap off of the last IF stage of my TS-440S (which is 455 kHz) with a 25 pF capacitor directly into the scope. Be aware that the waveshape of the received signal at the IF is very much affected by the receiver's filters. Mine only begins to approximate the real appearance of the transmitted waveform when I switch to my (customized) 15 kHz bandwidth.

I have the transmit envelope signal on the scope's "A" input, and the IF input on "B" -- I can switch between the two, or on my scope (a B&K) view both simultaneously.

Of course, I am sure there are other and better ways of doing the same thing -- but my way was simple and inexpensive.

With all good wishes,

Kevin, WB4AIO.

My understanding is that corrosion of some of the caps and resistors can occur also. Those that look bad or have corrosion problems would be replaced. Also the PC traces should be checked. I agree that physical stability is required for mobile use so perhaps the potting is not necessary for fixed use. Maybe you can get some more feedback on this subject.

Per the May,June,July Southeastern Repeater Journal, there is a hamfest October 23 in Chattanooga, and one August 29 in Cedars of Lebanon TN (I don't know where that is).

You may want to look at www.sera.org. I have never visited the site, but I have been a member of the Southeastern Repeater Assoc. the 10 years I have been a ham. They have a quarterly magazine for like $8/yr which has some local news type articles, updated repeater lists (ga/ky/ms/nc/sc/tn/va/wv), and a hamfest calendar.

Yes, that's how it looks. I used a small minibox with two SO-239s
for the RF pass-through and a BNC connector for the sample output.

I'd keep the lead from the center conductor to the resistor as short
as possible, to minimize any impedance-change effects.

Hi Chris. Several people have made good suggestions. :) You might also want
to check out the Elecraft K2. It puts out 10W CW and has the option for
SSB if you want to later move to that mode. :) In addition it's also a kit
so it'll help keep costs down, but gives you a large number of modern
options. Take a look at it.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone * (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. If you wish to
purchase a new receiver with "Plectron-like" signaling
capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

I too have a HK 'SB-614' without manual or schematic. Mine is working, but
I would like to increase vert sensitivity. I tend to run under 50 watts on
ten meters with my Drake TR-4. Any info on how to increase vert sensitivity
or sell me the manuals would be of help.

1406. Info using HT-33a amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-19 00:00:00 UTC
From: Tim <tvendt@kear.tds.net>
Message-ID: <01bed1f1$1c5971e0$789347cc@default>
Source record: 103406
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Greetings.... I am wondering if anyone has any words of wisdom using an HT-33a amp with modern solidstate transcievers and how you hooked it up... I have had one for several years that a friend gave to me that had a bad bias,filament,etc transformer when he gave it to me. One can be had from peter dahl for less than $100. what has your experiences been with it and is it worth keeping around and using....should I strip it and use it for parts for a more "modern" design amp? I am assuming of course that the rest of the amp is ok. High voltage is right up there and all and everything else seems to be ok, even the tube (PL-172). Any info would be appreciated.

Thanks

I sent a Kenwood, probably to the same Kenwood repair facility, with a detailed note. Authorized up to $100 on a credit card and asked that they call me if more.

I heard nothing after about a month and called only to be told that I hadn't responded when they called a couple of weeks earlier. I told them NOBODY CALLED. I was told the repair cost which was over $100 and authorized it on a credit card. The implication was that the REPAIR WAS ALREADY COMPLETED as they told me what "had been replaced." The "manager" I was transferred to said that he was "getting around to calling"...I suspect nobody bothered!

A week later I received the rig back UPS COD for MORE THAN I WAS TOLD THE COST WOULD BE and shipped 4 days AFTER I TALKED WITH THEM!

Go figure! I guess they really don't much care about customer service in this age of throw away items.

The rig had been repaired for the same problem a couple of years ago with no parts replaced and only adjustments made. This time parts were replaced. Let's hope this time it continues to work.

For Sale: Immaculate Yaseu FT-736R VHF/UHF all-mode fixed station transceiver. Purchased new by me and has less than 100 hours total use. There is not a single scratch, smudge or blemish on it. It is still like brand new and has always been in a non-smoking environment.

This 736R has the optional Subaudible Tone Squelch (FTS-8), Electronic Keyer Unit, DC Power Cable. I have the original box, operating manual, service manual and hand mic.

Price: $1125.

>much of the magic smoke out of the AMP anywhere).

Nope so long as the protection circuit is working the 2KL works fine
and does not eat finals

>7) Anybody out there with a service manual willing to sell or loan me a
>copy?

Icom never printed a service manual for the 2KL

>8) Or just send me a copy of the "adjustment section" for resetting the

I no longer have the HT33 (the older version), but I used it for many
years with good result, exciting it with a Drake TR7.

The HT33 doesn't have a T/R relay, or built in bypass, so you'll need
to add some DowKey relays, or other coax switches.

The PL172's are fairly rare, but can be obtained if you don't mind
paying the price for them. They tolerate 100 watts drive well and will
provide legal limit + output.

If you have minimal cost in this amp, it's definitely worth using!
Also, it is something of a collectable, so even if you sold it, you
could easily recover your repair costs.

Finally, I believe the manual is evailable electronically on one of
the archive sites.

Good luck!

On or about 4-02-99 I sent $28.00 to R.Long AKA "dragon" or drgn@antigopro.net and address N11310 East Shore Rd. Pearson,WI.54462 After not receiving what I paid for (an original manual for a Tram D201) I contacted mr. Long via email several times.At first he said he sent it to the wrong address (he emailed me back and had the wrong zip code on it).He ask me to wait to get it back....after 2-3 more weeks of waiting I again contacted him via email and he told me he would send me my $28.00 back. After that never happened I contacted the post office and started a mail fraud case on him.I paid with a postal that he has cashed. Now after 3 mo. and not receiving my money or the manual I figure I will ask the rest of you to watch out for mr.R.Long.Ad if you have been burned by him to contact your local postal inspector and ad your case to "his" file.Maybe we can get our money back or at lest make him pay with a fine or jail time. If anyone has a good phone # or place of work,etc.on mr.Long I would like to have that info. I would like to tell his boss,wife,boyfriend,kids,disability worker,etc.about him being a thief.

Take care,
Stan Clewett (530)241-0843

Stan and CB newsgroup,

I too have had a rather unpleasant experience with this individual !!! I see Rob is using a new Email address!!

Several months back, he advertised some 8950 tubes for sale at a reasonable price.
I contacted him and sent him the money. After about 2 months of me trying to contact him via Email and snail mail, I sent him a registered letter informing him that I will pursue legal actions against him. Lo and behold he finally sent me the tubes (which were very poorly packed and very lucky they didn't break!)!!

Stan, if I were you, I would contact the District Attorney, the County Prosecutor, and the
Postal Inspector involved. I would be careful about contacting his personal circle of contacts, which would jeopardize you to legal matters concerning Defamation of Character! (God Forbid).

What Mr.Long is committing, is indeed mail fraud which is a "FELONY" READ THAT ROB! FELONY!!!! I'm sure BUBBA is just waiting for you!!

So, yes, for the rest of you, DO NOT DEAL WITH ROB LONG !!

BB Wolf out.

DO NOT DEAL WITH ROB LONG (a.k.a. drgn@antigopro.net) !!!!

You will subject your self to much grief if you do !!

He has a very bad reputation of trying and succeeding in Ripping folks of
here on the newsgroups!!

He is from Pearson, Wisconsin.

Yes, the Postal Inspector does have actions pending on Mr.LONG.

David,
Some additional followup to my other message.
Found that with the VX5 and its first IF frequency of 47.25Mhz, there may be some mixing of signals in your area.
In the Houston area we have TV channel 11 video on 199.250 Mhz. and pager transmitters around 152 Mhz. This will get into the receiver front end of the VX5 and mix together causing wideband output on 47.250 Mhz the IF. In your area there may be other frequencies that are mixing together and making a wideband output on the IF frequency.
Also, it appears some VX5's are better than others at rejecting this mixing problem. I tried a new VX5 (s/n- 9H1) and it was much better than mine. But the question is will it be enough better to make the VHF/2 meter range useable in my area? Hope Yaesu will find a solution for this. Hope you get yours ironed out.

I am looking for a reliable, honest and customer service oriented Amateur Radio retailer.

I would appreciate Company names and the names of individual sales persons who will not treat me as just a number.

I have spent thousands of dollars on gear, yet, I still feel that the perception by my salesperson is that he/she is doing me a big favor by fixing a problem...such as replacing a BRAND NEW but defective rig with a new one....

Life is too short for:

1. QRP.
2. Ham Radio Dealers who have gotten too big to provide decent service.

Thanks for your help.

Dale
Ham Radio Outlet
Anaheim, California
Fax = 714-533-9485
Direct line = 714-533-7373

Due to the manner in which HRO's toll-free numbers are set up, you might
not get Dale's location when you dial their 1-800 number.

> I would appreciate Company names and the names of individual sales
> persons who will not treat me as just a number.

Just use common sense, of course. For example, I would not call my
favorite Amateur radio dealer to shoot the bull on a Saturday. Nor would
I call with questions five minutes before closing on any day.

Source record: 103477

While I can understand your amazement That It would transmit on a Police Freq,
I however wonder.

1) Was it Actually TRANSMITTING or Was just the PTT circuit led lit?

Several Radios will give and indication that their in TX when the PTT switch
is down, Yet are inhibited from emitting RF.
Which would get your local dealer off the hook so to speak.

2) It it NOT ILLEGAL for an individual to own a Rig capable of Transmitting on
a service outside of the radios class accepted range. Ie CAP, Marine or Police
.
The offense comes in knowingly using the radio on those frequencies.
And there are gray areas even then.

Hello, I have the following transformer literature that is out of print,
and very hard to find. They have a great wealth of often needed
information, and identification. These are very high resolution LASER
monochrome reprints of the originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices are firm, and
INCLUDE POSTAGE, in the continental USA. Others by rate.

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"
price update for Dec. 6, 1946.Another excellently illustrated info
source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951
25 pages crammed full of information IN DEPTH! Has everything you
ever wanted or needed to know about running these tubes, a real
nicely illustrated easy to understand manual, Price 10.00

Thanks for reading, if you need to order,
Please respond to my mailbox...
Thanks, Joe Pratt,

The 520SE was my very first radio back in 79. Its a great rig with many features found in todays more modern rigs. I think you'll be very happy with it. Put up a simple dipole and run RG8X coax, if you can't get RG8, and it will work great. Get on 15 and you'll work DX without any trouble. I made numerous DX contacts on CW with that radio.

Have fun and 73,
K-K

1441. FS: ### MOTOROLA SABER II R - VHF Secure

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-20 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <19990720154228.05676.00000292@ng-ch1.aol.com>
Source record: 103234

For Sale: Motorola Saber II Ruggedized, VHF, Secure capable

Model #- H99QX059H
Factory ID - H43QXJ7139CN

120 channels
6 watt output
136-174Mhz
Built-in Scanning, Selectable PL, plus many other programmable options!
CTCSS/DCS/PL/MDC600/MDC1200 capable
Brand new battery & Antenna
Radio comes programmed to your specs

For those not familiar, this radio has an alpha display, and has 10 zones, each with 12 channels. Radio is in excellent shape (8 out of 10 cosmetically). Only a few small scratches on the case, but is in 100% working condition...

This radio is worth almost $2000!!! Looking for reasonable offers...

Please email PDFDISP@aol.com with any questions. Picture available via email on request. Good luck, and thanks for looking!

The fastest-available sweep time is a reasonable first-order approximation for a lot of scopes, but it's not guaranteed to be reliable. There are two ways to get a better idea of your bandwidth. One is to borrow a calibrated, levelled RF generator and see where the observed vertical deflection falls off by a factor of 0.707X (= 3 dB bandwidth).

The other would involve the use of a good low-frequency square-wave or repetitive-pulse source with a rise time that you know is significantly faster than the scope. The observed 10%-90% rise time on the scope can be turned into a good bandwidth approximation with the equation BW in MHz ~= 0.35 / observed risetime in seconds.

I concur. I had exactly the same thing happen to my FT-8000R. Assuming that
the '8100 is built the same way, one could expect the same problem to happen
to it as well. The volume/squelch pots are mounted on a right angled pc board
and as I remember, there are several connections made to the main pc board
on each side of this right angled assembly. These connections physically come
loose, and electrical contact becomes intermittent, and wallah, you lose control

of the radio. Only the mic can change bands, and volume/squelch only will
change as you press "downward" on the volume/squelch knob, forcing a psuedo
electrical connection. Once these connections are soldered, the problem goes
away. It happened to me, and I fixed it myself with just a little trouble.
Takes
dissambling the control head, but that's where the problem is & has to be fixed.

I like Tom's idea of a wire. Here's another choice.
On this section there is an AEA isoloop for sale for $ 150
I have one and would reccomend you also purchase one
of the MFJ 259 antenna analyzers one of which is also for
sale here. I also have an analyzer. No I'm not selling mine.
The isoloop is fine and the analyzer makes tuning it a snap.
I suspect tuning one without the analyzer will cause you
to talk to yourself, for a couple of reasons... BOBBY

Source record: 103256

Hi I am trying to hook up a AT 130 for a friend on his sailboat. Unfortunately he does not have a Icom radio. He has a Yaesu. I have hooked power to the tuner and the coax from the radio. I have hooked a 30ft wire antenna to the tuner and used several radials and a thruhull for tuner ground. Is there any thing else I need to do to make this turner work? What position position should S-1 be in "Preset" "Normal" or "off"? do I need to hook something to the start terminal?

Any help would be appreciated

1466. Re: QST: FT-100 vs. IC-706MkIIG

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-20 00:00:00 UTC
From: "James C. Garland" <4cx250b@miavx1.muohio.edu>
Message-ID: <379519EE.D1E693B0@miavx1.muohio.edu>
Source record: 103259

Here's a personal experience with an FT-100, which I installed in my Chrysler Concorde about three months ago, along with the ATAS-100 antenna. I also owned one of the original Icom 706s a couple of years ago.

My big complaint with the IC-706 was that the receiver completely collapsed under strong signals. The FT-100 is MUCH better in handling strong signals and in immunity to overload. This fact is confirmed by the QST reviews, if you inspect the technical specs for 3rd order intercept point and dynamic range.

I also have been very impressed with the ATAS-100. I don't have anything to compare it with, but I have easily worked into Europe on 20m and 15m ssb. My big gripe about the ATAS-100 was that it could only be tuned within the amateur bands, because it takes RF to tune it and the FT-100 locks out at the band edges. The extended TX mod in the QRZ.COM "mod" section solved that problem, however. The mod takes just a couple of minutes and makes it possible to tune the ATAS-100 on any frequency from 7 MHz up. It's really nice for monitoring shortwave broadcast stations, now, while on the road, and the convenience can't be beat.

On balance, I'm very impressed with the FT-100 and haven't had any problem with it. I do agree with the reviewer in QST, however, who said that the remote kit is more complicated to use than for the IC-706. Still, it's not much of a bother to install the remote panel kit. I also agree with the reviewer, who noted that the DSP notch filter isn't very effective -- about 20 db is all the notch I get. However, on the plus side, the noise blanker is incrediblly good, and the DSP filter works great in the noise reduction and tunable filter modes.

73,

Jim W8ZR

1468. Standard Amateur Radio in business???

Date: 1999-07-20 00:00:00 UTC
From: gworth@ibm.net
Message-ID: <37954E79.4A577983@ibm.net>
Source record: 103261

Gentlemen,
My friend has a Standard C5718 that is in need of repair. It stays keyed at all times. It is under warranty, but Standard Radio in Illinois does not answer their phone or e-mails that he sends. He is using the numbers on the web page. Even the service person in Michigan does not answer his phone or have the answering machine on-line any longer. I suggested calling Marantz-Japan, where the radio was manufactured. I find it hard to believe that Standard would just close up amateur radio division operations in the US and Canada and walk away, never to be heard from again...but anything is possible. Does anyone have any idea as to how to obtain warranty service on Standard products? Has anyone successfully contacted them at the Illinois number, or the Michigan service number in the last week or so?? As I said, the numbers on the web pages do not get answered. Thanks for any information.
George

You can do a soft mod to some register setting which will clamp the L1 power setting to 0 watts. While this means that you lose the L1 setting for transmitting at low power, it could be useful in your situation. If you want to program in police frequencies to listen to, you could make this mod and then store those channels with the L1 power setting. You will be protected from transmitting.

If you're interested, I can dig it up and post it here - unless someone beats me to it.

Source record: 103263

Try placing it in a plastic bag with a dryer sheet. Preferably one that is nicely scented. Leave it there for a number of days. The dryer sheet should pull the odor out of the cabling. This is a trick used by car dealers to "freshen up' that used car you want to buy. Let me know how well this works.

I'm curious to understand the spirit of this regulation. I understand in general terms the value of type acceptance. Placing the letter of the law aside for a moment, would I be doing anyone any real harm in using a modified HT on marine frequencies? Put another way, is there anything about a modified ham radio on marine frequencies that is known to be non-type-acceptable? Or is it just that acceptance hasn't been sought? If it's type accepted for MARS/CAP, then why can't they get it accepted for marine?

In general, tge USCG wants as many people out there with marine radios as possible.

1474. Want to trade Computers for misc ham stuff.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-20 00:00:00 UTC
From: James Greer <jagreer@earthlink.net>
Message-ID: <7n39hd$5f0$1@fir.prod.itd.earthlink.net>
Source record: 103267

I need a dummy load, low pass filter, SWR meter, antenna tuner, coax etc.

I am trying to set up an HF station so I need a little of everything. I have the following for trade.

Apple IIGS 1.25 meg color monitor several disks plus lots of software. Works and a GOOD keyboard (the weak point).

Apple IIGS 8 meg 20 meg HD color monitor plus lots of software and also a GOOD keyboard. ("WOZ machine")

Both have system savers and are cosmetically nice. All cables etc. Software is generally original and no longer available. Word processors games graphics included.

Macintosh Performa 200 with a 20 or 40 meg HD and a bunch of software. Looks like a "classic" mac. Nice keyboard about as powerful as the SE etc.

I am looking for Ham stuff to get a station up and running. Coax, antennas, or miscellaneous would be considered.
Jim

From: Joe Bagodonuts <dogworks@pobox.com>
Message-ID: <932527535.031.54@news.remarQ.com>
Source record: 103272

Has anyone tried one of the new Radio Shack compact 2m
transceivers, which use 2 AA batteries for power?

It's a general coverage receiver, and a 2m transmitter.
It is really tiny.

Anyone know who manufacturers it, or any other info?

Thanks.

I don't recall the tune up procedure well. Basically you dip the plate current and increase the loading until it is a small dip (as I remember).

My best recollection is that the fan ALWAYS ran on mine.

YOu can likely order a manual from Kenwood. I may have a copy left around here (but not sure).

I had seen some posts here a while back about the "infamous" fuel pump noise in Ford trucks. I am having one installed on my truck at the dealer's expense but I am curious if anyone else around here has had this filter installed on their truck or SUV and if the filter actually works to reduce the fuel pump noise.

Message-ID: <3793e8dd.173536294@news.goodnet.com>
Source record: 103289

My new hamshack, that came with the house we just purchased, has track lights and a high ceiling. The lamps are worthless for good lighting, and the six floods overheat the room. I would like to use something that puts out less heat and more light. I know that fluorescents are usually bad news around radio equipment. Are there newer types that don't create so much noise in receivers? Any other ideas for good lighting without a lot of heat? I know I can use individual desk lamps, but I want to light up the room.

From: OMK <omk4@mindspring.com>
Message-ID: <7n13q7$hg9$1@nntp3.atl.mindspring.net>
Source record: 103294

Hello ,,, I am new with amateur radio , I always wanted a small HT
Like the VX5R for size specs, and power, Until Icom came with the T81A that
has more bands. I was confused didn't know what to buy
when I decided to buy one the VX5r was sold out and that;s when I bought the
T81A. Now I don't know what do I have? Did I make the right choice or not ,
somebody told me the VX5R has better specs.
Is that true? what do you think please give me a professional advice.
email me for the answer and if I can make more out of what I have
mods,,,etc.... and the VX5R as well.
Thanks
OMK.

You can spend your whole life wishing you had more, bought something different, and worrying about making mods. Making mods may well make the rig worth less when/if you decide to sell it. I don't want to buy a rig that some unknown person has been mucking around in if I can help it. I got bit several years ago on an HT that had been modified and when it stopped working and I opened it appeared as though a beginning solderer with poor eyesight and a 150 watt soldering gun had been in it. They did such a poor job that a cable they'd messed with and resoldered broke loose with normal use.

If the HT does what you need it to do and works well why not be happy with it and get on with your life?

It's like computers or cars. Once you buy it, it's depreciated. If it's a computer it'll be worth nearly $0.00 in 2 to 3 years and if it's a car it'll be worth 20% less after you drive it around the block and you'll be awed by the shiny new models in a few months and wish you'd bought something else.

Don't worry about what others think! This is not a race to keep up with other hams and the person who dies with the most rigs is going to be no more happy than the other dead stiff next to him/her in the mortuary!

* Does it work for what you bought it?
* Did you pay a fair/going price for it?

IF SO, enjoy it and use it. IF, NOT, you should have done more research before buying it!

> 1) Was it Actually TRANSMITTING or Was just the PTT circuit led lit? =

Yeah, you were transmitting. If you try to transmit outside the transmit
frequency limits on an FT-50, the frequency display changes to "ERROR"
and the red LED does *not* come on. If you didn't get the error display
and did get a red LED, the transmitter was keyed.

> Several Radios will give and indication that their in TX when the =
>PTT switch=20
> is down, Yet are inhibited from emitting RF.=20
> Which would get your local dealer off the hook so to speak.=20

Not with the FT-50.

> The offense comes in knowingly using the radio on those =
>frequencies.=20
> And there are gray areas even then.=20

Well, use in a true emergency is probably legal.

Hi there! :) I am looking for the following musical equipment, working or broken, in any condition:

-OLD SYNTHESIZERS (knobs & sliders pref but unnecessary)
-OLD KEYBOARDS (1960's-mid 1980's)
-OLD DRUM MACHINES (Roland TR-909, TR-808, TR-606, etc)
-OLD ANALOG SEQUENCERS (with knobs for each step)
-OLD MIDI gear (rackmount synthesizer modules)
-OLD VOCODER (robot-voice effect)
-MODULAR PATCHABLE SYNTHs (ARP 2600, EML-101, System 100m, MS20, etc)
-OLD EFFECTS (filters, ring mods, phasers, delays, etc)
-Roland TB-303 Bassline

MOOG, ARP, Sequential, Oberheim, Roland, Korg, EML, EMS, Buchla, Serge, Synton, Digisound, Voyetra, Steiner-Parker, Octave-Plateau, Gleeman, Paia, PPG, Aries, ANYTHING SIMILAR, especially more unusual stuff.

For a better idea of what I'm looking form please go to:
http://members.aol.com/rolandman1

Please email me privately at rolandman1@aol.com if youve got anything like the above or know someone who might. Please be sure to include price and condition. Thanks in advance, sorry if this message disturbs anyone.

I just depends on what your needs are. I used to own an Icom Q7A, then
the VX5 came out and I just had to have it. Well I sold the Icom,
bought the Yaesu and was very dissappointed. I wanted the HT for its
RX capability, particularly RX from 225-400 mhz AM. The VX5 is useless
there, as was the FT-50 I had before. The Icom is awesome there.
So I sold the VX5 and got another Q7A.

Do a little research and decide what you really want.

It all depends on your needs. I have owned an FT-50, a VX5 and an Icom Q7A. All of them are now gone except the Q7A. The Yaesu rigs dont have any where near the receiver the Icom does, and thats what I wanted. I use it as a scanner/receiver, and listen mainly th VHF public service, VHF air and UHF military air comms. The Icom really shines here. I only make maybe one ham contact a month, but I use a 44o repeater 28 miles away in a link system that gives me about 250 miles of coverage. Different rigs fit different needs. Just examine what you need and at least one of the rigs will be right for you.

You could own your own radio station. Have you ever been on the AIR
before maybe in college. You can meet a lot of people, promote new bands,
play music or talk about news.

The house is nice too. It has a large living room. The picture window
gives a panoranmic view that is breath taking. There are many outdoor
activities close by. It's 20 miles from a vary popular state park.

Radio Station:

FCC Licence (none commercial)
WSPE 88.3 FM
85 foot steel radio tower
Transmitter
Control Panel
Microphone

House Description:

Two story modern house as shown in the picture above.
Situated in the woods with a window view that overlooking several mountains.
Mature 20 acres hardwood forest hilltop (250 feet).

For more information:

For sale, in excellent condition, FT-900AT with the ssb Collins filter and
the factory built-in automatic antenna tuner. Also included are: the
separation kit, mobile bracket, manuals and box.
The tranceiver serial number is 4J060153.

The price is US$750.00 plus shipping.

Dennis.

1523. Reducing power on TS-140S.... How?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-20 00:00:00 UTC
From: Boatanchor Bob NA4G <na4g@weedcon2.cropsci.ncsu.edu>
Message-ID: <7n29am$45t$1@uni00nw.unity.ncsu.edu>
Source record: 103319

I want to reduce the power output maximum on a Kenwood TS-140S from 50-100 watts down to 10-20 watts. Using the power control slidepot is a joke. It is either all on or all off. The owners manual does not cover anything in this regard, except for adjustment of the data level pot behind the front panel. Unfortunately, that did nothing to reduce CW output.

If it is possible to reduce CW output down to 10-20 watts max, how is this done, and with which potentiomenter(s) on the signal board (or elsewhere)?

Thanks!

Bob Keys

Hi - I also run a TS520 (but the older version, without the 'S') and find
it to be a fine, economical way to run HF. I'm told the receiver sensitivity
is fine (although that's not something I'm in a position to test) and always
get fine reports about my audio quality. it's a competent radio. Now as for
the antenna, you can't get much cheaper than a dipole. Feed it with ladder
line and an antenna tuner for best results.

Good luck, and hope to hear you on the HF bands -

Greetings,

I have seen scopes without a MHz rating on the front. The 5ns per division scopes are depicted as 200 MHz scopes. How fast is my .1us scope? I have an O'scope built into my test set, rated at .1us per division on its fastest horiz sweep.

If I "assume" the 5ns is a 200 MHz scope, then my .1us will be:

5ns/200Mhz = 100ns/xMHz

Is this a 40MHz scope? Or, is my math wrong, and I have a 4MHz utility "audio" scope only?

How fast is a .1us per division scope?

Thanks,

Al, NW2M mailto:nw2m@qsl.net

Okay friends, see what you can come up with for this situation:

Condo + Homeowners Association = no outside antennas. Therefore I'm limited to the attic. Not a big deal for VHF and UHF, but I'm getting a Yaesu FT-900 and am ready to go on the air. What the heck can I do for an antenna in the attic?! Here are the dimensions of the attic:

The base is 36ft by 26ft square. Then two sides angle up forming an isoceles triangle with the apex being 82" above the base (slightly less than 7ft). This 82" apex runs paralell to the 26ft sides of the base. Get the picture? What are some suggestions? I welcome them all! Thank you!

Mosely makes a great tri-band beam for attic use or any cramped quarters
situation. It is called the Mosely Mini-33. It is a 3 element tri bander
(10-15-20) on a 6ft boom. The longest element is 16ft 9 inches and the
turning radius is only 10ft.
It compares pretty well with their full size beams all things considered.
Here is the link to the page with the Mini-33 info

http://www.mosley-electronics.com/amateur.htm

Good luck.....

When I use it as a vfo, I do that, by swamping across a 50 ohm load.
That works fine when I want 100mw to drive my SRT-14. But, when I
want to use it as a stand along rig with the locals (all within
a couple of miles), it is way overkill. There should be some sort
of internal drive/final-bias/something control that limits the
output. I would like to find that and crank it down to the required
level, when full power is set on the front panel slidepot control.
Any ideas as to how to do that?

Thanks

Bob/NA4G

QRO should only be to the level needed to establish reliable communications.

> The [attic] base is 36ft by 26ft square.

1. Just the right size for a horizontal 40 meter loop. You can nest
20-10 meter loops inside.
2. The small tuned loop antennas (hula-hoops) work pretty well but are
kind of pricey.
3. The kind of compact antenna that looks like a bird feeder (Isopole?)
also works pretty well, but they are monoband.
4. Your attic is plenty long for 20 - 10 meter dipoles.

If it was me, I'd put up a multiband dipole for 20-10, and an Isopole (?
if that's the right name, the bird feeder) for 40. If you wanted to you
could even run a 40 meter dipole along the 43 foot diagonal; just bend
the last 12 feet or so on each end along the 24 foot wall making a kind
of "Z" shape. Not ideal, but it will work ok. Best of luck.

I know that you asked about attic antennas but when I was in your situation I put up wire antennas outside by using something like 26 gauge wire. If you are more than a few feet away it is virtually invisible. It breaks easily so it needs to be suspended between two solid objects, like two buildings, not a tree that will sway in the breeze. I once had an apartment on the third floor and kept a wire dipole up for two years without anyone knowing.

Good luck,
Tom

For Sale -- Icom IC-2AT 2m HT with PL and Speaker/Mic

Includes the following:
- DTMF (touch tone pad)
- MARS/CAP enabled
- Original manual and schematics
- Communications Specialists SS-32M internal CTCSS (PL) tone encoder set to 107.2Hz (1B)
- Icom IC-HM9 Speaker/Mic
- Periphex BP-BH heavy-duty AA alkaline/NICAD battery pack with charge jack and 8-800maH NICADs (charge with any 12v DC supply -- will include banana plug charge cable)
- Original Icom rubber duck antenna, 10" flexible whip/duck, stubby duck, and VoCom telescopic 5/8 wave antennas
- Icom IC-BP3 and IC-CM3 battery packs (8.4v/250maH batteries) -- both need their NICADs replaced as they only hold a charge for a day or so.
- Original Icom BC-25U 15 hour wall charger for IC-BP3/CM3 batteries

The HT and accessories are in excellent condition - asking $115.00 for the package. Will ship ground UPS (insured) in the continental US. Payment in advance with cashier's/bank-check/money-order via US mail.

If interested please email Michael J. Linden, N9BDF, at mjlinden@mcs.net

I have a 4000 my self I suggest that you look at the mick cable as this will cause a varity of problems when it goes bad. I replaces mine with a simple 4 conductor cable and generic hand mick as well as replacing the multipin plug and socket. If there is a volume control on the mick Iseem to remember that there was then then a bad wire to it may May also be you audio problem better to buy pass all that junk and just use the frount panel controls. One word of warning the PTT line comes directly from the proscessor and will introduce noise in to the mick unless shielded from the mick lead or isolated by relay (what I did). dr.d -- Kiss Technologys The more complicated the plumbing the easer it is to stop up the pipes M. This seems like an extremely simple question, but so far the answer has eluded me. Does the Icom IC-R2 have a received signal strength meter like its transceiver brother, the IC-Q7? One of the things I'd like to use the R2 for is radio direction finding, and the lack of a meter would make it relatively useless for that.

Icom's own brochures show the signal strength meter on the Q7 but not on the R2. I've done a web search, and have found multiple pictures of the R2, but they seem to be copies of just two original sources. One is the Icom picture, which doesn't show the meter. The other seems to be a doctored Q7 picture, since it shows the RX/TX LED to the left of the LCD display where the R2 has nothing, as well as different labels on the buttons. And the local amateur radio dealers don't have any R2s in stock.

So, for someone who owns an R2: does it have a signal meter?

Legal? Does the transmission cross state lines? I think a cruise thru
Title 18 USCFR will reveal a limitation of FCC powers to interstate only;
not intrastate. Also a review of Supreme Court decisions on the subject
where FCC jurisdiction was challenged under title 18 may reveal where some
states/burgs still have outstanding warrants against FCC agents trying to
act in areas where they had no jurisdiction.

The legality question is usually a matter of whether or not revenue is lost
by an action taken by a citizen in which a regulation that requires ante is
bypassed. If you follow that line of reasoning, you will soon be able to
quickly sort through the "legality " issues associated with "type
acceptance", "modifications", "800 Mhz Privacy issues", yaada, yaada,
yaada.............Follow the money.........................

I like a good conversation as well as the next fellow.............

The vertical risetime of a 10 MHz scope is 35ns.
So the vertical amp risetime of a 100MHz scope is 3.5ns.

I have this radio, see, and I don't use it anymoe, see, and I wonder what it is worth in today's market. Do you have any idea??

TS-430s with all possible upgrades, service manual, Dedicated power supply (PS-430) Speaker (SP-430) and Microphone MC-60.

Just to add to the package, I have a Vectronics antenna tuner model VC300DLP, a nice, clean Ameritron RCS-8V remote coax switch system. AND seveal hundred feet of RG8.

Everything is clean and work perfectly.

So what do you think?

Source record: 103095

A fellow recently gave me an old scanner that didn't work and I rehabilitated it, but I need some information on the care and feeding of NiCds. I used some old ones I had laying around that didn't have too much use on them and now I am in the process of running them down and charging them a few times. Trouble is the scanner (Realistic Pro-34) has its own charging circuit I don't fully understand. I have an AC adapter that is selectable 3v-12v and says 300mA, but I don't know what the output is at 9v, and a car adapter rated at 900mA at 9v. The online manuals call for adapters that both seem to be 300mA at 9v. 900mA seems to be too much unless the radio has a good charge circuit in it, or a rather limited current to the batteries. Does anyone have a schematic of the charging board they would be willing to scan and send me?

Also, I was debating the use of a set of AA NiMHs in the radio, my question being, would they do OK on the same trickle charge of the NiCds? Later I plan to wire in a circuit for fast charging with a MAX713.

Thanks,
Birken

I recently bought a used Icom 275H 2 meter rig--not from the
original owner. I know that the guy I bought it from is not a smoker,
but evidently whoever sold it to him must have been a chain smoker. He
must have smoked 10 butts at the same time. The radio itself doesn't
smell to much, and the microphone head is OK also (how, I don't know),
but the mic rubber coil cord R E E K S !!!!! It stunk up my shack so
bad that I put it in my shed. I've tried everything, but after a few
days, it stinks again. Does anybody know what I can use to fumigate
the cord permanently ??? I CAN'T TAKE THE STINK !!!!

Does anyone know the size of the FT-2600M? I have looked in every magazine, the Yaesu site, and many catalogs and none of these give me measurments.

I like the features (front mount speaker!!!) and price of this rig, but I'm not sure it will fit into the small space avalible in my car. So, if anyone knows where I can get the sizes or if someone has one and can just measure it...that would be great! Also, if anyone has any comments about this rig feel free to share them with me. Thanks!!!

Message-ID: <4abl3.1188$rK2.42743@iad-read.news.verio.net>
Source record: 103141

Hello. I have a Samlex 1223 23A Continuous/25A Surge 13.8V power supply for sale at $105 shipped UPS Ground/insured. This P/S is incredibly compact and perfect for base operation. Second to none for portable operation (an excellent choice for Field Day).

I have used it in several HF Worldwide Contests for 10's of hours at a time with no problems. It runs incredibly quiet and produces NO interference in the receiver of my HF rig (I've also heard that it won't interfere with the radio on VHF/UHF either).

Comes with AC power cord, original manual, and original box. It works 100% and it's looks are around 85%. Only about 1 year old. Let me know if you have any questions or if your interested in buying. Thanks for reading!

>
>Any help would be appreciated
>
>Bob McMillan
>WB5RYR

Not going to work with the Yaesu. The AT-130 needs a start pulse from the radio, it is not simply an RF tuned tuner like the SGC.

The start pulse is a low, less than 1 volt, at 200 millisecond duration. One that happens the tuner pulls the PTT line low and the radio outputs 10 watts into the tuner. The microprocessor then samples the RF reflected and tries various combinations until it tunes to a respectable SWR. The RF is feed into an internal dummy load in the tuner which a sampling of the RF is used for the tuning process.

Other brand tuners will present the whole SWR value to the radio. This will many times cause the radio to fold back in output power and causing the other brands not to tune properly.

Unless you can make up a little pulse circuit for the tuner, you may need to look elsewhere for a proper tuner with the Yaesu.

The pulse circuit can be a simple push button which you use to take the start line low for an instant.

Leave the toggle switch in the center position, you do not need to do preset tuning.

The radio must be at 10 watts and in some continuous wave mode ie: AM, FM, CW, RTTY just so long as it does transmit a carrier in that mode at the time you press the " start " button . If the PTT requires a ground then the AT-130 will likely handle that, so connect the PTT line from the tuner to the radio if you know the PTT is a low going PTT. The tuner will hold the radio in transmit for up to 8 seconds to find a satisfactory match.

The tuner will merely click once if it is not receiving RF or has already attained a good match on the frequency you are tuning up on. It remember the last 45 frequencies it was successfully tuned on for about 1.5 weeks time.

It will tune 3.5 to 30 MHz on an 8.2 foot whip and 1.6 to 30 MHz on a 23 foot wire.

Yaesu does not have a long wire tuner ?

For Sale:

Kenwood TS-700SP 2M All-Mode Transceiver
144.000 to 148.0000 MHz in 4 bands of 1 MHz
USB, LSB, CW, AM, FM
SSB, FM, CW: 10 Watts Output
AM: 4 Watts Output

All solid state

Built-in frequency counter provides direct
frequency display precise to 100 Hz for
internal VFO, External VFO or fixed crystal
operation. 7 digit resolution.

110 VAC or 12 VDC operation

Repeater operation - Normal, Reverse or Off
provides 600 Khz shift up, down or simplex

Dual Vernier Tuning provides bandspread tuning of 25 KHz
per turn on one control with 100 KHz per turn on other.

11 fixed frequency crystal positions provide for fixed
frequency operation operation on 44 fixed channels (11
on each band)

Noise Blanker, All-Mode Squelch, RF Gain, Automatic AGC switching,
RIT, VOX Gain and delay, built-in speaker.

Built In VOX, Receiver Preamp,

Remote VFO Operation, Semi-break-in CW with Sidetone, Low Power
(1 Watt) switchable from front panel)

Rig comes with AC power cord, DC power cord, MC-30S Hand Mic with
switchable noice-canceling for mobile operation.

Cosmetics - very good for age; minor scratches.

11 crystals installed in fix board; 2 are dead
(14X.520, 14X.700, 14X.730, 14X.760, 14X.850,
14X.880, 14X.925, 14X.940-Dead, 14X.180,
14X.195, 14X.???-Dead and Unmarked

note 14X refers to 144, 145, 146 or 147; dependent on
1 MHz section of band selected.

Operating Manual with 4-page fold out schematic included.

Rig has not been used much in the past 5 years; other than for occaisional packet and monitoring repeater. I used it mobile in a mini-van with a SQLoop omni-horizontal mobile antenna for mobile sideband opeation for approximately 1 year. I removed the mini 4-pin din jack (external DTMF Pad Option) from the rear panel to install a mini bat-handle toggle switch to allow internal speaker monitoring when external speaker jack is feeding TNC for packet. Notes on schematic indicate previous owner performed squelch hysteresis modification (I think this is outlined in the Kenwood service flashes on their site and various Mod files around the net)

For Sale: Motorola Saber II Ruggedized, VHF, Secure capable

RADIO IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=134788523

Model #- H99QX059H
Factory ID - H43QXJ7139CN

120 channels
6 watt output
136-174Mhz
Secure Capable (unknown if module installed or not)
Built-in Scanning, Selectable PL, plus many other programmable options!
CTCSS/DCS/PL/MDC600/MDC1200 capable
Brand new battery & Antenna
Radio comes programmed to your specs

For those not familiar, this radio has an alpha display, and has 10 zones, each with 12 channels. Radio is in excellent shape (8 out of 10 cosmetically). Only a few small scratches on the case, but is in 100% working condition... This radio is worth almost $2000!!!

RADIO IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=134788523

Please email with any questions. Good luck, and thanks for looking!

I recently discovered "Four-Aces Communications" way out on Main in east Mesa (Val Vista). Has anyone done business with this guy? He seems to cater to the CB-crowd, new gear and service, though he has a side room full of BA gear, a lot of older Yaesu, pre FT-101, some Collins, Dentron, National, Hallicrafters, Heathkits galore, Hammarlund, everything but Drake it seems. I ask the question because everytime I go in there, the owner/head salesman/repair guy seems to be in the middle of an argument with a customer, and has asked some pretty steep prices, even for *asking* prices (like $800 for a pair of Hallicrafters 2 & 6 xvrtrs, kind of dingy, chipped cabinets, and $400 for a very dirty caseless SX-28 and speaker, bad filament winding). Should I even be bothering to stop in to look his pile over every month? I'd really like to hear from folks in the area who have done business there, or at least been there. What do you think?

Thanks to all who responded to my message, looking for a TimeWave DSP 59+. I have found and purchased a unit, it is soon to be on its way.

One suggestion for all those who have a non-DSP HF rig like I do, you probably should buy an external DSP while you can. It's looking more and more like this category of product is going the way of the carburetor and the slide rule. This is due to the *fact* that pretty soon all HF rigs are going to have DSP built-in, effectively killing off the add-on market.

Regards;

Neil

Source record: 103157

Hello Phil:

I just moved into a new neighborhood and have about the same problem as you. I use to live in a townhouse before that and had to use the attic for all my antennas. I used what is called a G5RV mini that was in the adds in the back of QST it is 26' long and center feed with 12' ladder line and has a PL-259 connector where you can connect your coax. I can work bands between 10 and 40 but it does require a tuner. I am also using the same antenna in my new house. Even though it is a compromise it works..

Ross..

1582. "Turnkey" wireless modem needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-21 00:00:00 UTC
From: bgat@usa.net
Message-ID: <7n4g14$r73$1@nnrp1.deja.com>
Source record: 103158

Gentle persons:

I'm looking for a commercial or kit "turnkey" wireless modem that operates in the amateur radio band. 9600bps would be nice, but I'll take anything down to, and including, 300bps. Something that gives me a range of 20-50 miles would be preferable.

I want the stuff that's completely idiot-proof: RS232 serial port on one end, antenna on the other, and a fixed-frequency transmitter in the middle. I don't need sexy hardware, nifty displays or neat packaging--just a circuit board or two would be exactly what I'm after...

Does such a product exist?

Thanks!

b.g.

The fan will run all the time, and should be barely audible. To tune up the rig; 1-Set MODE to TUN position, set meter to ALC, key the TX and peak the meter reading with the DRIVE control. 2-Set MODE to TUN, set meter to IP, key the TX and dip the meter reading with the PLATE control. 3-Set MODE to CW, set meter to RF, key the TX and quickly peak the meter reading with the LOAD and PLATE controls. In this last step, you are applying full current to the finals, so be sure to do the tune up quickly and into a good antenna or dummy load. All the above assumes that the idling current and hi voltage are set more or less to specs.

It is weird to program...unlike any other HT I have encountered.

For the same money, you can get the Alinco dual-band credit card radio.

OR - for substantially less, you can get a full-featured, 5-watt HT -
like the ADI AT-201HP.

Heck - even the Alinco single-band credit card radio is, in my opinion,
a more intuitive HT to program - and it's over $100. LESS than the Radio
Shack HT.

>I've run across your type here before.

I suppose it does seem odd to you that someone wouldn't want to throw away
hard won RF power as heat. I suppose it does seem odd to you that someone
might consider it a better idea to radiate that RF. Resistors have their place
in circuitry, but you wouldn't use a resistor Pi pad as the output matching network
of a transmitter (well, perhaps *you* would). The better idea is to put the power
into the *radiation* resistance of the antenna where it will usefully contribute to
your signal, rather than into heating a resistor.

There are exceptional circumstances where resistors can be usefully employed
in an antenna. The terminating resistors of a rhombic or beverage are examples.
They consume only a small fraction of your power while usefully enhancing the
pattern gain of those antennas. But this particular antenna design can dump the
majority of your power into the resistor on some frequencies while producing
a pattern gain no better than a plain doublet of the same length. That's not
a good bargain when a simple LC network (costing less than Chas is asking
for this antenna) can let you usefully radiate better than 97% of your RF instead.
There are better ways to run QRP than using one of these B&W antennas to
attenuate your QRO signal to QRP levels.

What's so non-standard about the balun? It is a straight forward
Ruthoff voltage balun. I don't need Jerry's permission to make one.
Even if it were coverable by a valid patent (which it isn't since there
is clear published prior art which would invalidate any such patent on
challenge), patent law says I can make one for my own use under
the fair use clause without infringing the patent. The only restriction
would be against making them commercially. Since I'm not in the
balun marketing business, that's a moot point.

I have a '98 TJ and I mounted a Dual Band 2m/440 on the spare tire
mount. The antenna sticks up between the spare tire and the plastic read
window up to about one foot above the roof. It works fairly well. The
spare tire mount makes an ideal ground plane. I used one of the flexible
mounts that are designe to attached to a rear view mirror. The only
problem so far has been road salt accumulating around the base of
the mount during the winter months.

On glass should work okay, you will just have to deal with the cable
coming down in front of you on the window. You may to get creative to
hide the cable

Source record: 103174

This rig is great! I work mobile from my mini-truck with a hamstick on the cab roof. The compander really helps the sound quality, especially with a Heil headset mike. I get good reports, even on DX.

The only complaint I might have is to be careful about not damaging the 1/8" phone jack with a long 1/8" -> 1/4" adapter which make a large lever arm.

Also, be wary of the wiring joint on the inside of the SO-239. This connector can flex while being jostled while mobile, and can develop a hairline fracture. This results in the audio cutting in and out (actually loud and soft). An easy fix, though.

Other than those minor problems, I use my TS-50 more than my base rig now!

If you don't like being ripped off, you probably ought to take the time to learn to repair your equipment yourself. Provided you can get the parts (and dealing with the Kenwood parts jobber is a nightmare too), it will always be cheaper, usually faster, and you'll have the satisfaction of knowing that the problem is really fixed, and fixed correctly.

Frankly, I'd be embarrassed to have to send a rig back to the factory for non-warranty service. As a ham, I'm *supposed* to know how to work on my own equipment.

Asmel,
The TS-520SE is a perfectly good radio to
begin your amateur 'career' with . I had a TS-520S
and was happy with it. I don't think it has 160M
though. If 'top band' is not a consideration,
then go for it.

If you have a small yard that is enclosed by a
privacy fence, you might consider the Force-12
ZR3. I understand that they work very well. You
can then consider a shortened 40M dipole for the
attic. Good Luck.

I am trying to working on a Varmit 600. I had a schematic that was located in the CB tips and tricks, the photo copy has gotten replaced. I returned to the local library and found the original was removed from the library. If you have a copy of this would you mind scanning me a copy. I would greatly appreciate the help. I am not sure which volume number it is in but I belive it was in 1-3. It may have also listed it as a Varmit 450.

The TS-520 is very old, but if it is in good condition it will serve you well as a starter radio. As for an antenna, dipoles are always good. A simple doublet fed with balanced line can serve as an all band antenna when used with a balanced tuner (or even when used with switched lengths of feed line substituting for a tuner if you're strapped for cash). If you insist on coax feedline, then you might consider a trapped dipole or multiband fan dipole instead. They are more trouble to build, but you can feed them from the TS520 without an external tuner.

Provided you can get the service manual - it's hard to diagnose problems
without it.

I routinely buy service manuals for all electronic equipment so I'll
have them when I need them, but I've had the manual for an Icom
IC-2350H on order for somewhat more than a year now with no delivery in
sight. It's still working OK - but if it ever breaks I'm stuck without
a schematic. Yaesu seems to include a (tiny but still readable) schematic
with every radio, but Icom doesn't even include a block diagram.

Well, due to a system failure I lost a lot of mail and news, and unfortunately the one message I was looking for (the Omni for sale) didn't get to me until after it was sold... I am still looking for a near mint or mint condition Omni-VI with power supply, filters, mic, and possibly the antenna tuner.. Anybody seen a nice one out here that is a good deal?

Hi all,

Im looking for an Alinco DJ-F4T. Would like one in good condition and with all origional parts. Don't need box or book. But would like the origional antenna, battery, and charger. If anyone would like to sell one you can reach me at.

RBenton3@earthlink.net.

Thanks.

Robert

I have a 2 yr old mint 6 with + ver.1 upgrade that I'm thinking of selling.
I'd need $ 1550 plus shipping. Also have some filters, 961 power supply and
a hand mic that I'd sell all or part. Let me know if interested. 73, Brian
K3USC-Erie,PA 814-866-2585 or e-mail.

1625. Help! 100Amp DC Contactor

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-21 00:00:00 UTC
From: oo7stoked@my-deja.com
Message-ID: <7n5c7e$81h$1@nnrp1.deja.com>
Source record: 103201

Can anyone help me find a manufacture of a DC contactor with the following specs.:

Coil: 110V DC (Preferably a dual coil system)
Contacts: 100A, 150V (DC)

I also need a protection device that is capable of automatic reset or electronic reset. A thermal overload or instantaneous overload to protect the contactor! The overload will break the coil of the contactor.

All I can find are three pole motor starters. I have been using them to break both the + and - legs, and I have to wire two poles in series to use the thermal overload. I only need a sing pole DC contactor.

I have contacted the engineering departments of ABB, Allen Bradley, Square D, GE, Joslyn Clark, Stancor, and C & H. Some of these manufactures offer a device that will work, but they appear to be overkill for my application.

The application is for a DC generator.

I am not a fellow HAM, but I am an electronics hobbits in need of help.

1626. Re: KENWOOD REPAIR ABUSES

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-21 00:00:00 UTC
From: Ham <ham@hotmail.com>
Message-ID: <379627B1.29F66F39@hotmail.com>
Source record: 103202

Gary,

I read many of your posts and usually say "right on" and I'm pleased that you are frequently the one who responds to postings with a voice of sanity and reason but in this case YOU ARE OFF BASE and I am ***NOT*** embarrassed in the slightest. Hear me out...

I agree that I'd wish to be able to repair my own equipment but I have enough sense to know that I am not as steady with my soldering as I once was, my binocular vision is not nearly as good as it used to be (I revert to a headband magnifier at times) and that I am not qualified to handle SMT components buried deep within "modern" tightly packed gear.

The unit I had repaired had an obvious PLL locking problem in a 1.2 GHz module thick with SMT and I lack the current expertise and experience and equipment to troubleshoot and repair such equipment.

All that aside, I have been a ham for just short of 45 years. I earned an MSEE for a well known university with a well respected engineering program in the days when one was expected to be able to do hands-on electronics and did so in an R&D instrumentation (nuclear & electro-optical) environment for several years and then spent time teaching electronics in a vocational program. Unfortunately, as you probably are well aware about the time that SMT became the norm - jobs for technicians moved out of the country and to low cost areas very rapidly and our program rapidly found that we had no students except in non-hands-on areas related to computers and software.

For several years I spent more time teaching mathematics, computer information systems, computer applications and engineering than electronics and worked in a position with the responsibility of putting together computer classrooms and labs and putting together a computer repair facility (board swapping as we all know!).

I have recently sold all but my VHF/UHF solid state gear and have started to restore and rebuild my tube type gear for the very reasons you suggest. I want equipment I can SEE, TOUCH, TROUBLESHOOT to the component level, and SOLDER WITH A SOLDER GUN (or at least a 37.5 watt pencil!) and align with the HP 606A that I bought a few months ago and signal trace with the HP 410C and Tek 60 MHz scope. I worked enough a couple of summers in the magnetic recording business to know that I don't function well having to view components through binocular microscopes or even though a headband magnifier.

Sort of the Peter Principle where I've reached my level of competence?

The bottom line is that any SANE ham who buys modern SMT radio gear has to figure that the original purchase price is a LARGE DOWN PAYMENT and that additional "lease payments" are required whenever the gear fails to work and it is sent for factory authorized servicing.

Like it or not, repair to the component level with surface mount gear, heavy with digital circuitry and LSI is something that only a very very very small percentage of hams are capable of doing and, Gary, I wouldn't doubt that you fall into that very small

percentage. It seems from postings of yours over the last many months that you combine a profession and avocation quite seamlessly with good success. I am always impressed with the breadth of your knowledge when I read a posting of yours. Unfortunately most of us don't have that talent and capability. Many years ago I became Apple certified as a Macintosh Repair person and taught myself by hands-on experience how to troubleshoot and repair just about any DOS/WIN machine and that really was only knowing what simple tests were necessary to point to board level replacement. I had several students who worked for Apple in their service depot of that time and they told me that they were to spend only 10 minutes with the automated test equipment trying to make a component level repair and if unsuccessful the board, no matter how costly, went into the dumpster. So even the manufacturers realize the problems in dealing with component level repairs and they have relatively sophisticated automation to help point to the problem.

Thanks for your thought Gary! To the rest of you reading this long-winded treatise, don't feel bad that you can't repair SMT and microscopic devices. It takes a special breed and we should not feel intimidated by those unusual and special individuals who have that talent, time and inclination. Just think about simplifying your life with discrete component gear, solid state or tube type, and set aside a budget for those period repairs that we all know will be required by an expensive repair facility.

Buyer changed his mind. FT-736R again available.

For Sale: Immaculate Yaseu FT-736R VHF/UHF all-mode satellite ready base station transceiver. Purchased new by me and has less than 100 hours total use. There is not a single scratch, smudge or blemish on it. It is still like
brand new and has always been in a non-smoking environment.

This 736R comes with the 144 nd 432 Mhz modules, optional Sub-audible Tone Squelch board (FTS-8), Electronic Keyer Unit, DC Power Cable. Packed in the original box with operating manual, service manual and hand mic.

Price: $1125.

Alan, W3BV

Arright, heres the deal.....

I recently (within the past week) bought a Yaesu FT-50, the first night I got it , I was scanning around in the 900 Mhz range, and I was picking up cell phones. I didnt know what the were that night. The next day I performed the MARS/CAP mod to it, and I still received Cell phones (I found out they were cell phones by listening to them for a while). My question is this.....if Cell phones are supposed to range from about 869 to 894 Mhz, then why am I pickin up between 960 and up. I thoguht they were Image freq's, but I've never seen an image freq of 100mhz, and also sometimes I pick them in about 750 to 800mhz as well. If anyone could give me any info on this, I would really appreciate this. By the way my serial num is 9cxxxxxx (no freeband;( ) if that has anything to with it.

Thanks

Nick

There are three pots on the inside of the radio for power. As I
recall, one of them is the CW drive, the other is the SSB ALC,
and the third is the FM power output. They are marked on the
circuit board pretty clearly (in white lettering).

Open the radio, flip open the two "halves" and the adjustments are on
the half of the radio that does not "flip" open. Look in the middle
of the board. Schematic should show these variable resistors too.

No warranty expressed or implied. Proceed at your own risk.

> the cord permanently ??? I CAN'T TAKE THE STINK !!!!

The easiest way to fix the problem, is to call Icom in Bellevue Washington> ,
ask for the Parts Dept. and order the replacement cord. When you get the cord
just swap it out with the old one. You will need a soldering iron, screwdriver,
solder, I would think you have the tools, a simple swap. And it is as good as
NEW!!

Good luck de Pat KK6PD

Dave-

Wrong! It is NOT legal. The question is whether or not you would be prosecuted for doing it.

I think a good rule to follow would be to consider the nature of your emergency. If it were a dire situation, where not doing it would result in loss of life or serious injury, then the risk of being prosecuted for violating the law might be worth taking.

You also should consider that dispatchers may not believe a strange caller. They may consider an unknown caller as someone who wants to anonymously lure police or emergency workers to a site, and then ambush them.

Will,
given the crowd he caters too, I don't think its really worth the drive.

There are probably other (better) places around town, but they
seem about as easy to find as hens teeth.

however, if you want a good radio equipment dealer,
you could try appollo communications on 43rd Ave and northern.

1644. Re: Small 2M HT Recommend?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-21 00:00:00 UTC
From: usc95@aol.com
Message-ID: <19990721192107.12925.00000907@ng-xa1.aol.com>
Source record: 103220

I've been looking at the VX-1R, but read that it cannot scan multiple bands at the same time. In other words, if you have a 3 frequencies in memory, each in a different band segment, like 800 mhz, 440mhz, and 2m, it is impossible to scan as is typically done on a scanning radio.

Does anyone know if this is true?

Hello Neil,

Don't count the DSP processors out quite yet. There is NO digital support in any of today's current radios and a great many of our customers are running DSP boxes in addition to their FT-920s, 870s, etc.

DSP design has not "run out of gas" and will remain ahead of the internal DSP design for awhile. We update our products on a regular basis. When was the last time you received an upgrade notice from a radio manufacturer that upgraded the DSP performance (or much else for that matter :>))?

I agree with the suggestion that finding used DSP-59+ or even DSP-9+ units to use with current used radios is a good idea. I run an FT-1000 with a DSP unit. There is not much that outperforms that combination. Likewise I operate in stations with 850's, 990's, and the IC-765 (one of the best CW rigs ever built) Its a great way to get a top DX or contest station without taking out a mortgage on the house.

Let me know what you think

Gary must have very small hands, perfect vision, a wealth of money and diagnostic equipment, and much free time over years to take the "learn at home" EE program.

The fact is my fellow ham, we all have a set of skills in life and a different motive for being in the hobby. If yours is the technical side of things, I envy your knowledge and skills. However, I enjoy the brotherhood and public service side, and will probably never have the technical skills necessary to repair a radio.

As soon as those skills which you say I should be embarrassed that I don't have are required for my current career as a public accountant, or are necessary for me to be a responsible person, I will share your feeling of embarrassment. However, for now, ham radio is a hobby.

Hello folks,

I build an antennae a while back while in the Army out of coax and some ceramic dog bones.

The problem is, I have totally forgotten how I did this. I.e. the correct lengths of coax, etc.

Does anyone here know how to do this? Or perhaps someone could throw a few URL's at me that will refresh my memory?

Any help would be greatly appreciated.

I don't know the laws in the USA (I don't live there). But are you
sure that it's illegal to transmit on an unauthorized frequency, even
in a life-threatening emergency? This thread started out discussing
using amateur equipment on marine frequencies, not police frequencies -
are you sure it's illegal there too - even to save a life?

>from about 869 to 894 Mhz, then why am I pickin up between 960 and up.
>I thoguht they were Image freq's, but I've never seen an image freq of
>100mhz

The FT-50 uses a first IF frequency of 45.1 MHz. That means that the
local oscillator is run at 45.1 MHz above or below the desired reception
frequency, and the image is 45.1 MHz above or below the oscillator
frequency - giving 90.2 MHz separation between the image and desired
frequencies. The image rejection of the 800 MHz receiver in the FT-50
is nil, so the image is just as strong as the desired frequency.

It happens that the FT-50 uses a local oscillator that's above the received
signal in the 800 MHz band. So if cell towers transmit at 869-894 MHz,
you will hear their images if the radio is set to 959-984.

>and also sometimes I pick them in about 750 to 800mhz as
>well.

Don't know what that is - perhaps intermod with another transmitter?

If the TS430 is in proper operating condition and does not have dents or scratches it should be worth $500 with the accessories you mentioned to the right buyer. That would be a fair price for both parties IMHO.

1665. Re: Questions On Drake L-7 Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-22 00:00:00 UTC
From: Steve Dove <dsp@hifidelity.com>
Message-ID: <3797D371.8BAA0F04@hifidelity.com>
Source record: 102889

Hi Nat,

The L-7 is in two parts, psu and RF deck. Reasonably well built, decent looking. Tubes are a pair of 3-500z, replacement cost $200 - $400 per pair. These tubes are fairly difficult to hurt.

Output power on 20m appx. 1400W-ish with a following wind and 100W drive; fairly typical of a 2 * 3-500 amp. Could probably get more out with a bit more drive, if you insisted.

Does 160 - 10, has input tuned circuits (A Good Thing), operation on the WARC bands was not a design criterion but it may work at reduced output. Never had cause to need it... A dangerous thing (I honestly don't know about the L-7 specifically in this regard) is that many of the older amplifiers of pre-WARC vintage have a major plate-choke resonance at or around 24 - 25MHz; attempted use there (12m) would result in expensive fireworks.

Using SSB or CW on the high-voltage position is no problem - kW plus. It was more of a legalistic thing than a technical one that there was a lower power position for CW on older amplifiers. The kW dissipation of the tubes can handle the high power easily on those modes. RTTY, SSTV, PSK31 or other continuous duty mode, best save the tubes and run on the low voltage setting; expected output high hundreds. The drive must be kept down on AM such that the carrier output power is one quarter of the maximum output of the amplifier whilst on the low voltage range; 200W - ish. This allows linear amplification of the positive-going modulation peaks.

I 've used (and kept running) one belonging to a good friend who lets me use/share his station in contests. It has got abused; failures over the years have been the chronically blowing meter lamps (without which the meters are invisible!) and diode strings in the power supply. This last one has been kept under control by attaching a cooling fan to the PSU.

Hope this helps,

73 Steve W3EEE / G3YDV

1666. Standard Radio (amateur) vanished

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-22 00:00:00 UTC
From: gworth@ibm.net
Message-ID: <37980007.EC9BB8B5@ibm.net>
Source record: 102890

Thanks for the replies. Yaesu did purchase the LMR and marine divisions, but the amateur division seems to have been abandoned. Even Matt, their service guy in Michigan, does not answer his phone. Believe me, we call every number for Standard, every day. Maybe we will try Yaesu. See below for original text.

Gentlemen,
> My friend has a Standard C5718 that is in need of repair. It stays
> keyed at all times. It is under warranty, but Standard Radio in
> Illinois does not answer their phone or e-mails that he sends. He is
> using the numbers on the web page. Even the service person in
Michigan
> does not answer his phone or have the answering machine on-line any
> longer. I suggested calling Marantz-Japan, where the radio was
> manufactured. I find it hard to believe that Standard would just
close
> up amateur radio division operations in the US and Canada and walk
away,
> never to be heard from again...but anything is possible. Does anyone

The buttons on the side and the ABC switch on top of the radio are all
programmable for a number of different features.
Too many to list.

Not sure why there is such little response to my previous postings. I guess no one is in the buying mood or there is truly no interest in what I have to offer or they just don't like posts from DejaVu . Just in case of the latter, I am posting from my personal email account in hopes that I can get some response to my ad.

SWAP/TRADE/SELL in Dallas/Ft Worth area
Yaesu FT901DM - non WARC band HF Tranceiver

Excellent condition. Email me your offer and we might work a deal. This rig is too nice not to be used and I cannot bear to see it taking up my closet space.

Surely, there is a Novice looking for a first time rig. If this is the case, I can make a special deal for you as long as it can be verified that you are a newly licensed Novice. This radio is much nicer than what I started out 22+ years ago.

Maybe you need a backup radio? This would make a nice one. Has everything built-in, AC supply, keyer, AF bandpass filter.....

Not a bad radio for the asking price of $300. Or, trade for "?". Or make a resonable cash/swap offer. A photo can be emailed to you upon request.

de Jerry N5RV

No Lids, No kids, no Space Cadets.

Joe and guys -

My god, I was reading your Collins ad (and drooling) when I came to your last phrase. Brings back a flood of memories - when I was a kid, and then through college, that was the war cry of Mike, W2OY when he called CQ. He lived in NY or NJ somewhere, and said he had a rhombic - he pinned my unpinnable s-meter. He must've been running about 5 KW. But he got on 80 meter AM, on 'his' frequency, and refused to move. He talked only to his buddies, and also refused to acknowledge phonetic calls.

I heard he had a seizure or something one day at the rig, brought on, no doubt, by lids, kids, and space cadets.

It's a tad off topic, unless you consider W2OY as a classic boat anchor, but does anyone else remember him? This would've been in the late 50s and early 60s.

73 to everyone,

Dan W2IQD

Seems like most VHF radios of the 80's vintage offered CW IF filters,
but no SSB filters.
But I've noticed that most filters, at least within the same
manufacturer, have very similar Zin/Zout and insertion loss
characteristics.
Why couldn't one, say, piggyback an SSB filter (assuming there's room)
on a CW filter and rig up switching diodes to switch it in/out of the IF
path?
Or am I just naive...

Hello Folks:

I grew up in southwestern Ontario....about halfway between Detroit and Buffalo if you drew a striaght line between the two. I used to listen to old Mike very regularly. One of his absolute favourite things to hate was SSB when it was becomig popular. He used to rant for hours about "The Donald Duck Crowd" that was invading and ruining ham radio.

It used to be a delight to listen to him fend off anyone who seemed even the slightest bit simpathetic to SSB....even if they were running AM....because after all, he wouldn't even acknowlege a call from a sideband station except to become volatile! Being anything less than a true dyed-in-the-wool AM Man ranked up there with being a Commie Sympathizer that probably listened to Radio Havanna Cuba at night.

I don't think they make 'em like W2OY anymore....a true curmudgeon's curmudgeon. In his defence, he used to have a whale of a signal into Ontario, and the audio quality was always just super....you'd swear he had commandeered a Voice of America transmitter for the day.

All the best.

Lee Smith

Advanced Receiver Research preamp. Model SP144VDG. This
is excellent to use with an ICOM 706 or other VHF SSB Radio.
It really make a difference in hearing a station or not.
It has a built in RF Relay to switch from receive to transmit.
Excellent condition, great for 2 meter SSB and FM DX work. $85

1704. ATTENTION---KENWOOD SM-230 OWNERS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-22 00:00:00 UTC
From: rong@computer.net
Message-ID: <3797a9a5.1379191@news.computer.net>
Source record: 102970

I recently bought a used SM-230 scope--it works very well, and
I am very satisfied. Yesterday, I got the service manual for it.
While looking thru it, I noticed that they show a filter in front of
the CRT. The owners manual makes no mention of this, and I don't see
where it could fit. Evidently, it's not like the graticules that came
with the SM-220, as the scale is either painted or etched into the CRT
on the SM-230. Do any of you "original" SM-230 owners have this CRT
filter ???

1712. Looking for UHF MASTR PRO receiver strip

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-22 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <3797AF87.D459AD4F@yahoo.com>
Source record: 102978
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.vhfuhf

Hi,
Just a wild shot, but I'm looking for a spare UHF GE Mastr Pro receive
strip. Prefer one that is pre-tuned to the amateur band (exactly on
446.0 Mhz) with a crystal (not icom) board and possibly
a GaAs FET front end. Minimum sensitivity needs to be 0.25 to 0.3
microvolts,
no more than that. Needed as a backup for my UHF repeater -- I have
several different models, but cant seem to get the strips that I have to
tune with
any reasonable sensitivity or selectivity (best I can do is around 0.9
to 1.0 microvolt).

This is GE MASTR PRO, not MASTR II receive strip. Think the model is
42ER41G or
something like that.

Pay cash or willing to trade MASTR PRO transmit strips, tubes, etc in
either VHF or
UHF range. Also have a few untested audio mixing shelves, repeater
power supply
chassis, etc (all MASTR PRO).

thanks,
Joe K7JOE

I installed the RFI filter in both my '91 and '97 Explorers, and can say
they do work. It is important to keep the ground lead from the filter to
the frame of the vehicle as short as possible, but you will see some
improvement even if this step is ignored.

I have an as new Icom dual band ht with several included options. This ht is in perfect condition and is a 10 out of a 10 functionally and cosmetically. This ht has a detachable front panel which will let you use it as a speaker microphone and will show all information digitally on the microphone display. The Z1A has an alphanumeric display, alphanumeric message and paging, backlit keypad, independent tuning knobs plus many other features. This ht has an extended receive from the factory and there are many modifications that can be done to enhance this radios capabilities. I am selling this ht with two Icom BP-180 Ni-cad battery packs which are both in excellent condition, two new Maha MH-BP-180 Ni-MH battery packs which were bought in Dayton, BP-170 AA battery case, BC-79 rapid charger, CP-12 cigarette lighter cable with noise filter, HM-46 speaker microphone, new Radio Shack vox headset which was bought in Dayton, soft case for ht and a Comet tri-band high performance rubber duck. I am the original owner and have the boxes, owners manual, sales brochure and all of the standard accessories that came with this unit.
$300.00 plus shipping. n8ihs@home.com

I'm thinking of getting an R-7000 to replace my 20 year old Hy Gain vertical. The Hy Gain is currently located half way up a slope in my backyard. It does ok but doesn't cover the WARC bands.

Cushcraft recommends that the R-7000 be installed 8 feet above the ground. I'm not sure I can get it that high. I'd like to hear from other people who are using the R-7000 who have it less than 8 feet off the ground and would like to know how performance has been affected.

Thanks, Jim Keller

1730. satellite transceiver: minimum requirements

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-22 00:00:00 UTC
From: tilmanglotzner@my-deja.com
Message-ID: <7n66u0hbj1@nnrp1.deja.com>
Source record: 103111

hello,

I found that my new linux distribution comes with some software for operating digital amateur satellites. I would like to try that, but I am not sure which equipment to buy.

So what do I have to look for ?
What are the minimum requirements for a transceiver operating with satellites ?

Thanks,

Tilman

Source record: 103114

Hello. I have been looking at legal limit HF amps (especially for contesting/DX work) and my eye caught the the Dentron ClippertonL. As far as I can tell, these amps will put out 1500w+ PEP on SSB, and around 1000w on all other modes from 160m-10m including 12/17/30. And, as far as I can tell it will work on AM/FM/CW/SSTV/RTTY/SSB and will run fine on a 220 plug. And I assume that these amps have a built in power supply, correct? Please let me know if I'm wrong with any of the above or if there's anything else I should know about the amp. Thanks for reading!

Hello All.

The Problem with Buying/Selling Used gear is that one guys 4 Might be my
8+ on a scale of 1 to 10 and vise versa and to complcate matters a 20 Yr
old Piece of gear that had a rating of 8 might look worse than a 4 Yr old
piece that looks like it has been through the wringer..

Personally, Since i am looking more for functional gear as long as there
isn't any real phyical damage and is on good operating condition that's
usially good enough for me.

Now out and out ripoffs are another matter all togather... advertising a dead
piece of gear as working or anything else along that general line
Instead of stating what actually happens publicly (Libel suit comes to mind)
a Ebay style rating website with a scale from 10-0 with 10 being the
higest (best overall experince with that ham) might be a better idea

Have a nice one all

E-Mail Encouraged...Flames put out with HALON(tm)

John, you are correct, there will probably be a market for add-ons for "a while", I didn't mean to imply there was some kind of dark curtain about to fall in 2 days.

Funny you should mention it, but I've had the frustrating experience recently of trying to find a new slide rule (no kidding). My son is a budding math lover, and I wanted to show him how elegant this tool is, not that I ever expected him to ditch his programmable calculator.

All I could find, after an extensive search, was a dusty, old, really cheap knock-off, with horrendous accuracy, and badly printed numbers. Forget about finding a good new circular one like a K&E, which is what I really wanted...

And no, folks, please don't inundate me with offerst to sell me your slide-rules. The fever has passed.

But the point is there. Just like audio "pre-amplifiers" had their day, I believe so, too, have the external DSP units. Yes, they probably have some bells and whistles that the internal ones don't, but the clock is ticking. Ya don't see too many UHF to VHF convertors for TV's any more, do you? (boy am I dating myself).

Hi Gary,

I value your opinion and would like to hear why you find the 847 a mediocare HF rig. Agreed that the optional filters, Collins 500Hz and INRAD SSB, must be installed for it to be a contender.

In my opinion, the 847 is the best rig for satelitte work available today.

Just wish they would have brought the IF's out the back. Maybe I will put a tap in before the filters.

Regards

I have had great results using the tire mount with a 2M Larson and also a Comet 2/10/40M. I moved the 2M Larson to the tire stop bracket on the passenger rear fender, but the proximity to metal threw the resonence off a great deal. I have to play around with that one a bit, maybe I will get off my duff and do it tonight.

hi all,

I sent this note to Yaesu. No anwer yet. Anyone help, any ideas??

========
Hello,

I am, Frank Sved . Many years ago I purchased an FT-757GX. It has worked excellently up until now. Here is a brief description of the problem;

When I turn off the radio, and it is still attached to a live 13.5v source. I turn it back on it scrambles some of the memory locations and puts in frequencies like 46.001Mhz, which as you know is impossible. Also the SPLIT icon comes on.

If I leave it on for a while, and use the radio. When I turn it off/on again it seems ok...

The radio works fine, other than the memory problems. Recently the radio has not been plugged into a live 13.5v source for 5 days or so.

Could a dead lithium battery cause this problem? If the battery where indeed dead, would being plugged to 13.5v source not supply the 'memory voltage' needed?

Please advise what you suggest.... Thanks a lot.

FRANK SVED ve3gid@rac.ca

1752. Volunteer Position on South Pacific Atoll

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-23 00:00:00 UTC
From: meuzelaar@my-deja.com
Message-ID: <7n8e60$a10$1@nnrp1.deja.com>
Source record: 102892
Cross-posted to: rec.ham-radio,rec.radio.amateur.dx,rec.radio.amateur.equipment

If you have good electronic, electrical and general mechanical repair skills and are interested in spending 6-12 months as a volunteer on a remote SouthPacific atoll, working in a small meteorology department (with very friendly people) responsible for 9 small islands in the Tuvaluan archipelago , please send us your resume.

The Tuvalu Meteorological Service urgently needs to fill the open position of Station Technical Officer responsible for maintenance and repair of all computer, radio communication (satellite and SSB), electrical and mechanical equipment of the main station on Funafuti, as well as that of the out-stations on Nanumea, Nui and Nukulaelae.

Tuvalu, situated approx. 700 NM north of Fiji, is the world's 3rd or 4th smallest country (in terms of land mass) and became independent from the UK almost 20 years ago. The outer islands of Tuvalu count among the last unspoiled South Pacific paradises.

The Government of Tuvalu will provide a cost-of-living allowance which covers food, accomodations and medical care. Travel costs to and from Tuvalu are normally not covered but exceptions may be made for highly qualified candidates. The official languages are Tuvaluan (no knowledge required) and English. There are no known, major endemic infectious or parasitic disease risks.

Henk Meuzelaar
TIMES* Project Coordinator

(* Tuvalu Inter-island Medical and Educational Services)

I suspect it was more likely they couldn't be bothered. If you were a manufacturer looking for a large production run, they'd be tripping over themselves trying to find the right part for you.

> I get the clear
> impression Motorola is phasing out their HF power discretes.

While that might or might not be the case, the impression I got when contacting them for support is that I was small potatoes and wasting their time. My cousin works in the electronic engineering department at an area university, and he strikes out too!

When I was in "tech school" we quickly figured out which companies supported small fry and which ones didn't. For Motorola and SGS-Thompson, we were PNG (personna non grata). There were always Motorola data books around, but they'd been bought by the school. I remember trying to contact SGS-Thompson once for a data sheet on one of their ICs (during the pre-Internet 80s), after leaving several unacknowleged messages in voice mailboxes and writing many unanswered letters, it finally dawned on me that this wasn't going to get me anywhere. Didn't really bother me much until I heard they had bought out one of my favorites - Mostek. I knew then I was in for a difficult time.

These experiences contrasted greatly with my experiences with Texas Instuments, Analog Devices, AMD, Burr-Brown, Teltone, MX-COM, and the old Silicon Systems. They were always forthcoming with data books and

requests for literature. SSI's free K-series modem design handbook is one of the handiest books I've got when it comes to telco interfacing info. I recall writing for more info on an article in AD's Analog Dialogue magazine - got a hand-written reply in the mail from the author. Then there was the time I contacted MX-COM about their CTCSS and modem chips - ended up chatting on the phone with Dan Wrappe, the guy who runs (ran?) the company, for a half-hour on HIS dime, and he mailed some product samples to me. Reminds me of the little gifts I get from MAXIM whenever I inquire about their stuff. Never had any reason to contact Fairchild, Linear (LTC) or Nat. Semi - I was always able to find the info I needed on-hand and later on the 'Net, so I don't know what they're like. I'd been able to assemble a decent reference library from buying used data books at Hamfests, etc.

Unfortunately for Motorola and SGS-Thompson, students and hobbyists don't always remain just students and hobbyists, and when they enter professional life they take their experiences with them. I'll use their products now if an exact replacement is called for in a repair, but if it's design work I'll only turn to their product if there's nothing else available. They've both got fairly decent libraries on-line now, but I know what it's like if I need additional info.

However, not many of the companies I've mentioned deal in RF transistors (that I recall, anyway). I suggest that you think up some good search terms, and head to AltaVista, Lycos, Excite, HotBot, etc. and see what you can find. I'm sure that there are RF transistor manufacturers out there that actually want to do business, and will support a product and its development.

Here are a few old URLs I have that might be helpful - I hope they're still valid...

Ham Radio, ICOM HT T-22A 2m 5w, Used
$245.00/OBO

Description

HT ICOM IC-T22A w/extra battery from MAHA (
Both are
BP173s 650maH) The ICOM IC-T22A is a 2m
handheld
transceiver. Output is 5w (with BP173 battery
)I also am
including the EXTRA BP173 battery from MAHA
which is
650mA. The battery that came with the radio is
the ICOM
BP173. I have used the radio for about a year
and have
thoroughly enjoyed it. 80 channels of memory (
or 40 channel
if you want text description of each channel).
High/low button
lets you choose between 5w and 1/2 watt. Auto
power off
function, priority watch, tone encoder, call
channel, several
scan functions, extended receiver bandwidth
allows
monitoring non ham related activity. options
available for
pager, code squelch, tone decode. Also has
monitor button to
listen on reverse. DTMF keypad and 16
memmories for auto
patch. External speaker/mic input. This unit
fits in your shirt
pocket and includes the removable rubber duck
antenna (
BNC connector), leather case, manual, and
original box.
Condition is perfect. If you bought this new,
you'd pay 239.95
for the ht and 69.95 for the spare battery.
The ht is 2 years

old but not a scratch on it. If you have any questions, i am
happy to answer them. Just ask. Add $10 shipping/packaging
for anywhere in US via UPS ground. Insurance extra. COD,
Money Order or Cashiers Check.

killyt@my-deja.com wrote:
: My question is this.....if Cell phones are supposed to range
: from about 869 to 894 Mhz, then why am I pickin up between 960 and up.
: I thoguht they were Image freq's, but I've never seen an image freq of
: 100mhz, and also sometimes I pick them in about 750 to 800mhz as
: well.

Nick:

I also have picked up the FT-50 transceiver in the last little while. But I haven't heard any cell calls yet--but I haven't been trying either.

Here's how it works with scanners: The image will appear on the frequencies which are double the IF frequency above and below the original transmission's. Okay, maybe an example is in order. :-)

On page 10 of the manual (or under Specifications), you'll see the IF frequencies of 45.1 MHz and 455 kHz. The latter is most likely for the AM aircraft band. The former is the one we want. Double it and you get 90.2 MHz. Now take the frequency of the transmission you want to hear and add or subtract 90.2 MHz to or from it. If you tune to the new frequency you just calculated, you'll be able to receive just like you were on the original frequency, except with a reduced signal strength.

You'll notice the 90.2 MHz number is very close to the 100 MHz number you mention. That would explain that.

This way of hearing frequencies your radio "can't" pick up should also work with any other type of radio. As long as you know the IF frequency, you can do the rest of the calculation. For my Pro-2023 scanner, the IF is 10.7 MHz. I double that and get 21.4 MHz, which is the number I use in place of 90.2 MHz above.

Hope that answers your question Nick.

Message-ID: <7n8rkd$3fh$1@bgtnsc02.worldnet.att.net>
Source record: 102901

Hello all,

I recently installed a new Yaesu FT-90R (my first mobile radio after years of HT's inside the car) in my '95 Toyota Camry...Deciding to protect my investment (and help my insurance a little), I went to one of the better car stereo places in town and had a Viper 600 alarm installed yesterday. Before approving the installation, I asked the technician if the alarm operated in around 144MHz or 440MHz...He said no....I said ok with some reluctance...Today I turned over to a local UHF repeater and gave my normal "KB0JKW mobile monitoring," only to hear a high pitched whine in the receiver until the squelch took over...

I downloaeded the Viper 600 owner's manual today and sure enough, the alarm operates around 434MHz...Any advice as to how to get rid of this whine in my transceiver??? Anyone have a similar problem?

73 es tnx
Shannon

Source record: 102906

I followed the discussion FT-100 vs. IC-706MkIIG but now I dare to ask:
Is there someone around who dares to have an opinion to the DX-70TH,
perhaps comparing it with one of the other mentioned rigs?

OK, the DX-70TH only has HF and 6m, but it is much cheaper and the money
saved could easily be used to find an VHF-allmode with the effect of
having two rigs -- I do not like the all-in-one solution if there is no
need for it and in my case there is no need for it.

1772. FT-8100 DC cable part number

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-23 00:00:00 UTC
From: stevealexander@my-deja.com
Message-ID: <7n9le7klq1@nnrp1.deja.com>
Source record: 102912

Rather than homebrew, I need an additional Yaesu FT-8100 DC power cable.

Does anyone have the part number (from literature perhaps)?

Hi Group,
I need the pin out for the FT-101EE Assy plug on the back of the rig. I don't have a manual and I have to make a jumper for the Assy plug to supply heater voltage to the tubes.
Tnx ofr the help and 73s...John (KB0KSA)

Gary, you're making a nuisance of yourself. There certainly -are-
exceptional circumstances where resistors can be usefully employed in in
an antenna other than your single example. That you refuse to accept
the shortcoming of such an antenna is your choice. Others are not bound
by your approval.

From: Bill Atkinson <atkinson@lilly.com>
Message-ID: <37986205.71398A94@lilly.com>
Source record: 102917

I have a kenwood TH-78A (dual band) HT for sale/trade. This unit is in great condition, probably a 7-8 on a scale of 10 for cosmetic value. I'm getting rid of the unit as I just replaced it with a new Yaesu FT-51R. It includes the SMC-33 SpeakMic (with user programable option buttons), and the BC-15A Rapid Charger. The unit also has the additonal memory chip for expanded memory storage capacity. I have the box, manual, standard AC charger. The manual is a little worn, and partially in braile.

A review of this unit is available at:

http://www.hamradio-online.com/1998/jun/th78review.html

I'm looking for a 2m mobile/base station that I can use in-house and for packet, or possible a dual band 2m/70cm model. I would like to get $225.00 out of this unit.

Hi Dennis for SSB operation see URL:
http://www.dxing.com/modesand.htm
AND
http://wkweb4.cableinet.co.uk/simon.collings/Modulation/SSB.htm#SingleSideband

To see how your USB/LSB switch works -- tune to a Ham Station between
7.150 and 7.300 MHz --- use the LSB position, tune carefully until the
signal sounds normal (no donald ducking), now set the switch to USB --
you won't be able to tune in the station, since ALMOST all Hams operate
LSB on this band.

Repeat this on 14.150MHz to 14.350 MHz with the switch to USB as the
band protocol here is USB.

Actually Hams can operate LSB or USB on these and other bands, but the
protocol (which most Hams adhere to) is 40M and below -- LSB. 20M and
above -- USB, that is to say of course where SSB is allowed.

For Ham band frequencies and usage -- see URL:
http://www.icomamerica.com/amateur/band_charts/HF_band.html

Really depends? Which Birds you want to work.. Goto AMSAT and do some reading, or do a search for differant Satellites. I use a "Comet GP-15" Vertical for 50/144/430MHz, I got the Yaesu ATAS-100 Antenna With the rig, They say it works 40M - 70cM, But I use this for Low bands..
http://www.qsl.net/ac5dk/rs1213/rs1213.html = RS 12/13, Good to work, Not to hard to work!
http://www.sat-net.com/winorbit/help/idxsatellites.html = SAT info....
http://celestrak.com/NORAD/elements/index.html = 2Line Elements for tracking...(You need GOOD tracking, Look for the latest version of STSPLUS.. Good software, Cheap, Mir uses this software on the station..)
http://www.en.com/users/rayd/ft-847/wwwboard/wwwboard.html = FT-847 BBS Site
There is alot of information here, also CAT link for Computer control of the radio...
http://users.sedona.net/~dransom/index.html = THIS ONE!...
Good luck, Jeff N8NOE

1787. HELP, SB-200 on Six meters

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-23 00:00:00 UTC
From: Phil Levin <drpal@waterw.com>
Message-ID: <379893E6.6D05EF80@waterw.com>
Source record: 102927

I am converting an sb-200 for six only. All band switching was removed,

and only the 10 meter input coil was retained as well as a few turns of the ten meter output coil. Rotor and stator plates have also been removed from the tune cap. Harbach power supply w/ soft-start, soft-keying assembly and new fan was installed. A new set of matched Svetlanas were installed. A new set of parasitic suppressers for six by

Al Harbach were installed. (Nichrome, abt 1/2 turn w/ Panasonic flameproof resistors) at right angles to each other. My PROBLEM. Help please, I'm no EE, for sure Hi

1.) One of the tubes (it can vary) will go into serious self-oscillation. -Parasitic Oscillation. (anode turns cherry red in seconds and throws circuit
breakers) w/o any drive at all (nothing connected to input) when I turn the tune cap!!! Input and output coils are parallel and shielded from each other, and cover is on when this happens. I also have an old set of weak CETRONs and it will do the same thing with them.

2.) Can't get a low match on the input circuit. Used a MFJ-259B on the

input, closed the relay and have tried PI networks, L, all sorts of changes to the coils, capacitor values and nothing gets it below abt 8. to 1. Will it change much when powered up??

Thanks for any help and appreciate your time reading this. TU in advance, Phil W2GE

6) Johnson Viking Adventurer - FREE - LOCAL PICKUP ONLY
Only good for parts - rescued from previous owner who left in shed
7) Heathkit VF-1 - FREE - LOCAL PICKUP ONLY
Only good for parts - rescued from previous owner who left in shed

Items 6 & 7 above are "First Come, First Served". They where part of my original Novice station that I operated 22+ years ago. I rescued them from the previous owner who had left them in a shed and they have suffered exposure damage. I had plans to restore them, but just do not have the time. The Adventurer cabinet has some modifications that was done by the origianl builder (of whom I do not know). Not sure the cabinet is worth restoring.

Willing to discuss trades for:
1) QRP/Kit radios/accessories,but must be able to inspect trades "first hand" or via digital photo. Or, know the reputation of the builder. If still in kit form, I will consider trade "sight unseen".
2) CW Paddles - No Bencher Please.
3) Pentium Computer system with floppy/hard drives, SB card, CDROM, 32MB or more of memory. I do not need the monitor keyboard or mouse.
4) Desktop SW Band receivers. Later "Digital" models only please.
5) SW Band Active Antennas or SW Band tuners.
6) Bench 12V power supply. 20A or better.
7) VHF/UHF Allmode radio.
8) Yaesu FT90 Dualband radio - Yep, I know I'm dreaming.
9) Make me an offer, it can't hurt!

For Sale: Ranger RCI-7100V, VHF Portable Radio

RADIO IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=134794510

16 channels
5/1 watt selectable output
148-172Mhz
Built-in Scanning with Priority Scan
CTCSS/DCS/PL capable
Good Battery & Antenna
PC Programmable (cable & software not included)

For those not familiar, this radio has a small alpha display for channel info and to tell if you're Tx or Rx. Radio is in excellent shape (9 out of 10 cosmetically) and is in 100% working condition... Radio does not come with charger (just takes plain old AC adapter available at any electronics store). Radio sold AS-IS, but guaranteed not DOA. Please email with any questions. Good luck, and thanks for looking!

Anyone know how to clear a memory of the Yaesu FT-50 HT?

I can find how to hide a memory from recall in the manual, but no mention of actually clearing a memory so it reads "CHu1" (or whatever channel number) when saving a memory.

I don't want to erase ALL memories, just one or two. Can anyone help?

The concensus seems to be that there is no way to do what you want
from the radio itself. The manual only lists how to mask a channel,
and nobody else has found a way to completely clear one either.

If you have software for loading the radio from a computer (ADMS-1C
or equivalent), you can transfer the contents of the radio to a PC,
clear one channel, and transfer the data back to the radio. This
does allow completely clearing a channel - it actually writes
completely new data into all channels, though you can have most of
the new data be identical to what was there before.

Hello All,

I have a Kenwood TR-9000 2 Meter FM/USB/CW/LSB for Sale or Trade.
It is in 100% working condition and it is in very good condition
cosmetically. This is a mobile All-Mode 2m rig that can be used
at home or on the road.

The display is a RED Digital display. Also has a Communications
Specialists TE-32 PL Encoder that has a rotary knob on it
so you can select a PL for repeater access. This rig
does Repeater offsets. It also has memories.
Noise Blanker, RIT, 2 VFOs, and scans.
This rig comes with:

Service & Operating Manual, Manual for PL Encoder, Base
Microphone, DC Power Cord, BO-9 Base Unit and
Communications Specialists TE-32 PL Encoder.
I am Asking $275.
If you are interested in it, please E-mail me or call me.

E-mail: mikrounit@hughes.net

Phone: (661) 272-6949

If you have any questions, or want to see a picture contact me.

Discount for local pickup - $200
2) Johnson Viking Adventurer - FREE - LOCAL PICKUP ONLY
Only good for parts - rescued from previous owner who left in shed
3) Heathkit VF-1 - FREE - LOCAL PICKUP ONLY
Only good for parts - rescued from previous owner who left in shed

Will swap item 1 for QRP gear.

Items 2 & 3 above are "First Come, First Served". They where part of my original Novice station that I operated 22+ years ago. I rescued them from the previous owner who had left them in a shed and they have suffered exposure damage. I had plans to restore them, but just do not have the time. The Adventurer cabinet has some modifications that was done by the origianl builder (of whom I do not know). Not sure the cabinet is worth restoring.

Actually, I have large hands and wear bifocals. I do have a few nice pieces of test equipment, acquired from the surplus market, but I don't have a fortune invested in it. I have spent my last 36 years as a ham honing my skills. That's what's important. Learning something new, getting a little better at it every day, that's what keeps the rust from forming in the brain.

The same sorts of tricks of the trade that allow a watchmaker or jeweler to continue to work into his 70s also apply to working on SMT equipment. You don't have to be Superman or rich as Bill Gates to do it. You just have to learn a few simple skills that have been practiced by others young and old working in miniature for over 3000 years to move from working on the giant hulking equipment of yesterday to the small equipment of today.

You certainly don't have to be an EE to repair radio equipment. I don't think that I know any repair tech who holds an EE. It simply isn't necessary. In fact, my experience has been that most EEs don't have the right skills to do repair. It isn't what they're trained to do. Unless an EE is also a ham, he probably would never have reason to acquire the skills required for radio troubleshooting and repair.

A ham should have the basic knowledge, he passed a test on it, needed to troubleshoot equipment. He may not have the manual skills, or know some of the tricks of the trade, but those are easily acquired along the way as he gathers experience working on equipment.

Troubleshooting is 99% plain common sense. Knowing that the radio once worked is a huge advantage. You don't have to design it, you just have to figure out what parts have failed and replace them. That isn't hard. (Well it isn't hard unless you're fighting an intermittant. That can be downright infuriating. Having the patience and insight to troubleshoot and repair that sort of problem separates the really great techs from the ordinary ones.)

>The fact is my fellow ham, we all have a set of skills in life and a different
>motive for being in the hobby. If yours is the technical side of things, I
>envy your knowledge and skills. However, I enjoy the brotherhood and public
>service side, and will probably never have the technical skills necessary to
>repair a radio.

Your choice, and your loss for missing out on the unique aspect of amateur radio. No other radio service allows and encourages users to work on or even build their radios. That's the unique factor about amateur radio. CBers can yak with their buddies or shoot skip, GMRS users can join REACT. Cellphone

users can call in accidents. But only amateur radio operators can service or build their own radios. It is what sets amateur radio apart from the other radio services. The others are required to send their radios out for service, we aren't.

>As soon as those skills which you say I should be embarrassed that I don't have
>are required for my current career as a public accountant, or are necessary for
>me to be a responsible person, I will share your feeling of embarrassment.
>However, for now, ham radio is a hobby.

Note that I didn't say *you* should be embarrassed if you can't fix your radio. I said I'd be embarrassed if *I* couldn't repair my radio. I consider that unique aspect of amateur radio to be very important. Obviously, you don't. It is a hobby, we do as little or as much as we want with it. I'm not telling you what you have to do. That's your decision. The door to the shop is open, and there are plenty of people willing to help if you want to come in, but no one is forcing you to walk in that door. It is something that you are uniquely permitted and encouraged to do as a ham, but it isn't something that you're required to do.

It isn't difficult. I have large hands, wear bifocals, and am not as young as I used to be, but there are some relatively simple techniques that allow you to work with those tiny parts. For the most part, they are the same techniques employed by watchmakers and jewelers, the latter for nearly 3,000 years, to work in miniature. Most of the best of these guys are *old*, yet they still work with those tiny mechanisms. They aren't special supermen, they just know a few tricks you don't.

Get a couple of sand bags on which you can rest your wrists. That will do wonders to steady down your hands. Forget the binocular stuff, get a jeweler's loupe, and a bright light, so you can really see what you're doing. Throw away your soldering iron too, it is virtually worthless for working on SMD. You want a static hot air source. I use the Weller Pyropen Jr with a hot air shroud. It is the right size and has the right amount of heat for this sort of work. You'll also need a pair of tweezers and some toothpicks to manipulate the parts and apply solder paste. You'll also want some Solderwick to clean up pads and a bit of modeling clay to form heat dams for parts you don't want to unsolder. A few dental probes, sharpened to needle points, are handy to have too. They can position parts, or serve as extension probes for your meters and scopes. That's about all you need in the way of special equipment. It should cost less than $100 if you buy everything new.

>The unit I had repaired had an obvious PLL locking problem in a 1.2 GHz module thick with
>SMT and I lack the current expertise and experience and equipment to troubleshoot and
>repair such equipment.

You'll never have that expertise or experience if you don't dive in and get it. Look, the radio is paid for, right? You own it. If you tear it up, no one is going to fire you. The very
worst that can happen is you'll have to buy another one, or more likely just a replacement module. You really have nothing important to lose. Approach this as an opportunity to learn some new (to you) tricks.

>I have recently sold all but my VHF/UHF solid state gear and have started to restore and
>rebuild my tube type gear for the very reasons you suggest. I want equipment I can SEE,
>TOUCH, TROUBLESHOOT to the component level, and SOLDER WITH A SOLDER GUN (or at least a

>trace with the HP 410C and Tek 60 MHz scope. I worked enough a couple of summers in the
>magnetic recording business to know that I don't function well having to view components
>through binocular microscopes or even though a headband magnifier.

I touched on most of this above. You might find that you can function well when you have the right tools and techniques. I detest headband magnifiers. They make me dizzy. I find binocular microscopes very inconvenient to use. A good old jeweler's loupe works just fine, however. Used with a good strong light, you can really *see* what you're doing.

The biggest thing you need, however, is confidence. You've got to say to yourself that anything someone else can make, you can fix. And you can too. It might take you longer than a tech who does it every day, but you can do it. After a while, you might get a hankering
to take apart that old watch to see what makes it tick, just because you know that you can.

>The bottom line is that any SANE ham who buys modern SMT radio gear has to figure that
>the original purchase price is a LARGE DOWN PAYMENT and that additional "lease payments"
>are required whenever the gear fails to work and it is sent for factory authorized
>servicing.

Then I must not be sane, because I don't look at it that way. It is just another clock, and I'll poke into der springenwerk if I want to, and I do, in order to see what makes it tick. That's a large part of the reason I bought it. I'd be very disappointed if I couldn't
find a reason to pull off the covers and go poking around inside.

>Like it or not, repair to the component level with surface mount gear, heavy with digital
>circuitry and LSI is something that only a very very very small percentage of hams are

>profession and avocation quite seamlessly with good success. I am always impressed with
>the breadth of your knowledge when I read a posting of yours. Unfortunately most of us
>don't have that talent and capability.

I don't believe that for a moment. The only thing I think may be a bit special about me is my attitude. I'm not afraid to tackle new things. I approach every task as an adventure. I'm not afraid to fail, but I don't expect to fail. I'm damn sure not going to let some inanimate
object beat me. I'm smarter than a hunk of silicon, and I'll beat on it until it acknowledges
that fact (or breaks into a zillion pieces). I'm at the top of the food chain, and I intend to stay
there. (A *little* chest beating in the mornings is a *good* thing.) Clint Eastwood said a man
has to know his limitations, but we shouldn't take that as an excuse to quit. It just means we
have to work around those limitations by learning new ways of doing things.

>Many years ago I became Apple certified as a
>Macintosh Repair person and taught myself by hands-on experience how to troubleshoot and
>repair just about any DOS/WIN machine and that really was only knowing what simple tests
>were necessary to point to board level replacement. I had several students who worked

>for Apple in their service depot of that time and they told me that they were to spend
>only 10 minutes with the automated test equipment trying to make a component level repair
>and if unsuccessful the board, no matter how costly, went into the dumpster. So even the
>manufacturers realize the problems in dealing with component level repairs and they have
>relatively sophisticated automation to help point to the problem.

Yeah, but that's because they have to measure everything on a balance sheet. We don't.
We don't have customers clamoring for their equipment, which has stacked up at the depot
10 feet high, to be fixed. We've just got a challenge to tackle, at our own pace, and in
our own
way. If it takes us a couple of evenings to fix what a factory tech could fix in 10
minutes, it
doesn't matter. We don't have a supervisor holding a stopwatch breathing down our necks.

Now I'm not a fanatic about doing component level repair. I will toss a board if I think it
will
be more trouble than it is worth to repair. I don't bother to repair computer boards
anymore.
I just treat them as big parts. I could repair them, and have, but it doesn't make much
sense
to do it. The one I have is probably obsolete anyway, and a new one is cheaper than the one
I have in my hand. I'm not going to spend 5 hours on a $45 board, unless I just want to
know
what makes it tick. I don't bill my hobby time at the same rate as my professional time,
but
some sense of proportion has to be maintained. If I'm not getting value for time spent,
I'll
do something else.

From: larmar@eaze.net
Message-ID: <379a4953.5459545@news.eaze.net>
Source record: 102998

Okay, I know its old equipment but I am getting back into ham radio after a long absense and still love the old tube final radios. Given the choice, any comments on which would be a better radio, a TS-830s Gold or a FT-101ZD? Which would be better service wise (getting parts etc.)? Any other tips would be appreciated!

Thanks

>with every radio, but Icom doesn't even include a block diagram.

Yeah, that's deplorable. I just won't buy a piece of equipment that doesn't
include at least a schematic. I buy service manuals for anything that
doesn't already come with board layouts and parts lists. For things that
have microprocessors (and most things do today), I also expect at least
a functional state diagram for the firmware so I have a clue what it does.

Expecting a written theory of operation section is really too much to
ask today. Even professional equipment doesn't have that anymore.
That's a pity, but after seeing some of the pathetic illiterate attempts
to provide that from some of the manufacturers, it is probably a lost
cause. Either engineers are no longer required to know how to write
lucid descriptions of their designs, or the job is palmed off on some
hack who hasn't a clue what he's writing about.

I installed one in an IC211 several years ago. It made a *huge* difference
in the weak signal performance of the radio. (Not hard when you consider
the stock radio was pretty pathetic.) Anyway, the installation went smoothly,
and I liked the result. I doubt you'd see as dramatic an improvement with a
newer radio. Most are pretty decent from the factory today.

This unit is in cherry condition. I just sent it to the ICOM service center for a through checkout. They replaced a few item to bring it right into specs (dried out caps, mostly). It was working but I felt it needed a good run through.

This model has the Pass Band Tuning and Notch. I will include as many of the parts for computer attachment as I can find for free.

It has the very narrow CW filter option installed.

The case is not scratched. The display is completely clean and clear -- no scratches. There are no case markings or knobs markings worn in the slightest. Picture will be sent on request. I treasured this radio and took good care of it. I have the original box and manuals.

I would like to get $550 or better offer, shipped, insured anywhere in the U.S. (C.O.D. extra).

I will be moving soon and will be upgrading(?) to a transceiver for HF. Look for W5MDM on PSK31 really soon! I have been copying it with this receiver lately.

This is an excellent receiver for SWL or Amateur use. Ask around, it is well known and respected.

Source record: 103061

I can't comment on either the FT-100 or any of the 706 models, but I have owned a DX-70TH for a bit over a year and I think it's a good radio. I bought it primarily to have something for 6 meters mobile. I've found it to be a very decent rig for SSB, but I also wanted to play FM now and then and the 70 falls short there. The FM detector is pretty bad and the squelch is even worse. The CTCSS encoder is only dip switch programmable (c'mon!). Other than that, my only other minor complaint is that the noise blanker, while it does a good job on the noise, punches "holes" in the audio, giving SSB stations that sort of rough sound. I very much like the fact that the radio has large buttons for the most used functions. The items that have to be set in menus are mostly the "set and forget" functions. I don't mind menu functions and small buttons if I'm sitting at home, but when bouncing down the road in my Explorer, I'd rather have buttons I can see and hit without becoming part of a tree. I may wind up going for either an FT-100 or a 706 MkIIG myself if the FM works better, but I'm not in hurry until I get a chance to check out these rigs myself. As a last comments, the lower price now on the DX-70 certainly makes it more attractive, if you don't need the other bands that you get with the 100 or 706. Hope this helps. Take care.

Hi, I have a nice Ten-Tec 238 antenna tuner....BUT (aarrrggH!) the dial cord is broken, and it looks like a bear to figure out where what-loops-where, etc. to replace it.
Does anyone have a dial-stringing diagram to share?
I got this from an estate, and could not locate the manual for it...perhaps the string diagram it is in there? Thanks in advance for any guidance in re-stringing and calibrating the dial scale back up.

Thank you,
Joe Pratt, Tubecntral@aol.com

1856. Suggestions on a Mil-Spec HT with paging and messaging

Newsgroup: rec.radio.amateur.equipment

Check the Yeasu web page (www.yeasu.com). They list the FT50R as meeting
MIL-STD 810. Sounds to me like you already have what you want.

Be careful in how you interpret marketing claims. While I've
generally
found Yaesu equpiment to be well-built and quite durable (I've dropped
a Yaesu HT and had it go bouncing down the hard-floored concourse
while running ot catch a plane on several occasions with no ill
effects on
the radio.), the "Mil-Spec" bit is, a bit of a stretch.

Again, from my experience they are fine radios and quite durable.
But, as one
who worked for may years with REAL Mil-Spec stuff for Rockwell, I
believe
the implication that the radios meet (all of) the Mil-Spec
requirements is
a marketing ploy which is missleading. (this same observation would
apply to
any of the other manufacturers who may make similar implications) I
don't
believe for a second that these radios are "full Mil-Spec" by any
stretch of the
imagination. They may meet a few of the easier requirements, but I
don't think
they'd stand a snowball's chance in hell of meeting the FULL range of
tests and
test conditions required by Mil-STD-810(whatever the current version
is).

In closing, while I like Yaesu, believe that they make good products,
and have
personally been favorably impressed with their performance and
durability, the
```

"Mil-Spec" claims are, IMNSHO, a stretch of the truth that should be dropped
from their marketing/advertising campaigns.

I removed the potting compound yesterday. The Kenwood SB on the mod said it would take about an hour. Well it took closer to 4!. Removing the VCO #5 shield was the hard part. Picking away the potting compound wasn't hard but took time. The Kenwood SB is available for download from their FTP site. I didn't repot the VCO with Hot Melt was indicated in the SB. My 440 is only used in the shack. If you are doing the mod, don't forget to recenter the VCO by adjusting T20 to achieve +5VDC at TP11.

The radio seems to be stable again. I'm monitoring PSK31 signal as I type.

Marc

I am considering purchase, directly from Japan, of the Tokyo HP 750HT handheld 40m/15m/6m triband SSB/CW HT. This had a brief write-up in QST a few years ago. Yet there is very little written about this and the Web site is in Japanese.

I very much like the idea of portability - something that can easily pack on a business trip - but is it really practical. Previous users - how does it work compared to other QRP rigs?

1864. THE DIFFERENCE BETWEEN THE MC-60 & MC-60A

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-24 00:00:00 UTC
From: rong@computer.net
Message-ID: <3799be22.1594765@news.computer.net>
Source record: 103077

I found the difference between the Kenwood MC-60 & MC-60A microphones. I have an old Kenwood brochure, and it has a small picture and description of both mics. The MC-60 only has 2 buttons--a PTT and a PTT LOCK---no up/down, and no amplifier, and a 4 pin plug at the end of the cable.

The MC-60A has 4 buttons--up, down, and the PTT and PTT LOCK. It also is amplified, and comes with an 8 pin plug at the end of the cable, and a dual impedance switch on the microphone itself.

Evidently though, Kenwood did not change the base casting, as both the MC-60 & MC-60A only have MC-60 cast into them. So, if you have an MC-60 with the up/down buttons, an 8 pin plug at the end, an impedance selector switch on the mic itself, and an amplifier in the base, it's actually an MC-60A.

I have an MC-60A, and it is as described above. The instruction sheet says MC-60A on it, but the base casting only says MC-60. Now we all know what the difference is. If you want to see the actual section of the brochure, you can view it at:

My most recent experiences with the Cerritos Kenwood facility were remarkably similar: My rarely-used TS-140SE loses its PLL lock at inexplicable times for no apparent reason. Last month I sent it back in for repair (second time to this facility for the same problem). I included my credit card # and problem history--but it obviously wasn't even read. The unit was returned COD without a fix (despite the $60 charge).
Fixing problems such as this by myself, without test equipment, parts to try out, tech manuals, etc., is clearly out of the question (despite 35+ years in hamdom and building/repairing tube gear). I, too, have lost faith in Kenwood and will not spend any more time or money on unreliable gear that they can't fix when their product fails.

There has been at least one case in my area were teens where using dad's modified HT to jam police and rescue squad calls. It caused some serious problems before they were caught. Whats the sense in spending hundreds of dollars for radio gear only to tear it open, voiding the warranty, and mod it for frequencies that's illegal???? My deffinition of illegal is an act that could result in causing harm to someone, whether it be physical, mental or financial.

If you take one, you take them all. Cheap means FREE plus postage.
I don't want to throw them out, so the first e-mail I get gets them.

Sept 1957 CQ
DEC 1954 QST

Also have the following QST's from 1983
FEB, APR, JUN, JUL, SEP, and OCT

Please save these from the landfill.

Message-ID: <379B87F0.D83563C3@ix.netcom.com>
Source record: 102742

The MFJ does an excellent job on QRN, but is not nearly as effective on signals that arrive from ionspheric bounce (sky wave). I use mine on the lower frequencies primarily for manmade QRN. The MFJ does not do well with lightning as the strike does not take happen in the same place and the signal generated by the strikes will arrive at different times, making the same phase

settings incorrect for the "next" strike. The newer noise blankers that are internal to the radio are more effective to QRN generated by lightning. There

have been numerous posts on the MFJ. Do a deja search and you will find them.

I think you will find it useless for HF QRM for contesting. It does take some

time to get the hang of using it, and it also takes some time to null a signal. If you are looking to score for the contest, this will slow your Q rate down significantly. Again the MFJ works best on ground wave, not sky wave.

1879. FS: Unusual Collector's Item

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: n7lxo@olympus.net
Message-ID: <379b8685.26265574@news.olympus.net>
Source record: 102743

I have an ITT Mackay Marine Portable Lifeboat Transceiver Type 401-A
that needs a new home.

It is a rugged, compact, entirely self-contained radiotelegraph
transmitter-receiver designed primarily for use on survival craft
(read LIFEBOATS) to promote safety of personnel at sea. As built,
this equipment provides for communication on the 500kc distress
frequency and on the long range 8346kc channel between survival craft
and between such craft and rescue vessels or aircraft.

All power required for operation of this radio equipment is provided
by a built-in, hand-cranked (in the organ grinder tradition) electric
generator.

Unit is waterproof and is built to float after a 20' drop into the
sea.

Power from the two cranking handles is applied to an integrated
electric generator through a "silent" chain ball-bearing drive with a
72:1 angular speed step-up ratio. Original lubrication normally
suffices for the lifetime of the equipment.

RF power losses are minimized in the power amp and output networks by
use of silver-plated hardware, teflon antenna feed-through insulator,
and high Q variometer wound on a low-loss glass-fibre malamine form.

....
NOTE: Needless to say, this equipment must not be utilized such that
it automatically broadcasts false auto-alarm or SOS signals. That
would constitute a Federal crime with substantial penalties. The unit
would have to be modified for other use, limited only by your
imagination and inventiveness. Say...

Field day (they should make a special class for such projects)???
....

The Type 401-A package includes the following items:
a. 401-A transmitter-receiver in canvas cover (the cover is beginning
to show its age after a career at sea). The case has a removeable
cover that protects the control knobs, connection posts, headset and
keyer.
b. Two generator cranking handles stowed within pockets in the cover.
c. A four-section collapsible mast with antenna wire and rigging
stowed within a separate, but attached, pocket of the cover.
d. A braided ground strap wound on a spool; one end of wire is
secured to the panel while the spool is kept within the case cover.
This spool would normally be dropped over the side of a lifeboat but

of course can be connected to any suitable ground.
e. Headphones housed within cover of case, with end of cord permanently secured to the equipment.
f. Spare parts, including the following tubes: 12AT7, 6AQ5, 6U8, 6BJ6, and neon lamp NE51.
g. ORIGINAL OPERATING AND MAINTENANCE MANUAL, which contains:
1. Full description.
2. Electrical circuit descriptions.
3. Operating instructions.
4. Maintenance.
5. Electrical parts list.
6. Illustrations/drawings, including 4 tables & 10 drawings.
h. Wall mounting bracket to wall mount the entire tranciever in its case and cover, as well as provide compartments to stow the spare parts and manual.

This complete package will weigh about 63 pounds when packed so UPS shipping costs could be as high as about $40 depending on your location. Check with UPS to determine your cost for shipping.

PRICE!
I don't know how to price this item so will entertain blind bids received in the next 10 days. I WILL NOT REVEAL YOUR bid to any subsequent bidder.

Any offers tendered should SPECIFY YOUR BID PRICE, and INDICATE WILLINGNESS TO PAY CRATING AND SHIPPING COSTS if you are not close enough to facilitate local area pickup of the unit. I will locate a packer/shipper and provide you with their phone number so such costs can be verified to your satisfaction. This should preclude any misunderstandings.

THE BID PRICE WILL BE GOVERNING, but I reserve the right to offer the unit to the next lower bidder, etc., if packing and shipping costs, or other arrangements for transferring the unit to the highest bidder cannot be agreed upon.

Hope this once in a lifetime acquisition will make someone the talk of their local club.

1886. Squelch locks up on FT-2400

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: Keith Casey <kc7kc@bigfoot.com>
Message-ID: <379b25cf@news.access1.net>
Source record: 102750

I am having a strange problem on my FT-2400. It runs fine if I leave the squelch turned all the way down. If I increase the squelch setting until the noise is squelched, then no signal can get through. If I then turn the squelch all the way back down, I still get nothing out of the speaker. The only way I can get audio after this is to cycle the power or key the mike. When the squelch is locked up, I can see that the S-meter is indicating incoming signals properly.

I don't have a service manual on this radio and hate to spend a lot of money on it because of it's relatively low value. Has anyone experienced this before?

Any help would be appreciated.

Keith Casey

Yes, but it is a LCD Bar-segment display, the number of segments used varies directly with signal strength. It has quick response, but will need an attenuator on the radio if you are so close to the transmitter that it reads full-scale.

Cedars of Lebanon is a state park just south of Lebanon, TN.

There's a major hamfest in Huntsville, Alabama on August 21 and 22, at
the Von Braun Civic Center downtown. It's probably the biggest one in
this part of the country.

An alternative solution would be to program a non-standard split, with
the police frequency in the receive side and a legitimate ham frequency
in the transmit side.

(on the non-technical side of the issue...

I wonder how long our ability to possess equipment capable of
out-of-band transmission will continue if we keep having incidents of
people jamming police with it? Laws do change, and there's no
Constitutional right to transmit on police frequencies!)

1901. Re: Yaesu ft-101zd vs Kenwood ts-830s

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: n3xbu@aol.comnospam
Message-ID: <19990725103833.22968.00001416@ng-fd1.aol.com>
Source record: 102836

Ed,
I have used both and while the 101ZD is a great rig, I think the 830S is one of the best rigs EVER made. I currently have an FT1000D and the 830S compares favorably to it. It has excellent audio quality, a superb receiver, excellent rejection with opt. filters, stable VFO with the opt. external unit, a quiet noise floor, with very few and easily curable bugs. No instant band changing like todays rigs, but still a great radio!
Please reply direct by removing nospam from my address...

Thanks,

Brian

>thanks.
>
>danke
>NC4DH

Have you transmitted at least once after power up when this happens ?
If you did check the power being applied to the back of the radio and
see if it is at about 11 volts. Many times some power supplies get a
shot of RF and the internal voltage regulator will go into a low
output voltage state. The 735 will get into strange modes when the
supplied voltage is too low. I have also seen power supplies get a
shot of RF and the output go to 24 volts, then generally destroy's
the 735.

If it is going into transmit all by it's self as your message seems to
read, do you have and extras attached like a all mode packet
controller ? how about disconnecting the mic and see what happens ?

If I am licensed as a ham, and if I am licensed for the Citizens Band, would it be illegal for me to operate the same modified ham radio on the CB band (assuming I operated at the legal power level?). There might be good reason to do this during a crisis , or even if you got a flat tire on the road. I believe that this operation is ok. Correct me if I'm wrong, please. John, K7JY.

Sils (sils@polbox.com) wrote:
: I have found a great variety of freeband mods on several
: FT-50 dedicated websites.
: Some say to remove resistors or unsolder jumpers, and on the
: other hand some sugested only to use ADMS programming software.

: The question is then:
: where I can find a working modification (rather without ADMS)
: for freeband mode.

: 73 & Tnx

The first question is:what are the first 2 characters of your FT50's serial #....hopefully, the first digit is a 6 or less-some low 7's are ok too.
For example...a 6M unit WILL do band-free, but a 7L will not.
I'm not sure exactly where the firmware changed though.

As for which mod...the hardware one is fine, but the S/W one seems to work well as well-you DO need the programming kit(ADMS + the cable) to do it though.
Actually, if you are handy, schematics of the cable are out there, and there are FREE programs out there as well to program a ft50.
But the hardware method is quite easy..anyway, if you want OOB TX, you need to go inside anyway to remove a solder blob to enable the broad TX anyway, so you may as well do the full mod.
http://home1.inet.tele.dk/ehh/mods/radio.htm is one site with the data.
http://www2.crosswinds.net/frankfurt/~vlaski/ has software, if you want to go that route.
There are other sites as well-do a search to find them.

1908. Yaesu VX-1R ARS not working

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: p.richards@ukonline.co.uk
Message-ID: <379b41a7.13390975@news.easynet.co.uk>
Source record: 102843

I have just bought a secondhand VX-1R. Generally, I am very happy with it, but I have noticed that the automatic repeater shift doesn't work.

I have checked that the ARS menu item is set to on, and the shift is set to 0.6 vhf and 1.6 uhf - the correct offsets for this area. Since it didn't shift at 154.600, I assumes it was an american model, and tried going to 146.000, but it didn't shift there either.

Its not a real big deal, because I will program memories with repeaters, but I would like to make it work...

Any suggestions welcome.

If it matters, my firmware is A105.

As far as service goes, I gave up on icom a few years ago. I sent in a late model 220 radio and a hf rig, both had minor problems. Icom sent them back with a note to buy new radios, these were too old. Needless to say I now purchase and use yaesu rigs and have had no problems with any factory repairs. I spoke with them a couple of years ago when I was contemplating the purchase of a set of yaesu twins. The service manager replied that if yaesu made it yaesu repaired it.

Look for ballistic nylon cellphone belt cases. The one made
for the Motorola Startac fits this radio. Some of the companies
who make these cases also make cases specifically for ham HTs.
I got one specifically labeled for the VX-5R at Dayton. It is Ok, but
exposes the radio display. I prefer the Startac case as it offers
better protection to the radio.

But you could be rare DX. Besides, likely not much to spend money on
there, anyway.

The top cover was beige, and the vertical front panel, on the righthand side(has the bandspread control in it) is turquiose.

Built one in 1963, and tried to use it as my Novice rx later.

1933. Help: IC-735 stuck to xmit mode.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: Danke Hirasawa <danke@scientist.com>
Message-ID: <379B111B.E5CA5DBD@scientist.com>
Source record: 102868

My IC-735 has a problem. A few minutes after powering it on, it's going into the xmit mode by itself and stuck there. Once it happens, it would not go to the receiving mode. I checked xmit switch, mic, vox, key...did not help. If I turn it off and wait for long time (over night) it goes to receiving mode normally, but a few minutes later it goes to transmitting and stuck again.

What's wrong and how can I fix it?

I appreciate any help.
thanks.

danke

Interesting definition. But the mod itself is NOT illegal, only using the modified radio on the air illegally (not in ham bands, for example) violates the law .. as would its use, modified or otherwise, in the ham bands by someone who does not have a ham license.

By your definition all my mods would be illegal, since they cause mental stress to ME :-)

To lessen the stress, I never modify a radio that is under warranty.

And, oddly, I've never used a radio I've modified outside the ham bands (Hmmmm...but why did I bother in the first place?).

A small shop in the Dallas area is giving the big guys a run for their money.
The owner is a ham and several of the employees are licensed.
They currently carry Pryme/ADI and Alinco radios and accessories and antennas by Hustler, Tram, and several others. They do a lot of service/repair on both commercial and amateur equipment.

Ken, the owner, is usually at the Mesquite store.

Ok now,

Lets show some disipline and common sense here. There is no law regarding the mod only its use! If you are a true HAM it is your job and responsiabilty to control the use of your transmitter put tx so far off that it cant lock, the day may come when the need of your radio being there in an emergency will come as a HAM you should be ready inspite of public stupidity! Lets not ask for any more "LAWS" to replace "common Senses". I am getting very tired of "LAWS" being created to replace normal everyday logical thinking, the more laws that are written the more STUPID the public is becoming, Grow up and control your radio stop trying to get "BIG BROTHER" to control mine. And further as a point of reference, if you remember back in the days of studying for your first ticket the law does clearly state that you or any other US Citizen can tansmit on any FREQUENCY in an emergency for the protection of life, limb or property if no other means will do. I have at 3 different times gone out of band at an accident on the interstate to get emergency medical out to victim where I had no cell coverage did not know local repeaters and where I was they more than likely did not exsist but on the national fire mut. freq. I was quickly able t receive help. Grow up and stop the crying!

Message-ID: <a3Km3.1332$Gu2.48898@iad-read.news.verio.net>
Source record: 102880

Hello. I've been looking for a device that would solve some of my QRM problems (especially in HF contesting) and I think that MFJ-1025 might just do the trick. If it will do everything MFJ says it will do, then that's even better. Just wondering, but have any of you used one before/known someone who has? And does it really do a good job, or is it just MFJ trying to make a profit? I would use a tribander at about 60ft at my 1st RX antenna, and a Solarcon A-99 1/2w CB vertical with a ground plane mounted 5-10 ft above the tribander as my second RX antenna.
Let me know your thoughts. Thanks!

>that this operation is ok. Correct me if I'm wrong, please. John, K7JY.

It wouldn't be legal. Part 95 regulations require Type Accepted equipment
to be used on CB. Your Part 97 amateur radio isn't Type Accepted for CB
use. One of the Type Acceptance criteria is that the frequencies the radio
is capable of operating on must not be user changeable. In other words,
the radio can't be able to do anything except switch among the CB channels.
Your radio wouldn't meet that criteria, so it couldn't pass Type Acceptance
for use under Part 95.

Now in an imminent threat to life situation, where no other communications
capability exists, some of the rules are temporarily waived. In that case,
using the radio on CB would be permitted. But it had better be a real and
dire emergency, or it would still be illegal.

Note, there are no CB licenses anymore, so that's a moot point.

Now all that said, people do what you're talking about all the time. Most
of them don't get caught. If you're otherwise operating properly, there's
no real, as opposed to legal, difference in your operation than if you were
using a Part 95 Type Accepted radio. But it is illegal, and you could be
subject to sanction if you're caught.

I have a nonworking Tektronix 535 'scope with a dual trace plugin that simply must go. like the title says, it's free for the taking. Doesn't work, but looks like it's all there. Use it for parts, or fix it up if you have the time and manuals. I just hate to dump sonething like this just because I don't have the time and space for it.

I'm in southeast PA. It's way too big and heavy to ship without special packing - and if I had the time for that, I'd keep it. Can meet you halfway up to an hour from Philadelphia.

Source record: 103013

I just purchased one of these radios, started having problems with it
immediately, here is a copy of the email I sent to Yaesu and their response :

Subject: Re: FT 2600M PROBLEMS:
Date: Mon, 07 Jun 1999 13:24:58 -0700
From: Yaesu Technical Support <yaesutech@worldnet.att.net>
To: "Tom Krist Sr." <n8vpf@geocities.com>

Tom,
Thanks for the email. The mic element is hot during RX and will
pick up
DTMF tones (from cell-phones or speaker phones etc.) and the FT-2600M
seems
to be interpreting these tones as keypad presses. We have received a
solution to this problem. We have also received a solution to the scan
lock-up problem you have described.
I'd suggest sending your radio into us at your convenience, and we
will
repair the rig as soon as the information is available. We are located at
17210 Edwards Road, Cerritos CA 90703. Please send a note with the rig
that
describes the problem and includes a daytime phone number and a copy of
your sales receipt. Our current turnaround time is about 2 weeks.
Best Regards, Mike Krueger - N6MIK, Yaesu Technical Support

>Tom Krist N8VPF

I returned it to Yaesu, they fixed the problem of it locking up , but did not
fix
the problem of the mic element hot during RX and will pick up
DTMF tones (from cell-phones or speaker phones etc.) and the FT-2600M
seems to be interpreting these tones as keypad presses.And believe me
this is anoying as hell when you are trying to cary on a conversation.

This radio I believe was released just in time to make the Dayton Hamvention
this year, I am SURE they knew about the problem and just released it anyways.
As you can imagine I am not pleased with them at all, by the time I ship it
back to them
a few times, I should have just bought another brand not such a good deal at
$200
when you figure $15 shipping 2-3 times to get it right!

I would suggest you look into another model

1953. FS: MFJ-969 Rollar Inductor Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <1Lvm3.1228$Gu2.43757@iad-read.news.verio.net>
Source record: 103014

Hello. I have a MFJ-969 roller inductor antenna tuner for sale. This tuner has 2 coax outputs, a balanced wire or wire outlet, and a built in 300w dummy load. It will handle 300w PEP SSB and the meter measures forward/reflected power and SWR at the same time. Power can be viewed by peak or average (selectable). Built in 4:1 Balun and it will tune continuously from 1.8-60 MHz. Reason for selling: I just bought a 1kw amp and can't use a 300w tuner with it for obvious reasons.

This tuner is great! Very compact and will tune almost anything (a very good choice for Field Day). This tuner will load a CB vertical as far down as 40m and a Radio Shack Discone as far as 17m! It works 100% and is a 9+ cosmetically. I have a copy of the manual and I believe that I have the box around here somewhere. My asking price is $155 shipped UPS and insured (costs you around $195 shipped new). I will also enclose a 5ft piece of coax to connect to your rig for free. Thanks for reading, and let me know if your interested.

Source record: 103015

Hello. I have a Radio Shack Communications speaker for sale. It's quite compact and a great choice for mobile/portable operation (or Field Day). Works great on a transceiver or a scanner and produces very clean audio. The cost new is $15 + tax and a trip to Radio Shack. My price is $10 shipped USPS Priority Mail. It includes a cord to connect to a radio, the original box, and the original manual. It works 100% and is an easy 8.5+ cosmetically. Let me know if your interested. Thanks for reading.

1963. FS: Marantz PMD201 Portable Cassette

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: "J. Ervin Bates, W8ERV" <kb8tnq@voyager.net>
Message-ID: <7nehk4$s6e@newsops.execpc.com>
Source record: 103024

Forced to part with a 1 year old Marantz PMD201, portable cassette recorder. This is loaded with virtually everthing you need to do some serious recording. Whether you are logging with it, or other such, you will appreciate the quality.

Here are a few of the features:

* 2 head, mono
* Normal and half-speed recording and playback
* Pitch control 20%
* switchable manual and automatic record levels
* Cue and review
* Ambient noise control
* Mic attenuation
* Tape types Fe, CrO2 or Metal
* Line out phono jack
* 2.5mm remote start/stop jack
* Line in RCA/phono
* built in high quality speaker
* built in condenser mic
* telephone jack for recording phone calls ***consult FCC regulations before doing this!
*AC/DC operation
*Volume and tone control

Paid $325 for this unit one year ago. It has been used twice since then and I am forced to offer it, postage/shipping/insurance paid for $275. It comes with the protective case & carrying strap, as well as the AC power adapter, all paperwork and the manual. I can ship same day, once payment is received.

Please reply direct to work out shipping and payment details and thanks for your time.

I have two Radio Shack BTX-123 business band HT transceivers for sale. (see FCC regulations for operating rules) Originally paid $149.99 each, but will sacrafice for $150 for the pair, plus $10 shipping. Both are in New condition and come with the wall wart chargers. Would like to sell the pair together. Both are programmed for 154.600 (green dot business channel), but they are TWO channel radios, so it is possible to add a second one.

Please reply direct to work out shipping and payment details and thanks.

1967. ICOM 275H----FAN or NO FAN ????

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-25 00:00:00 UTC
From: rong@computer.net
Message-ID: <379b35d2.536387@news.computer.net>
Source record: 103028

I just recently got a used Icom 275H 2 meter all mode radio. I had a 271H before this one, and when I transmitted, you could hear the cooling fan come on---in fact if I transmitted for over 30 seconds, the fan would switch speeds to a higher rpm for additional cooling. However, I don't know if my 275H has a fan or not. I don't see anything, but I hear something when I transmit. I just can't tell what it is. I don't know if it is a very quiet fan, or possibly something inside the radio making a barely perceptable sound. The radio works fine, and has the full 100 watts + power output. Does anyone out there know if this thing has a cooling fan ????

Bill Smith (bs@BSartist.com) wrote:
: You can do a soft mod to some register setting which will clamp the L1 power
: setting to 0 watts. While this means that you lose the L1 setting for
: transmitting at low power, it could be useful in your situation. If you want
: to program in police frequencies to listen to, you could make this mod and
: then store those channels with the L1 power setting. You will be protected
: from transmitting.

: If you're interested, I can dig it up and post it here - unless someone
: beats me to it.

: Bill - n2asa

That will indeed work, but consider using a "off-the-wall" offset
instead-if you throw the O/S far enough off, then no TX!
So the radio works exactly like a "stock" unit, unless you program in the
correct O/S data(in a emergency only, of course)!
For example...try programming 470.000...use a + O/S of 70.00 Mhz.
When you hit the PTT...it will say "ERROR"!
for VHF....try 160.000..use a - O/S of 115.000...again, same result...PTT
gives "ERROR".
If you use a O/S that sets the TX frequency within the CPU limits of the
radio, even if the PLL can't lock up on it, then you will get no TX, but
you won't see "ERROR"
For example-on the VHF example above-if you use a + O/S instead of a -,
then the radio will try to TX at 275 Mhz-it can not do this, but since on
a properly modded radio, 275 Mhz is not of the CPU band limits, it will
attempt and fail to tx...but the "ERROR" looks better(particulary if a
nosey cop starts asking questions-he/she may not understand a "out of
lock" PLL, but he WILL understand ERROR!!
Note, that depending on which mod was performed, the band limits may
vary, but either way it can be figured out.
The data above was for the band-free mod.
It will work for most other band plans as well.
BTW, I've done the same type of trick on other radios as well-my old Icom
W2A was broadband modded, and I was able to do basically the same thing to
"safe" it.

We do not have funding. All the divisions helicopters (the old
Hueys) have been grounded. We only have 524s, no SINGCARS. And
HF rigs are rare. We do have the new MSE (works like cellular but
on 30 to 88 MHz).

We are doing some special missions. These radios will be paid for
out of our own pockets. Just like I have to buy my own rifle so that
I can practice. There is no money for practice rounds.

or you download EVE.exe which can usually be found at
http://www.geol.com/vx5

Eve (Easy VX5 Editor) works particularly well with the VX5R and does
lots of neat things! I've been using it for a month or two now and
think it's great!

1979. Yaesu FT-8100R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-26 00:00:00 UTC
From: shpbur@passport.ca
Message-ID: <379cdff3.39162174@news.interlynx.net>
Source record: 102691

I am contemplating purchasing the FT-8100R. Aside from use on the
two allocated amateur bands, i shall be using the radio to receive
frequencies in the VHF-High band that have been assigned
to railway operations in North America.
These are between 159.810 and 161.565 Mhz at 0.15 intervals.
Is there somebody on the list who has used this radio, for this
purpose and can they perhaps advise the quality of reception on those
frequencies, say as compared to a top of the line Uniden scanner.
Antenna shall be a half wave dual band Larsen mag mount.

Gary, the web and especially these radio newsgroups are awash with folks that just have to open up their radios (because they can). Or they want to avoid the cost of an expensive (hint: buy used) motorola radio in their fire or ambulance volunteer jobs. If the MARS/CAP groups actually had this many volunteers....
I gave up on discouraging folks from freely telling the world how to mod their new HF radio for freeband use. "Its my right, its my right," they say. Instead, I just forward all the mod requests and all the mod replies to Riley at the FCC.
By the way, I had a handheld radio stolen from my car. It was modified for MARS use, but unfortunately, it was also capable of jamming the police. I recall hearing a fellow ham calling for a buddy on 162.55 NOAA weather radio. He had his volume down and didn't realize he wasn't on the repeater. Oh well.

RE: RX-330 PC RADIO and "PEGASUS" PC TRANSCEIVER

I've read the ads and articles about the RX-330 PC RADIO, and I happened to see an article in PC MAGAZINE (August 1999, p. 89) by John C. Dvorak who writes "INSIDE TRACK" about new stuff in computers. At the end of the column he said that Ten-Tec was going to bring out a PC-based transceiver called "PEGASUS". [Ten-tec - 423/453-7172 - www.tentec.com]

Has anyone heard anything about the PEGASUS? Sounds interesting.

1989. Pro-2009 help needed

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-26 00:00:00 UTC
From: Bill Crann <bcrann@nf.sympatico.ca>
Message-ID: <379bdb4b.0@209.128.1.3>
Source record: 102770
Cross-posted to: alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.scanner

I have a RS Pro-2009 8CH scanner. It has developed a problem. It will not stop scanning automatically. The squelch control will not stop the scanner from scanning no matter how low you set it. You just here all the stations while it is scanning. While it is scanning you will hear a second of audio then you have to hit the manual key to find out which station is active. It receives fine but it is very annoying having to use the manual key to stop the scanning. It doesn't sound like it anything very serious. Can anyone help me??? Thanks for your time.

This has been crossed posted on the following: alt.radio.scanner, rec.radio.amateur.equipment, rec.radio.amateur.homebrew, rec.radio.scanner. SORRY :-)

Source record: 102772

Is the IC-707 a good rig, bad one or just plain middle road? I'm looking to get back into hamming, but at a reasonable cost. Found this rig for around the $600 range but have not been able to find out much about it. Don't need bells and whistles, but a good receiver is important. I enjoy swl listening as well as QSLing.

Thanks

Larry

Brian,

It takes a person to push the transmit button, and it is the person who is to blame, not the radio. I have radios "Opened up" because the make for great transverter inputs for satillite work (if P3D ever goes up). I am getting tired of people demonizing inatimate objects as a solution to irresponsabilty. It is faulty mentality, or at least one I reserve to use while raising children.

Just my humble opinion.

Source record: 102788

Does anyone know any mods, undocumented features, etc for the Icom IC-F4SR SRBR/PMR446 radio?

In particular, is it possible to overocme the 500mW ERP limit?

I belive the radio is a modified IC-F4S, which is a 4W ERP unit. I believe the limited power on the SRBR/PMR446 verion is achieved by replacing the normal aerial with an intergral aerial, complete with dummy load to reduce the ERP.

Is the only option to 'replace' the aerial? If so, can this be done?

Hi All,

I have 2 Motorola amplified speaker, model numbers SSN2005A and PSN1001A.
The SSN speaker needs to have the connector put on as it currently doesn't have
one installed, the PSN is complete. I don't know what radio they are for, you
will need to figure that one out. I am lookign for any fair price. Please
reply VIA E-Mail.

Thanx

2023. Icom IC-F4SR Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-26 00:00:00 UTC
From: pstretch@my-deja.com
Message-ID: <7ni1r2$k45$1@nnrp1.deja.com>
Source record: 102804

Does anyone know any mods, undocumented features, etc for the Icom IC-F4SR SRBR/PMR446 radio?

In particular, is it possible to overocme the 500mW ERP limit?

I belive the radio is a modified IC-F4S, which is a 4W ERP unit. I believe the limited power on the SRBR/PMR446 verion is achieved by replacing the normal aerial with an intergral aerial, complete with dummy load to reduce the ERP.

Is the only option to 'replace' the aerial? If so, can this be done?

>
>Thanks
>
>Larry

If you enjoy swl'ing, you might want to make sure the 707 allows a 6 mhz bandwidth for AM stations -- if you're listening through the narrower SSB filter, you won't get much fidelity on the AM stations.

I suspect it's a good rig -- it just doesn't have all the bells & whistles.

Also, it has less in the way of devices to handle qrm -- no notch or passband tuning -- but for general hamming, it probably does okay.

You might subscribe to QST at their web site, and look up their review on the 707...

(I've had an Icom 735 for many years, and it has a hot receiver in it; would imagine the 707 would be comparable.)

2026. strange RF feedback problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-26 00:00:00 UTC
From: Hamish Moffatt <hamish@rising.com.au>
Message-ID: <7nht2r$1g5a$1@arachne.labyrinth.net.au>
Source record: 102807

I'm having a weird RF feedback problem of some sort and I'm hoping
some one can make suggests. I have a 2m HT connected to a commercial
brick amplifier of 30W output. On many frequencies, once the rig and
amp are keyed up, the amp stays keyed after the drive is removed,
until it is turned off; it seems to latch up.

I've seen this problem before when using a Yagi without a
balun; in this case though it's going to a 5/8 vertical instead.

It doesn't do it on all frequencies, but it does on many of interest.
The really strange part is that when the preamp in the same brick
is activated, I have no such problem! However I would usually prefer
to operate without the preamp active, since it makes me very susceptible
to the high power pager transmitters we have on 148 MHz here in VK.

Turning the preamp on while the amp is keyed sometimes causes it to
unkey; sometimes, it starts to whine audibly.

When it's being driven it uses about 5A; when it's keyed but not being
driven, it's using about 2A. Seems to cause some TVI too.

This is definately a recent development. I did reorganise some gear
but moving things to their approximate previous location didn't help
anything.

Any thoughts?

thanks,
Hamish VK3SB

On most radios you can change the repeater offset frequency.
What I do on Police freqs is set the radio for repeater function on those channels,then change the offset
so that the radio transmits in the ham band.
Ex: police 462.00 mhz offset -15.00 mhz = transmit 447.00 mhz.

2047. Turner mic mods?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-26 00:00:00 UTC
From: Robert@nospam.com
Message-ID: <Robert-ya023180002607991731150001@news.ipass.net>
Source record: 102828

Let me begin by asking that, if I'm posting on the wrong NG with this question, please point me in the right direction with whatever size shoe you wear.

I received an old Turner SSB+2 (Transistorized!) as a decorative object, but after getting my ticket, I wanted to put it to use. My only gear so far (and for a long time) is an Icom W32A HH, and I intend to use it as my occasional base rig, eventually with one of those litttle PAs that Mirage makes.

My actual question is, finally: what mods, if any, must I make to the Turner so it will interface with the Icom (other than the obvious replacement of the 1/4 inch plug)? Alta Vista search results for Turner information were sparse, I have no printed information with the mic. Ideally, I'd like to find a schematic, and some guidance on how to perform the surgery.

Thanks in advance for any information.

2052. TM-742A on 800 MHz

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-26 00:00:00 UTC
From: Charles Lamb <clambmd@roanoke.infi.net>
Message-ID: <379CF212.591C@roanoke.infi.net>
Source record: 102833

Does anyone know whether the TM-742A will receive 800-990 MHz like the TM-741 will? A simple mod to the 440 module allows the 741 to function quite well in this regard. But the "MHZ" key which is specified to toggle between 440 and 800 on the 741 is changed in function and position on the 742. Any help would be appreciated.

Please delete the prefix "foil" in the email address to reply directly.

Thanks,

Charlie

Folks -

Have a very nice light-use Kenwood TS-940SAT. Interested in
trading toward a Yaesu FT-920.

Toy-time calls; time to play w/some new buttons'n'dials :-)

This TS-940SAT rig:
- was not used heavily or in contesting;
- was dustcovered (short-term) or boxed (longer term)
when not in use;
- was used by nonsmoker;
- was in a temperature-controlled environment (not "garage");
- often just used as GC rcvr while I lived in apartments;
- has built-in antenna tuner but just stock filters.

If any interest in such a trade, please email me directly at

wiese [AT] jps [DOT] net

[I should also add that "very nice" means that the
front panel, top and side and rear panels all look
new - or close enough I can't tell. There is some
minor wear on bottom of plastic feet, and a few wear
marks on the bottom panel of the rig from where it sat.

Also, just to add, this rig has no voice synthesizer.
I'm not sure anyone's really crazy about such an
option anyway.]

2057. Jacksonville Sailboat Cruise for ham Help!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-27 00:00:00 UTC
From: Robert Doty <rdoty@gte.net>
Message-ID: <379E1D85.1005FF5@gte.net>
Source record: 102638

I want to thank everybody in this group who has taken the time to respond to my original message...please keep the responses coming...they're VERY helpful!

A few people have suggested one particularly good idea that I'd like to pose to the group. I am a complete novice to this ham radio stuff, and I really, really want to learn. I'd like to find a ham operator in Jacksonville, Florida who would be willing to work with me and a couple of friends...show us the equipment, wow us with cool stuff, show me how to receive e-mail via the radio, etc. Basically, just give us a tour and some motivation for learning this Morse Code stuff! ;-)

In exchange, we'll take the ham operator and his/her family out for a day sail aboard my 38' Hans Christian! (pictures available at http://home1.gte.net/rdoty).

So what say you? Any takers?

I have no way of finding hams in Jacksonville other than the Internet. Would it be possible for some of the hams who read this message to spread the word around via radio about my offer?

Thanks!

-Robert

I have an as new Icom dual band ht with several included options. This ht is in perfect condition and is a 10 out of a 10 functionally and cosmetically. This ht has a detachable microphone which will let you use it as a digital speaker microphone. The Z1A has an alphanumeric memory display, alphanumeric message and paging, backlit keypad, independent tuning knobs plus many other features. This ht has an extended receive from the factory and there are many modifications that can be done to enhance this radios capabilities. I am selling this ht with two Icom BP-180 Ni-cad battery packs which are both in excellent condition, two new Maha MH-BP-180 Ni-MH battery packs which were bought at Dayton, Icom BP-170 AA battery case, BC-79 rapid charger, CP-12 Cigarette lighter cable with noise filter, HM-46 speaker microphone, new Radio Shack vox headset which was also bought at Dayton, soft case for the ht and a Comet tri-band high performance rubber duck. I am the original owner and have the boxes, owners manual, sales brochure and all of the standard accessories that came with the unit.
$300.00 for the entire package.

Bought the new 706MkIIG and put it on line for Field Day. Solid performer, no hiccups. Ran it from 20m-70cm from an old R5. It heard 40 solid, but alas, no way to work it. Should have put up a wire! Opinions from the operators were all in the general area of "I gotta get me one of these!" If they do, some dealer, somewhere will be a very happy dealer!

Message-ID: <Qsun3.338$123.3193@newsfeed.slurp.net>
Source record: 102648

Hi, I must be nuts, to be looking for one of these... 25 years or so ago I had a portable power unit that a mobile CB radio could be mounted in that Radio Shack sold. It was brown metal and housed 8 D or C cell batteries, had a built in ant and a battery power meter I think. If any one out there has a 1973/74 RS catalog and can tell me what the catalog number was for the item and how much it sold for I'd love the info. A fax or scan of the page would be even better.

But best of all would be if someone out there had one they'd like to part with.

I want it to power a .5 watt 2/70 meter rig for cross-band repeating in the woods during hunting season.

If anyone knows the item I'm looking for and knows of a similar available item I am interested in it as well.

2075. FT8500:2 Meter Flashing Display

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-27 00:00:00 UTC
From: Terry Crissman <tcrissman@simplynet.net>
Message-ID: <uD7n3.993$QE1.33674@dfiatx1-snr1.gtei.net>
Source record: 102698

My Yaesu FT8500 seems to have a problem with the 2 meter display. The 2 meter frequency display constantly flashes as if the squelch were open. Have any of you 8500 owners experienced this? If so, how did you fix it? It may be time for another trip to Yaesu. Thanks

Terry

Source record: 102699

this radio is like the FT-100 HF/6/2/70cm radio they came out with. Lots of bugs and radios dying very quickly. Yaesu just wanted to release it in time to compete with The Icom 706 Mk 2G . I feel they knew it was lemon but said"SHIP IT"
My 2 cents, Tim

Lesse....grounded helicopters, lots of the wrong high tech
equipment, weird missions, no practice ammo. Sounds like
the US Army to me!

Can't help with the HF, but here's my 2 cents on the UHF
repeater you want:

To do a "real" repeater, that is within the same band, RX
and TX at the same time, you need a duplexer. This is a set
of filters to keep the transmit signal from swamping the
receiver. Without the duplexer, even if you move the
antennas apart, the TX will desense the RX, and it won't
work well.

I'd suggest either getting a 2M handheld and setting up a
2M/440 rig as a cross-band repeater, or using a
voice-record-playback setup to build a "simplex repeater"

for UHF. The advantage of the simplex is that you don't
need much gear, but the disadvantages are that everything
takes twice as long to communicate, and you can't have more
than one repeater.

Just random thoughts

2081. Sailboat ham questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-27 00:00:00 UTC
From: Robert Doty <rdoty@gte.net>
Message-ID: <379D3C73.CB27DE91@gte.net>
Source record: 102704

Hello!

I'm BRAND NEW to all this, so I ask your forgiveness for my naï¿½ve questions. Here's the story:

I'm 29 years old and live aboard a 38' Hans Christian sailboat (www.home1.gte/rdoty). I am COMPLETELY into the sailing scene, and I hope to be retired in seven years and do some serious long-range cruising.

One of my concerns is communications. I want to have the ability to communicate with friends and family while I'm gone. I'm thinking that ham radio might be the ticket that I'm looking for, so I've decided to get a technician no-code license in Jacksonville, Florida (where I live).

Here are my questions:

1. What equipment is best to use aboard a sailboat? Everything else on a sailboat is made for the marine environment (which is harsh, harsh, harsh). I need equipment that is well made and can survive the salt air. I also want to make sure that the equipment will allow me to communicate all over the worldï¿½I'm interested in talking with hams all over.

2. I want the ability to attach my computer (laptop) to the ham equipment. Anything in particular I should look for? Specifically, I'm looking to send/receive e-mail. Ideally, I'd like the ability to surf the net (or at least FTP to various sites).

3. This sounds silly, but it's a real problem for me. The previous owners of my boat had a SSB radio on board (since removed), and there is a ton of wiring on board (to all of the through-hulls), that I don't particularly want to replicate. I'd rather use what's already in place. Yet, I want the radio in my salon (not near the companionway, which is where the wiring is). Is it possible to have a remote control for the radio that will span about 15 feet?

4. My mast is 57 feet tall, and the backstay (braided metal cable) is about 63 feet long. If I use this as my antenna, will I be limited in any way? If so, is there a work-around?

Well, I guess that's about it! I would really appreciate some help.

Thanks!

-Robert

Source record: 102710

I am contemplating purchasing the FT-8100R. Aside from use on the
two allocated amateur bands, i shall be using the radio to receive
frequencies in the VHF-High band that have been assigned
to railway operations in North America.
These are between 159.810 and 161.565 Mhz at 0.15 intervals.
Is there somebody on the list who has used this radio, for this
purpose and can they perhaps advise the quality of reception on those
frequencies, say as compared to a top of the line Uniden scanner.
Antenna shall be a half wave dual band Larsen mag mount.

2088. Re: TM-742A on 800 MHz

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-27 00:00:00 UTC
From: va3uxb@home.com
Message-ID: <49in3.11271$um6.135227@news2.rdc1.on.home.com>
Source record: 102711

My 742 receives 800 - 900 MHz with no problem. Pressing and holding the MHz key does the trick. However, not all 742's can do it. I forget what the serial number is, but later models have a different CPU which will not do it. As far as the 70cm module, it's the same module whether in the 741 or 742. There was a mod I performed on the radio which allowed it to go to 800 MHz, then I had to add another antenna jack to the 70cm module. When I had the radio in my car, I used a simple cellphone antenna for 800MHz scanning, and it worked perfectly for listening to the police and the cellphones.

I think the mod on the radio was the MARS/CAP mod, that also allowed 800MHz receive. Try www.qrz.com, they have a link to their radio modifications archives with all the 742 mods there.

73 and good luck.

-Stephanie VA3UXB

>Does anyone know whether the TM-742A will receive 800-990 MHz like the
>TM-741 will? A simple mod to the 440 module allows the 741 to function

R392 = $200
+
UPS ground shipping for 70 LBS or so from NJ 07747 if absolutely necessary

WOULD PREFER LOCAL PICKUP VERY MUCH to SHIPPING as UPS does mishandle and
break stuff.

RX is in MINT condition , original METER everything
with excellent sensitivity and all original tubes ,
it has been carefully realigned,

if you need more information about R392, please look at
http://www.connix.com/~provero/r392/r392.html (not related)

I also have ANOTHER R392 which is 7/10 , with a nonoriginal meter and knobs,
3 bands not working due to 2 missing slugs in RF deck
:- $120

ALSO, the following items are for sale:-

COLLINS R390a : VERY GOOD CONDITION, very very sensitive and selective , has
4 mechanical filters , original meters $400
COLLINS R390 : Excellent condition very very sensitive and selective ,
original meters, new tubes and barreter 3Tf7 $400

HALLICRAFTERS S40b - very good condition $75 (recapped)
Hallicrafters S38B : Excellent condition : $50

Need to sell due to moving, would prefer local pickup in NJ.

Sounds like the thing I've read about government employees ordering
new computers -- by the time the pcs come in, they're obsolete, if
they ever arrive at all.

I've heard the ft-100 can be modified to transmit anywhere on the hf
bands, up to 30 mhz, but whether it can do the same between 30 and 88
mhz, I don't know.

There is a web site somewhere for icom-706 mods... and I believe there
is also a mail list or newsgroup or whatever for the ft-100... maybe
someone else here knows where.

The question is, even if you make the mods and they work, whether the
performance will be worth a darn... these are highly compromised radio
designs, at best, even on the ham bands...

Bob

I've listened up there before and no problem at all.
With a mod you can transmit there too.

> no-code license

Hi, Robert -
If you want reliable, hassle-free communications with specific
people, you want a satellite communications telephone. Ham radio's
great for chatting with folks, but I doubt it'll fit your needs.
First, a tech license lets you use VHF bands (and up). These are
NOT world-spanning communications frequencies. Typical range is
30-100 miles or so (longer-range methods like EME are not feasible
on a sailboat). You'll get longer distances if you learn Morse code,
earn a General class license, and operate on HF bands. You'll find
HF is not reliable when you *really* want to get that call in
to Aunt Mildred. It takes a lot of effort and practice to figure
out what frequencies will get to a specific destination on any
given day.

> 1. What equipment is best to use aboard a sailboat? Everything else on
> a sailboat is made for the marine environment (which is harsh, harsh,

Sorry - I've no clue there.

> I also want to make sure that the equipment will allow me to
> communicate all over the worldï¿½I'm interested in talking with hams all
> over.

That's HF you're talking about now. Learn some Morse Code, dude!

> 2. I want the ability to attach my computer (laptop) to the ham
> equipment. Anything in particular I should look for? Specifically, I'm
> looking to send/receive e-mail. Ideally, I'd like the ability to surf
> the net (or at least FTP to various sites).

Sorry - hams are not allowed to use their frequencies for general Internet
gateways. Web surfing will not be possible, and FTP only for specific
files made available on packet stations (generally packet-related files).

You may be able to use VHF packet radio to send and receive email, with
significant limitations: (i) you have to be within VHF range of a packet
radio station capable of relaying for you (max maybe 30-50 miles), (ii)

only hams can actually *transmit* messages over the air. Unless your Aunt Mildred gets a license, her return messages won't be sent out via radio.

> 3. ... Is it possible to have a remote control
> for the radio that will span about 15 feet?

Yes, some rigs have removable "faceplates" on extension cables. I dunno how long those cables are, however. Someone else will pipe up, no doubt.

> 4. My mast is 57 feet tall, and the backstay (braided metal cable) is
> about 63 feet long. If I use this as my antenna, will I be limited in
> any way? If so, is there a work-around?

Those dimensions are reasonable for an HF antenna, though I don't know anything about rigging a shipboard ham antenna. Hopefully someone else will tell you. If you end up using VHF frequencies, the antennas will be separate - just 19 or so inches of antenna erected somewhere with some sort of ground-plane.

Good luck, and I sure am envious!

1) Sony ICF-SW100 w/acc., no box - $200 shipped FEDEX CONUS COD
Discount for local pickup - $190
2) Johnson Viking Adventurer - FREE - LOCAL PICKUP ONLY
Only good for parts - rescued from previous owner who left in shed
3) Heathkit VF-1 - FREE - LOCAL PICKUP ONLY
Only good for parts - rescued from previous owner who left in shed

Will swap item 1 for QRP gear.

Items 2 & 3 above are "First Come, First Served". They where part of my
original Novice station that I operated 22+ years ago. I rescued them from
the previous owner who had left them in a shed and they have suffered
exposure damage. I had plans to restore them, but just do not have the time.
The Adventurer cabinet has some modifications that was done by the origianl
builder (of whom I do not know). Not sure the cabinet is worth restoring.

Hello. I have about 150ft of Radio Shack RG-58 cable for sale. It comes in 4 sections and each section has a PL-259 connector at each end. New, this would cost you $45 plus tax and a trip to Radio Shack. My price is $20 shipped USPS Priority Mail. For a long time I used this coax on my HF/VHF set-ups and it worked great. Would also be good for doing tests, Field Day, or mobile operation. Very lightweight, and very bendable. I think it will handle around 750w PEP or so. Let me know if your interested. Thanks for reading!

2104. FS: MFJ-969 HF/6M Rollar Inductor Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-27 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <4Mmn3.212$SW6.4545@iad-read.news.verio.net>
Source record: 102727

Hello. I have a MFJ-969 roller inductor antenna tuner for sale. This tuner has outputs for 2 coaxes and a balanced wire/wire. Built in 300w dummy load and 4:1 balun. Will handle 300w PEP and meter measures forward/reflected power and SWR at the same time. Power can be viewed by peak or average (selectable) and it will tune continuously from 1.8-60 MHz.

This tuner is great! Very compact/lightweight and will tune most anything (a very good choice for Field Day). Loads a CB vertical on 40m and a Radio Shack Discone on 17m! It works 100% and is a 9+ cosmetically. Have a printed copy of the manual and I believe that I have the box also. Price is $145 shipped (would cost you around $195 shipped new). Will also enclose a 5ft piece of coax for free. Thanks for reading, and let me know if your interested.

Hi Tom!

Had an Icom 735 for about 10 years before lightning took it out. Great receiver, 100% duty cycle transmitter. Ran SSTV at full output for several years and had no problem. If you can match it with an SM 8 microphone, it will sound great. Replaced with an IC 756, but still like the 735!

If you're willing to put in some effort and money, I think most of your goals can be reasonably achieved.

There are MANY cruisers on the open ocean who routinely use ham radio for both their cruising group net as well as to email back home!

I recommed a book called "Mariner's Guide to Single Sideband" by Frederick Graves.

I also recommend you contact shop specializing in solving exactly your problem, called HF On Board at http://www.hfradio.com/

If the radio is kept dry and is used routinely (to keep the insides dried out), most quality brands of HF radios should serve you well. I might lean towards the models designed for "mobile" operation, since they are designed to take more physical abuse and survive.

I wouldn't worry about ham VHF capability like 2m or 440MHz. These are by far for "landlubbers". Stick with a good HF-only radio. Besides, it'll be a LOT cheaper!

Good luck to you!

Assuming the rig is in good physical and electrical shape then
the rig isn't "too" bad. On SSB/CW there's PLL spurs most noticeable
on 6, less on 2, and not very noticeable on 432. On FM it's not very
noticeable.
The receive portions of the 2, 432 modules could use ~ 10dB more gain,
the 6 meter module is about right. I did change the RF Amps/Mixers to
3SK124
devices which greatly improved performance.

The satellite module is great, but never used it much except for
checking
band conditions quickly.

The 10W Xmit is fine for driving TE Systems RF Linear Amps.

The features I added to improve performance was "Hang AGC" and "Delayed
Xmit" for use with the Linears. See my Web Page for circuits at;

http://www.imaxx.net/~kd9jq

I have the following tranceivers in very nice condition & fully tested:

One Yaesu FT-212RH, mic, manual & brackets. Real clean, with box, never mobile, $130. shipped/48

One ICOM IC-28H, mic & brackets, real clean few slight scratches on top, never mobile. $110. shipped/48

These are plug'nplay. I never smoked ! (the mics are clean of cookies & lunch) ready to go.

2129. Re: IC- 706 vs FT-100 for military use

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-28 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <379F62BD.3D9F3DB2@erols.com>
Source record: 102602

Don't think either will work the wide-band FM from 30-88 MHz. Also, "new family" MIL FM uses a tone not available (included) on any civil radio, so you'd risk being incompatible with anything later than a PRC-25/77. But, I admire the idea of thinking outside the box (pardon the pop-language!!)

>Ham Radio Outlet has the complete package for about forty dollars. BUT
>RT Systems can upgrade you for a lot less:

>http://www.rtsars.com

Their website has to be one of the most useless I've seen. It's terribly out of date (they only list ADMS-1D - no mention of ADMS-1E or the VX-5), and there is no description of what the various pieces of software actually *do*. Nor any pricing info I could find (the "online catalog" link gets an "under construction" message). And no email address to send queries to.

If I had to guess how good their software was by looking at their web site, I'd never buy anything from them.

However, I actually do have ADMS-1C, and know it is very useful. What I'd like to know is whether upgrading to -1E would let me read radio data from a text file rather than typing it in by hand - and, if so, how much the upgrade would cost. No info about either of these is on the web site so far as I could find.

The ADMS-1E software for my VX-1R produces gibberish in the dtmf dialing
codes. It also gives me a error message when I try to use the merge
files option. When tyring to merge with a rdf file the error message
says To use an rdf file only.
I would stick with what you have or try to find the ADMS 1D instead.
I am not happy with the RT Systems product ADMS-1E.

>

ICOM equipment has a long history among maritime mobile hams, although Yaesu has built some rigs that will work in your application.

>2. I want the ability to attach my computer (laptop) to the ham
>equipment. Anything in particular I should look for? Specifically, I'm
>looking to send/receive e-mail. Ideally, I'd like the ability to surf
>the net (or at least FTP to various sites).
>

Right now I would recommend an ICOM or YAESU rig with a PK-232/DSP <http://www.timewave.com> running HF email and PK TERM '99, HF EMAIL is just being announced by creative Services Software <http://www.cssincorp.com> There are other marine packages on the development schedule so you only have to deal with one vendor who has on-line support. Important when you are here today and gone tomorrow.

>3. This sounds silly, but it's a real problem for me. The previous
>owners of my boat had a SSB radio on board (since removed), and there is

>a ton of wiring on board (to all of the through-hulls), that I don't

>place. Yet, I want the radio in my salon (not near the companionway,
>which is where the wiring is). Is it possible to have a remote control
>for the radio that will span about 15 feet?
>
The Yaesu FT-900 has a remote head kit that works well, The front panel can be bulkhead mounted in the nav station with the radio remote. Be sure you have a good remote tuner located close to the antenna.

>4. My mast is 57 feet tall, and the backstay (braided metal cable) is
>about 63 feet long. If I use this as my antenna, will I be limited in
>any way? If so, is there a work-around?

Well here we go again, sailing is never cheap. I would recommend an insulated backstay for your boat, with an SCG tuner is about the best setup I've used. Avoid raising a dipole, An extra long wire aloft is all you need if you run into a bit of heavy weather. I've tried verticals aft of the backstay on the stern pulpit but they never seem to transmit will because of the lack of good ground. A copper plate on the hull below the waterline improves this somewhat, But the insulated backstay is about the best choice.

>
>Well, I guess that's about it! I would really appreciate some help.

The most knowledgeable dealer I've ever dealt with is John Gregory, he runs the electronics department at West Marine's Ft. lauderdale FL store. I'd give him a call for a second opinion.

lastly, be sure to include Farley Mowatt's "Boat that wouldn't Float" in your ships library. It makes great reading after a good day's sale.

>I'm looking to get an older rig, and am considering:
>
>Yaesu 757GX
>Icom 735

My Icom 735 is excellent. Works well. Hot receiver. (The receiver actually is a little hotter than my JRC-525 swl receiver, which cost around $1200 in the late 80s.) Good ergonomics. Easy to tune. The control knobs on the 735 are very tight and precise-feeling. Reliable. Since '82, I've had to replace one panel light, and the main tuning knob is getting a little sticky, but that's about it. It works split frequencies -- receive on one frequency, transmit on another. Also has an extra connector on the back for a receiving antenna.

The 735 is a better base station HF rig than the newer Icom 706, so if you don't need the 706's VHF bands, the 735 is a really a good way to go.

I've never used the Kenwood 430, but most everyone I've heard running it thought highly of it.

Don't know much about the Yeasu 757, but both the 735 and 430 are solid rigs.

From: alanwaldo@aol.computer
Message-ID: <19990728043702.28736.00000713@ng-ci1.aol.com>
Source record: 102662

My ht acquired some loose dusty type trash on the LCD screen. I disassembled the unit cleaned the dust out and reassembled the unit without a hitch, almost.

Now the unit 'a' will not emit any sound from the speaker except a very low hiss. It does not matter what is being received. It will transmit and receive but I can not hear what's being recieved.

I can switch to unit 'b' and all is well. I plugged in an ear plug to the speaker jack with the same results.

CT, DT, PAGE, DUP all of that is off. I did an 'all reset' then reprogrammed my frequencies to no avail.

Tonight it did work for a few minutes. It probably did not have anything to do with it but I put it in the 'cross-band' mode and then removed it from that mode just before it went to working. Then it quit. I've tried vibration and 'gentle' bumps to see if it acts like a loose connection. I've studied the schematic and can only come up with the idea that it's being muted at ae1 and a12 when switched to 'a'. This of course hasn't been proving with a scope or anything.

Any idea's?

2167. Re: Sailboat ham questions

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-28 00:00:00 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <379EF386.BC52F978@umich.edu>
Source record: 102668

I was contacted by a shipboard radiotelephone operator who took exception to my statements that HF isn't very reliable. He uses commercial comm channels where the other end is a 50kW station (smile). Let me therefore clarify part of the posting I made, and the assumptions on which it was based:

Robert Lyons wrote:
>
> Robert Doty wrote:

> great for chatting with folks, but I doubt it'll fit your needs.

<snip...pointed out limitation on his idea of a tech license>

> You'll find
> HF is not reliable when you *really* want to get that call in
> to Aunt Mildred. It takes a lot of effort and practice to figure
> out what frequencies will get to a specific destination on any
> given day.

Yes, HF CAN be reliable, but I am guessing, Robert, that you'd like the reliability you associate with making a telephone call. It ain't that easy with ham radio. First, as I said, you need at least a General class license and HF equipment. Second, someone "back home" needs the same gear and training. Third, BOTH of you need to gain experience in choosing the proper mode/freq to make the jump. Finally, there are times and places where you simply won't get your signal through when you want. Invest in megabucks equipment back home and shipboard to minimize those times, but they still will exist. Want to call home from anywhere, any time with some semblance of reliability? Get a satellite phone.

On the other hand, if you like technology and electronics, and you have a ham back home who knows their stuff, and/or (especially) you enjoy making contacts with random hams from interesting places, get your license and join us on the air! It's a gas.

Message-ID: <379eb50c.534542@news.interlynx.net>
Source record: 102677

I am contemplating purchasing the FT-8100R. Aside from use on the
two allocated amateur bands, i shall be using the radio to receive
frequencies in the VHF-High band that have been assigned
to railway operations in North America.
These are between 159.810 and 161.565 Mhz at 0.15 intervals.
Is there somebody on the list who has used this radio, for this
purpose and can they perhaps advise the quality of reception on those
frequencies, say as compared to a top of the line Uniden scanner.
Antenna shall be a half wave dual band Larsen mag mount.

I have for sale a Motorola Radius P110 radio. It has 2 channels (1) 154.295 & (2) 154.260.
Can be programmed from 147-163 MHz I believe. It is a 5 watt unit. Battery is in great shape. Also comes with optional speaker mic. Includes new charger, radio holster, and antenna. Radio works and looks great. looks are an 8 out of 10. Need to sell because our fire dept is upgrading to a new repeater system. $200 or best offer. All offers however will be considered.
You can email me at jason@NOSPAMgulftel.net

Charles,
Thanks for the pointer; I don't think I'd have stumbled upon that site by chance.

My radio/mic combination wasn't mentioned in Shifty's main list, and the link to his other information wasn't working. I sent him e-mail, but it was returned as undeliverable.

Meanwhile, if anyone else knows of another source of guidance, please let me know .

2183. TM-741 turn on sequence problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-29 00:00:00 UTC
From: Tim <tvendt@kear.tds.net>
Message-ID: <T2Qn3.90$MQ1.45098@ratbert.tds.net>
Source record: 102534
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Greetings... I have a problem with my Kenwood TM-741 that is this.... when I turn it on, the display comes up with the word "ON" on it and then does nothing else....it just stays there. I can't turn unit off unless I unplug unit from P/S, hold down Function and MHZ and plug back in. When I do this, the full display comes up (all icons lit) and then I can shut it off. If I don't do this, I can unplug it, and then plug it in and it comes back up to the "ON" without my even hitting the on button. It did this back a few months ago but then stopped mysteriously and worked normally. Then last weekend it gagged on me again. I'm hoping someone else has had this problem and can remember what either they or Kenwood did to remedy this. TIA

Are there any serial numbers to avoid? Have there been any design changes since first being introduced? For better or worse? Are there any glitches that the Product Reviews do not mention? Is there a source on the web for this kind of info? Thanks for any info & 73, Tim

2186. Modification of AOR8200

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-29 00:00:00 UTC
From: Greg Dean <ikdean@purdue.edu>
Message-ID: <379FE13F.555BC17C@purdue.edu>
Source record: 102537
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment

I can't seem to get a good answer from Javiation
or anyone else. Can the AR8200 be modified to
scan the cellular frequencies?

How did AOR go about locking out the frequencies?

While I am at it, can the WinRadio (DSP) be modified?
It would seem that any DSP radio is nothing but programming
thus even adding new modulation schemes would be simple
(so to speak).

2187. Re: Yaesu FT-1000MP

My buddy has a brand new MP that does not sound good on AM. It is very difficult to modulate well without causing distortion. Yaesu's cure is to add accessory filters. That's not it.

Greg,

If you have the AR8200B model (sans cellular), forget it - it's hard coded
into the CPU on these models and can not be altered. And that's straight
from the factory !!

My solution to similar problem:

Take apart radio.
Unsolder one end of lithium battery.
Turn on w/ 12v, which resets CPU.
Turn off.
Resolder lithium battery.

My problem was caused by having radio on in car, and starting
engine. Musta got a spike & corrupted rig CMOS. Now, I turn off the
radio before starting engine. Previous vehicle I had no problem
for years starting with rig on.

Robert:

Find your local ham radio equipment dealer. They often have a bulletin board to post your request. They will probably also be able to help with advice.

Also, you can find ham clubs in your area at the ARRL site at http://www.arrl.org/field/club/biglist.html

Fair winds and Following Seas (and good propagation) to you!

Date: 1999-07-29 00:00:00 UTC
From: WKRK <wkrk@grove.net>
Message-ID: <rH_n3.4320$VL2.458855@news.direcpc.com>
Source record: 102551

I hope this is OK for this newsgroup. If not, then please kindly email me a message and let me know. I'm a newbie here. Thanks.

To bid on the following, go to:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=138871576

I inherited a bunch of old radio station promotional records (33 speed.. the big ones) that I understand are collectibles when I bought a radio station 4 years ago. Some of them may be of interest to you. Some of them are scratched... NOT ALL ARE In the best of shape (Honesty is always the best policy). I have never played any of these. They have been in storage for years and years. Here's the first set I'm putting up for bid:
1) Les Paul with Mary Ford - "The World is Waiting for the Sunrise" and "Whispering"
2) Perry Como - "The Twelve Days of Christmas" and "Saw Mommy Kissing Santa Claus"
3) Fred Fiebel - "Silent Night, Holy Night" and "Adeste Fideles"
4) Eddie Fisher with Hugo Winterhalter & his Orchestra - "That's What Christmas Means to Me" and "Christmas Day"
5) Gordon MacRae and the Starlighters - "Rambling Rose" and "Hair of Gold, Eyes of Blue"
6) Tommy Dorsey and His Orchestra - "Canadian Capers-Fox Trot" and "Bacarolle-Fox Trot"
7) Cowboy Copas - "Juke Box Blues" and "No More Roamin'"
8) Lily Ann Carol and the Hi-Hatters - "Raindrops" and "Lonesome and Blue"
9) Phil Harris and his Orchestra - "One More Time" and "Old Time Religion"
10) Billy Bunn and His Buddies - "(It will have to do) Until the Real Thing Comes Along" and "That's When Your Heartaches Begin"

**** I HAVE TONS MORE OF THIS KIND OF STUFF... BE WATCHING FOR MORE POSTINGS AS I GET SOME OF THESE THINGS ORGANIZED A BIT BETTER. **** Shipping and handling is $10.00 within US. An extra $10 to ship internationally. Money Order/Cashier's Check will get same day shipping. Personal Check will be held for 5 days to clear.

(This is provided as a public service, and NOT as a way to make money...)

I have in my posession a tool that is positively brilliant at loosening/removing/tightening those annoying circular "nuts" that you'll find on various Kenwood rigs. Yes, you know the ones I mean, the ones that no amount of coaxing with the tip of a screwdriver will budge.

Why on earth would you want to remove this nut, you ask? Well for most of the affected Kenwood rigs, it's the ONLY way to get to things like digital front panels, lithium batteries, and so on.

You can see a photo of the tool at:

http://www.mv.com/ipusers/innermedia/kenwood/spanner.jpg

So here's the deal:

1. Send me a postal money order (no cash or checks please) for the amount of $37.50. This covers the cost of my packaging and shipping the tool ($17.50), plus a refundable deposit of $20.

2. I then ship the tool to you via UPS ground. If you want it faster, email or call me and I'll tell you the cost.

3. You use the tool (totally at YOUR risk!!!) to open your radio, do your work, then use the tool to close it up. PLEASE DON'T BREAK OR ABUSE THE TOOL!

4. Using the same box I sent it to you in, you send the tool back to me, via whatever method you choose.

5. When I receive the tool back undamaged, I send you a check for $20, thereby refunding your deposit.

Your net cost is therefore just $17.50. That's about 1/4 of what any Kenwood service facility will charge you, and you get to control what happens.

PLEASE DON'T USE THIS AS AN OPPORTUNITY TO BUY THIS TOOL. I can tell you where to get your own, please return mine.

If you want further info about any of this, just contact me as shown below.

Thanks, and best regards all!

Neil Rosenberg

Hollis, NH 03049
(603) 465-2788
NeilR@innermedia.com

Disclaimer:

I make absolutely NO warranty as to the applicability, performance, or safety involved in using the tool I send to you. If you damage your rig, or yourself, that is totally your responsibility. If you void your warranty, that's also your problem. THINK BEFORE YOU ACT!

If the tool is not as I described it, if you chicken out, or if it doesn't fit your rig, contact me, and I'll refund your entire price (less my UPS cost) as soon as the tool is returned to me undamaged. In other words, treat me fairly, and I'll return the same.

writes

Hi,

>I can't seem to get a good answer from Javiation
>or anyone else. Can the AR8200 be modified to
>scan the cellular frequencies?

The AR8200 has continuous coverage from 500Khz - 2400MHz.

The AR8200B as distributed in the USA and has those frequencies used by
cellular in the USA "Blocked" and cannot be modified to receive those
frequencies.

We have a little more production information on the AR8200 on our web
page:

http://www.javiation.co.uk/ar8200prodinfo.html

>How did AOR go about locking out the frequencies?

CPU programming.

Anyone out there have any ideas as to my problem. I have a ft-51r and ADMS 1E (diskette is 050599 so its new software) and I can download info from my radio no problem, but when I change somethings and try to upload the info I get an err at 33% everytime without fail. Not to mention the software erased all my memories on my radio. I made a template without any problems either.

I called tech support and that was the biggest waste of time and money. I bet there's someone out there who can REALLY help me out.

I'm looking for a large vertical antenna to use with my motor home when I'm camping (and the RV is stationary). In the past, I've seen people use verticals in the 20 to 30 feet range that normally rest on top the the roof of the RV when the RV is in motion, and then swing up into action at the camp ground. Right now I'm using a high sierra, but would like to get a more effective antenna. Any ideas on the antenna and mounting hardware would be greatly appreciated. I own a Fleetwood Jamboree GT 31W.

Thanks,
Kory

I am the beneficiary of plain dumb luck I guess. Before I became a ham I hung two 4 ft cheapo shop flourescent fixtures in my office for general illumination. I have my rig there now. No problems. I did have some problems with an old 8088 riceburner XT though.

Hello kevin,

I had an FT-726R for about 2 years, It has since been replaced with an FT-847.
I liked the little rig but if you are in the market for one be sure that it
comes with all the modules you need and has the optional duplexor for
satellites. Accessories for this radio are almost impossible to find now.

It is a little under-powered, finding 10in 130 out amps is also more difficult
now. The newer amps need 25-35 watts of drive.

Hope this helps,

73

I've owned my 847 for some time now, and I say it's great. As an apartment dweller, the ATAS-100 antenna and the base-antenna addition make a real nice low-profile antenna that no one complains about. The only problem that I've had with this rig is that the auto-tuner gave out. Just sent it back and they fixed it, no problem.

Gary,
I've had my 847 for about a year now, and I can't say enough good about it.
I'm not really sure about image rejection and such, I just know it works!
I'm an apartment dewller and the 847 offers some things that make having a
small space real nice, one of the biggest is an 'all-in-one' type of rig.
As for the antenna tuner, yes - if you use their ATAS-100 antenna (by the
way, it's being offered for free with purchase of the 847). The ATAS-100 if
a 40 to 440 antenna that can be used for base and mobile.
Overall, I liked it better than the Icom 736 and 706 series.

Good Luck,
Brian

Have any of you experienced this, and if so - how was it resolved?

My HTX-404 will begin to key itself in a flickery sort of way which becomes more and more persistant until it is key-down. It will only stop when power is removed. This radio was purchased 3 years ago, and has never been used until last week.

I'm interested in a 12V 1 Amp solar panel at a rock bottom price, but reliable. Can't afford much. Does anyone have a good surplus source?

Has anyone ever developed the amorphous materials with this? I understood they were supposed to be cheap, from an article I read years ago when they first came out.

Sorry Walt, but it's a custom hand-machined part, welded and hardened. At $50 an hour, which is what a juniour machinist charges, you'll be lucky to make one for a couple of hundred dollars.

At that rate, you should just buy one from Kenwood (yes they sell them) for $80.

Honestly, this is not how I make a living. If that were the case, I'd have to live in a cardboard box.

Lighten up please. It's just a hobby.

If I understand your question correctly, aircraft use AM for voice communications.

Check out your local marine stores. West Marine etc. Shakespere and
others make a 23ft fiberglass whip for Marine SSB use. One of these
together with a SCG 230 tuner works great.

Source record: 102495

QST August has a full page ad for the Pegaus. It looks like a Kachina for $895. Has DSP filtering in the last IF. I went to the Ten Tec Page and saw the Specs on both the RX-330 and Pegasus. It appears that the Performance is the same on Recieve according to Ten Tec's own Website. SO I think Ten Tec simply put a transmitter onto the RX-330 and raised the price $550. I have a feeling it will not be nearly as good as the Kachina but I suggest waiting for the QST Review. Ten Tec has shipped the first batch of Pegasus already. The Reciever MAY be better than the rx-330 but not according to thier Web Site. WWW.TENTEC.COM

Hello. I'm interested in buying a good condition used Astron RS-35M metered power supply. All I require is that it comes with the AC cord, looks 7/10 or better, and works 100%. A manual or box wouldn't hurt but they aren't required. Let me know what you have and what you want for it. Thanks for reading!

I have an IC900 for sale with 2m, 220, 440 installed. Is in working shape, but some of the mounting brackets are missing (way it was bought). It is a very hot (sensitive) receiver especially on 2m!!

The 1st $600 takes it!
Postal money orders, or cashiers checks only.
Shipping not included.

Message-ID: <37A1BFB2.7C578A41@megsinet.net>
Source record: 102499

Has anyone out there purchased and used the SGC-2020 QRP rig? I am really fascinated with the little rig with the idea of using it in our camper and mobile. I know that it is only 20 watts max but the features, size, and low current drain really make it seem like the ideal rig for portable or mobile work.

If you have one, let me know how you like (or dislike) it.

Thanks

Tony - W9JXN

Chris, thats fine. But the majority of mod questions are "How do I fix
my FT50R now that I've tried to open the illegal cellular receive and
screwed everything up?" or "I have a ham license and I want to use my
ham radio for hamming, GMRS, and my volunteer fire job. Which wire do I
snip?" and "I drive cross country a lot and I want to use my IC-706 for
hamming and trucking..."
I'm sure you get the picture. So I send them all to the FCC and Riley
can sort it out.
Good luck on the satellites.

2280. FT625RD-whats a fair price??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-30 00:00:00 UTC
From: Ken Diaz <kenjd@email.msn.com>
Message-ID: <ebLV48r2#GA.252@cpmsnbbsa05>
Source record: 102513

Thanks for opening this.
I'm thinking of buying a Yaesu 625RD here locally very soon.
I realize there are used hf+6m rigs available for around $650 which challenge the logic of paying around $400 for the 625RD.
The 625RD that I'm looking at is a cosmetic 9.7 to 9.9 with manual.
What is a fair price for both buyer and seller on this item?
If I dont buy it, Ill try to "BIRD DOG" it to YOU.
Thanks, Ken WB9YCJ/6

Good Idea. I think the cost is a little high but its still a good idea!
You might want to redesign it for different size nut washers. It looks
like it would be handy for working on copy machines too.
I wouldn't pay any attention to some of these guys. I don't think that
they would even know what to do with your good idea. Most of these
clowns are appliance operators and theives.

Source record: 102516

Cliff,

Sounds like the cable is a resonant length on 20 meters, or it is relatively unshielded and allowing RF into the rig via this entryway. One suggestion is to lengthen, or shorten the cable to a non-resonant length. Another suggestion is to move to a new type of cable with better shielding. I once had a Yaesu HF rig which allowed RF in through its mic. cord. After I changed the mic. cable, the RF went away forever. Toroids did not help.

First things first.

1. Open the unit on all sides.

2. Verify that each connector is properly seated. This means pulling it off and reseating it.

3. Test the unit after completion.

I have had a few radios (and more than a few computers) that required this after moving them from place to place. Sometimes it works, sometimes it doesn't, but it is always worth the try, and it is free.

2292. FT-50 stock antenna

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-30 00:00:00 UTC
From: df700@torfree.net
Message-ID: <FFpEIG.226.0.sheppard@torfree.net>
Source record: 102525

I have heard talk of how the FT-50 stock antenna is bad and
recommendations of other antennas. But no one has addressed how much
these "upgrades" improve reception and transmission.

For those how have experienced this: On a scale from 1 to 10 with 5 being
the stock antenna and 1 being really bad, where would some of these
antennas rate?

You need do do a backup of your radio first to a file as a .RDF. Then you edit the file that has your radio profile. then try to reload. Do not save as a template because you cannot edit a template .TPL. Keep in touch if this works.

From: kubilai@mindspring.com
Message-ID: <37a253bd.95991188@news.mindspring.com>
Source record: 102397

I have this radio (pretty common) and I put car battery power
to it with the battery pack in also. The manual says not to do that
and I don't know if that caused my problem. I was wondering if anyone
knew a repair for this without having to send the radio in. I think
the Er1 message requires a simple reset. I would appreciate any help
I can get as I am fairly new to ham radio and want to get this radio
back up. Thanks

Chuck.

2307. TM -741 turn on problem solved

Thanks to Clif Holland, KA5IPF, owner of AVVid, a Kenwood and Icom repair facility, I was able to repair the Tm-741... I appreciate all your help.. all the things that most people suggested I had already tried, but only a experienced Kenwood tech would have known that the battery inside the body of the radio (not the display) will leak over time and actually eat away several runs going directly under it that go ultimately to the processor. After he suggested looking there, I did and sure enough, one of the runs, for about 1-2 mm, had disappeared!! I jumpered it with a piece of #38 wire and voila, it worked. Clif could've done what Kenwood told me to do and that was to send it in for repair and he would've made some money off me but he shared his knowledge with me and it saved me $$$. I guess this is what drew me to Ham Radio almost 20 years ago and it's nice to see that there are still alot of Hams out there willing to help out when needed. Thanks again Clif!!!
BTW here is Clif's e-mail address. Send along some business his way.. I know I will when I have a problem I can't fix

Hi all ... I am in Sydney Australia
i am looking to buy a KENWOOD ts-940s/sat but the problem is that the
mail costs from the U.S is simply just way too expensive.

if you have a 940S/SAT for sale and are in a position to be able to send
it at a very minimal cost then i am interested.

thanks alot.
Dj.

I have a T41 Icom handheld that the nicad pack has died on. Icom does not make this battery any more and I found out too late to buy any. What I really would like is the just the AA battery case for this. If I have to get the nicad battery, I'll do that but hopefully a case will surface. Thanks

Duke, I don't think there is a website for teh ARRL repeater directory,
but this may help: http://www.artscipub.com:80/USMAP.html

Some state repeater coordinators also have websites that list repeaters
in their area.

73,
Brian

From my experiences with the military freqs I would recommend using the SGC2000 it will cover all frequencies and when used with their tuner tunes up fine for all the HF stuff.

Steve

The designator "9236/Malayasia" has no signifigance as to part type.
This is the date code and plant of manufacture, i.e. the device you are
looking at was an MRF648 which was manufactured in Motorola's Malaysian
plant the 36th week of 1992.

Try RF Parts http://www.rfparts.com. Thye have the device in their
catalog singly and in matched pairs. They are not cheap `8^(.

Good luck on your quest.

Howdy! I'm "Mike not Mic"!
You are in contact with Tornado Alley
My call is W5OLD and all my radios smell like smoke!
Send all traffic to w5old@sonetcom.com

Ok now to the basic discription of the ALINCO 600. It's in pretty good shape and I'm not going to bother you with that One to Ten junk....it just in pretty good shape...even has all the numbers clearly on the DTMF Mic. I have the detach cable and mount to remote the faceplate. I made a flush mount for the radio's body. The power cord to the radio must be made longer if you wish to trunk mount the body of the radio. The radio does not have a built in duplexer but I have the best duplexer I could find for it. It is a Comet CF-415 it will handle 400vhf and 250uhf watts. I think the best feature of the radio is you can command it with DTMF control it in Crossband repeat from another radio IE: form a HT...change freq. as well as in and out of crossband. It is 3 level power control and fan cooled. Stereo speaker output jacks and volume/squelch seperate for both bands. Good rx audio. To top it off, all the lights work. Well thats the ball and wax. If I missed anything it's because I couldn't think of anything else.....I'm using it right now as a base and it's on a meter and working fine. I would hope it would give you years of service. But, no garrentee just good wishes to its long TX/RX'n life.

My want for it list:
1.AZDEN 2m 7400 mobile and $28.47
or
2.TENTEC 2m Kit radio and old HT.
or
3. Kenwood R2000
or
4. Kenwood 120
or
5. Two each 2m mobiles (you pickem)
or
6. Atlas 210
or
7. Get creative

Gentlemen.

It's time for some good swops.

I have many tubes from the 1920-30's, and some WEHRMACHT ,
many power triodes , radar, traveling wave,micro wave , klystrons,
magnetrons etc.etc.

Most are New In Box.

I also have many 1920-30's radios to trade with.
Some 1940-50's recievers - Hammerlund,RCA etc.

Please , let me hear what you need.
I am interested in big power triodes. > 20Watt's of plate dissipation.

- Sincerely Kurt Steffensen

American "business" at its inventive best! However, for those unable/unwilling to afford the "tool", simply grind down a pair of good quality 6" long-nose pliers, just a bit. It works first time, every time and it won't ruin the pliers for normal work!. Especially, if you're in a hurry!

Message-ID: <37A35715.A232A5F3@worldnet.att.net>
Source record: 102429

Greetings,

I have two Kenwood xcvrs, the TM-221 and the TM-421, and both
suffer from the same problem. First one side of the display
backlight went out, then the other side. Now both rigs have
no display backlighting. They work fine, but are unreadable
in the dark. This seems to be a common problem with the
TM-x21 series.

I wonder if anyone else has experience with this problem, and
hopefully knows of a fix. I have not taken either rig apart
yet, pending net advice. I refuse to send these radios
to kenwood for an obscene service charge. (I did check for
loose connectors and did not find any.)

Thanks, Dan k2UL

Replace the bulbs but I have no hands on experience on the 221 or 421.
I have worked with an FT-5200 that I replaced bulbs in for a friend of
mine and I wouldn't wish the experience on anybody else. The bulbs were
small, the circuit boards buried in the front of the radio and hard to
get to and the holes to solder into were difficult to get cleaned out.

The answer is to replace the bulbs and make sure to keep the intensity
down fairly low so the bulbs last longer.

Steve:

I am definitely interested in the 6m module for the 736. It is the only one I do not have. As 220 MHz is not an authorized band in South Africa, I will be removing the module prior to departure and that 6m module would fit nicely. Let's coordinate the details

I will be at Berryville Hamfest with a bunch of really nice items:

Kenwood TS-850S/AT 1050.00
(2) Kenwood YK-88C-1 110.00 (each)
Realistic PRO-2006 350.00
Morse Machine 3 150.00 (expanded memory chip)
Alinco 110 125.00
ICOM 27H 175.00
Astron 12A 60.00

All items are guaranteed to be top of the line (maybe not the Alinco, I'm missing the power cable}.

Look for me in the tailgate section of the fest.....

2344. NEED AM RECEIVER CIRCUIT SCHEME OR ANY IDEA FOR 118-136 MHz

Newsgroup: rec.radio.amateur.equipment
Date: 1999-07-31 00:00:00 UTC
From: nova <nova@kaunas.aiva.lt>
Message-ID: <01bdbb89$ab2cde40$87f7dbc1@www.aiva.lt>
Source record: 102435

Dear Fellows,

I need your help. I was attempt to make AM Receiver for 118-136 MHz for Voice Communications (actually necessary 120.50 MHz receiver for my handmade plane to hear tower broadcast in emergency situation when main receiver fails). But all try was failed.

I try to do receiver on TDA1220B, but it do not work well, because this IC works only on FM.

If you can please send me Receiver circuit scheme, or give me any idea or suggestion.
I'll be very thankful.

Thanks!
Nova

>Thanks in advice
>NOVA

While many replies correctly state that AM is used (at least on the normal VHF air traffic control frequencies around 120MHz), nobody has said why FM is not used (after all, it is the preferred mode for VHF mobile communications, largely because of its relative freedom from flutter). I understand that this is because the capture effect of FM (which helps give this freedom from flutter) is potentially dangerous.

Because of capture effect, a weak FM emergency message is likely to be totally wiped out by a stronger transmission on the same frequency (even if it is only slightly stronger). With AM, there is a much better chance of hearing the emergency message, even though there may be a hetrodyne beat. I presume that SSB would be better still, but only if the emergency transmission were accurately netted. However, SSB is better for normal communications (as we know), and is used for long-distance HF work because emergency calls would not normally be made on these frequencies.

Source record: 102446

Assuming you want to use the FT50 as a cross band repeater, you cannot use the radio to do that. If you want to use the radio in conjunction with a mobile radio set on crossband repeat, you can do so by putting the two meter receive frequency and the 440 transmit frequency in one memory. You can also do it by putting the 2m freq in one VFO and the 440 freq in the other VFO.
LOL

Source record: 102449
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

FS/FT
3 Transoceanic 3000-1's all 3 work all bands, none are anywhere near mint but one is in good condition the other 2 are fair. One is missing a small knob and the front cover extender the other 2 are mechanically there, one has the battery box, 2 have the log books, one has a perfect handle the other 2 have cracks all the antennas are good. There is some bubbling on one and pitting on one and minor chrome pealing on one. All need a good cleaning but should be able to make 2 fairly decent TO's out of 3. Any other questions?
Asking $225 for all three plus shipping or consider trade for Sangean 909 or Radio Shack equivalent.

Thanks

Butch
